Teaching Guide				
Identifying Data				**2015/16**
Subject (*)	Regulación da expresión xénica		**Code**	610441006
Study programme	Mestrado Universitario en Bioloxía Molecular , Celular e Xenética			
Descriptors				
Cycle	**Period**	**Year**	**Type**	**Credits**
Official Master's Degree	1st four-month period	First	Obligatoria	3
Language	SpanishEnglish			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía Celular e Molecular			
Coordinador	Freire Picos, María Ángeles	**E-mail**	maria.freirep@udc.es	
Lecturers	Cerdan Villanueva, Maria Esperanza	**E-mail**	esper.cerdan@udc.es	
	Freire Picos, María Ángeles		maria.freirep@udc.es	
Web	ciencias.udc.es/bcm			
General description	This course is focussed on the mechanisms of gene expression regulation in the nucleous and the cytoplasm as well as the cellular machineries involved in those processes.			

Study programme competences / results	
Code	**Study programme competences / results**
A1	Skills of using usual techniques and instruments in the cellular, biological and molecular research: that are able to use techniques and instruments as well as understanding potentials of their uses and applications.
A2	Skills of working in a sure way in the laboratories knowing operation handbooks and actions to avoid incidents of risk.
A3	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A5	Skills of understanding the microorganisms' role as pathogenic agents and as biotechnological tools.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A9	Skills of understanding the structure and dynamics of proteins to individual and proteomic level, as well as the techniques that are necessary to analyze them and to study their interactions with other biomolecules.
A10	Skills of modifying genes, proteins and chromosomes with biotechnological applications
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
A13	Skills to become a professional in health, pharmacy, veterinary, animal production, biotechnology or food sectors.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B2	Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of biological problems and the looking for solutions.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions and to prepare reasoned reports on scientific and biotechnological questions
B5	Correct oral and written communication on scientific topics in the native language and at least in another International diffusion language.
B6	Skills of team work: that are able to keep efficient interpersonal relationships in an interdisciplinary and international work context, with respect for the cultural diversity.
B9	Skills of preparation, show and defense of a work.
C3	Skills of Using basic tools of the information technologies and communications (ICT) necessary to the exercise of his profession and for the apprenticeship over his life.
C8	Considering the importance that the investigation has, the innovation and the technological development in the socioeconomic advance and cultural of the society.

Learning outcomes	
Learning outcomes	**Study programme competences / results**

	AR1	BR1	CC3
Skills of make presentations regarding the actual knowledge state in the field.	AR1	BR1	CC3
Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability	AR2 AR3	BR2 BR3	CC8
Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics	AR5	BR5	
Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability	AR6 AR9	BR6 BR9	
Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of biological problems and the looking for solutions.	AR10 AR11 AR13		
.-Skills to be critical with the results and the hypothesis as well as evaluation and interpretation of results .	AR13	BR1 BR2	CC8

Contents	
Topic	Sub-topic
Topic 1	Introduction to techniques and methodology to study the regulation of gene expression.
Topic 2	The transcriptional machinery in eukaryotes. Transcripcional general factors (TFII) and TAFs. The mediator complex and the complex SRB10 kinase.
Topic 3	The complexes that remodel chromatin. ATP-hydrolyzing complexes. SWI/SNF and ISWI complexes.
Topic 4	SAGA complex and counterparts. Acetylation and regulation of gene expression: HATs. The gene repression processes and deacetylation. The repression mechanisms of gene methylation.
Topic 5	Specific transcripcion factors. The signaling cascades and specific transcription factors. Nuclear receptors and transcriptional control.
Topic 6	New concepts in the regulation of gene expression. Transcripcion factories and other models.
Topic 7	RNA processing and nucleous-cytoplasm transport: the machinery of RNA cleavaje and polyadenylation, transport across the Nuclear Pore Complex and factors involved. Cytosolic polyadenylation.
Topic 8	RNA secondary structures and protein-factors with RNA-binding domains in the regulation of mRNA levels. mRNA stability.
Topic 9	RNA and protein translation. Local protein translation. The 3´-UTRs in the translation efficiency process. RNA Editing.
Topic 10	micro and siRNAs in the regulation of Gene Expression: basic and applied aspects.

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Seminar	A5 A6 A9 A10 A11 B3 B5 B6 B9 C3 C8	3	6	9
Laboratory practice	A1 A2 A3 B1 B2	10	20	30
Guest lecture / keynote speech	A5 A6 A9 A10 A11	10	14	24
Problem solving	A13 B1 B2	3	6	9
Objective test	A5 A6 A9 A10 A11 A13	2	0	2
Personalized attention		1	0	1
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	**Description**
Seminar	The students will prepare a scientific presentation about a subject related to the mechanisms of gene expression regulation and will present it to the class. The presentation will be followed by a debate.
Laboratory practice	Experimental work in the laboratory about genetic engineering and gene expression analysis.
Guest lecture / keynote speech	Magister lectures about the principal topics of the learning program
Problem solving	Learning based on problem solving. The students will have to solve a problem with the aid of previous information about the subject.
Objective test	The exam will include questions based in multiple option selection and also problems. This will allow to modulate the final qualification of each student

Personalized attention	
Methodologies	**Description**
Seminar Laboratory practice Problem solving	Students will be oriented before and during the preparation of seminars and the development of the practical course. They will involve interpretation of results. The problems and case solving will also need an orientation from the teachers. Titotial schedules: Pfra. Esperanza Cerdán Tuesday, wednesday and Thursday from 12.30 to 14.30 Pfra. Mª Angeles Freire Monday 13-15 or previous appointment by e-mail. Some doubts may also be solved directly by e-mail.

Assessment			
Methodologies	**Competencies / Results**	**Description**	**Qualification**
Seminar	A5 A6 A9 A10 A11 B3 B5 B6 B9 C3 C8	Students give their peers a seminar about sppecific aspects of work of other scientists on an issue related to regulation of gene expression. Half-presential students will have a specific activity combining the seminar contents and the problem solving	15
Laboratory practice	A1 A2 A3 B1 B2	The collection and management of information from databases and scientific suits available on the web. A practical case will be carried out by students. It will also be a laboratory session focussed on a transcriptional regulation experiment.	25
Guest lecture / keynote speech	A5 A6 A9 A10 A11	Althought the theorethical knowledges will be teached and ellaborated in magister clases, we will take into consideration the assistence to the theorethical clases and the student´s participation.	10
Problem solving	A13 B1 B2	We will present problems on different subjects related with the gene expression regulation to verify if the students are able to use the infomation that was given to them, or other that they find, in order to solve them. Half-presential students will have a specific activity combining the seminar contents and the problem solving	25
Objective test	A5 A6 A9 A10 A11 A13	It will consist in an exam that may include multiple answer questions, or case solving and will allow to mudulate the student final evaluation note.	25

Assessment comments

Half-presential students will have a specific activity combining the seminar contents and the problem solving (40%)
