General description	Nesta materia estudarase fundamentalmente cálculo diferencial e integral para funcións de varias variables. Para iso será necesario antes introducir certos conceptos topolóxicos e comprender as funcións de varias variables a través do seu dominio e conxuntos de nivel. O cálculo diferencial permitirá abordar conceptos como o plano tanxente e as series de Taylor, ademais de empregarse para o cálculo de extremos. O cálculo integral introducirase repasando a integración de funcións de unha variable para logo xeralizar os conceptos relacionados a funcións e varias variables.				

Study programme competences

Code	Study programme competences

Learning outcomes

Subject competencies (Learning outcomes)	Study programme competences		
Get familiar with calculus language			
To understand the main characteristics of the formulation of a mathematical problem using the tools of the infinitesimal calculus.			
To be able to evaluate the difficulty of a problem and to choose the most suitable technique among the studied ones to carry on its solution. Have a good predisposition for problem solving			
To be able to use the bibliography and the available IT tools to find the necessary information for solving a given problem			
To know the underlying geometrical meaning of the studied mathematical formalism. To be able to represent sets in the plane and in the three dimensional space using different coordinates systems			
To obtain a basic knowledge of functions of several variables: level sets, limits, continuity			
To understand the importance of partial derivatives and their relation to instantaneous variation of a magnitude (physical, chemical, economical) and to assess their utility for the correct mathematical formulation of problems in engineering			
To understand the meaning of integrals and their usage for the formulation of several problems in engineering. To know how to apply integral for the computation of areas of plane figures, areas of a surface of revolution and solid volumes.			

Contents

Topic	Sub-topic
The space R^n	The vector space R^n . Scalar product: norms and distances. Classification of points and sets. Topology of R^n : bounded set, extrema. Coordinates systems: polar, cylindrical and spherical coordinates.
Functions of several variables	Scalar and vector functions. Level sets. Continuity. Continuity in compact sets.

Differentiation of functions of several variables	<p>Directional derivative.</p> <p>Partial derivatives: properties and practical computing.</p> <p>Differential map of a function.</p> <p>Gradient, relation with partial derivatives.</p> <p>Relation between the differential map and partial derivatives: jacobian matrix.</p> <p>Higher order partial derivatives.</p>
Applications of the differentiation of functions of several variables	<p>Taylor polynomial for functions of one and several variables.</p> <p>Critical points.</p> <p>Classification: Hessian matrix.</p> <p>Constrained optimization: dimensionality reduction, Lagrange multipliers method.</p>
Integration of functions of one variable	<p>Riemann sums.</p> <p>Integrable functions.</p> <p>Integral Calculus Theorems: Mean Value Theorem, Fundamental Theorem and Barrow's rule.</p> <p>Primitive Calculus.</p> <p>Polynomial interpolation.</p> <p>Numerical integration. Compound Simpson's Rule.</p> <p>Application of integral calculus to computing arc lengths, volumes of revolution and surface areas of revolution.</p>
Integration of functions of several variables	<p>Double integrals.</p> <p>Triple integrals.</p> <p>Change of variable in double and triple integrals.</p> <p>Application of integral calculus to computing volume and mass of a solid body and its center of mass.</p>

Planning

Methodologies / tests	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	30	45	75
Problem solving	20	25	45
Objective test	6	0	6
Workshop	10	10	20
Personalized attention	4	0	4

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Guest lecture / keynote speech	The course will be developed during the regular classes where the professor will explain the main concepts and results of the subject.
Problem solving	This classes are organized in such a way that we practice how to solve the proposed problems.
Objective test	Three exams will be carried out during the course. The first one will be a partial exam where only some of the chapters will be considered. A final exam will be done at the end of the semester. Furthermore a computer exam will be carried out.
Workshop	Problems are solved assisted by the computer program Maxima.

Personalized attention

Methodologies	Description
---------------	-------------

Problem solving	The contents of the subject as well as the homework require that student work by themselves. This will generate some questions that they can ask during the classes or during the office hours.
-----------------	---

Assessment		
Methodologies	Description	Qualification
Objective test	<p>Written exams to assess the knowledge of the subject by the students. The subject will consists on three parts and the final qualification of the subject will be de addition of the quelification obtained at each of these parts</p> <p>Three exams will be performed</p> <p>1) The first one in the reserved period for the partial exams (about the beginning of November), and will involve all the chapters studied until the celebration of the exam. If the student passes this exam, the qualification is retained until the end of the present course. This part will be recoverable in the final exam (second chance), to be held in July.</p> <p>2) The second (and final) exam will be carried out in the period of final exams. It will envolve the second part of the subject and a second chance to pass the first part.</p> <p>The weight of both exams will be the 90% of the final qualification. In case of passing any of these two parts, either in the partial of november or in the final exam of january, the qualification is retained for the present course untuil the exam of second oportunity of july.</p> <p>3) The third exam will consist of a computer exam with the program MAXIMA, where the students must show their capacity for problem solving using the MAXIMA program. The weight of this third part will be the 10% of the final qualification. This part WILL NOT be recoverable, but the obtanined qualification will be kept until July.</p>	100
