Identifying Data				2015/16
Subject (*)	Profundización en Química Analítica		Code	610509001
Study programme	Mestrado en Investigación Química e Química Industrial			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Obligatoria	3
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Química Analítica			
Coordinador		E-mail		
Lecturers	Carlosena Zubieta, Alatzne Muniategui Lorenzo, Soledad	E-mail	alatzne.carlosena@udc.es soledad.muniategui@udc.es	
Web				
General description	The aim of this course is the acquisition of a complete and integrated training of analytical methods along the entire analytical process including the study of methods for sampling, sample preparation, determination of analytes and treatment and interpretation of results. For this will be explained to the students an overview of analytical methods and their selection and application to solving real problems. This subject is key in the module of Advanced Training Obligatory as they complete the study of analytical chemistry taught in the Degree in Chemistry.			

Study programme competences	
Code	Study programme competences
A1	Define concepts, principles, theories and specialized facts of different areas of chemistry.
A2	Suggest alternatives for solving complex chemical problems related to the different areas of chemistry.
A4	Innovate in the methods of synthesis and chemical analysis related to the different areas of chemistry
B1	Possess knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often within a research context
B2	Students should apply their knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study.
B4	Students should be able to communicate their conclusions, and the knowledge and the reasons that support them to specialists and non-specialists in a clear and unambiguous manner
B5	Students must possess learning skills to allow them to continue studying in a way that will have to be largely self-directed or autonomous.
B7	Identify information from scientific literature by using appropriate channels and integrate such information to raise and contextualize a research topic
B10	Use of scientific terminology in English to explain the experimental results in the context of the chemical profession
B11	Apply correctly the new technologies to gather and organize the information to solve problems in the professional activity.

Learning outcomes			
Learning outcomes	Study programme competences		
Acquire a complete and integrated training of analytical methods used throughout the analytical process including the study of methods for sampling, sample preparation, determination of analytes, and processing and interpretation of results.	AC1	BC1 BC2 BC5 BC10	
Overview of analytical methods and their selection and application to solving real problems.	AC2 AC4	BC4 BC7 BC11	

Contents	
Topic	Sub-topic
Topic 1	Trends in Analytical Chemistry.
Topic 2	Automation and miniaturization in Analytical Chemistry
Topic 3	Optimization and validation of analytical methods through chemometrics.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A1 B1 B5 B10	16	24	40
Seminar	A2 A4 B2 B4 B7 B11	8	24	32
Mixed objective/subjective test	A1 A2 B1 B2 B4	2	0	2
Personalized attention		1	0	1
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	The teacher will present the fundamental contents of each of the topics. For better learning, students will have teaching materials suitable for your personal preparation. All students can consult the teacher any aspect of the matter in the tutorial schedule established for this purpose. He taught in face classes.
Seminar	In the seminars the teacher will be clarified some issues addressed in the classroom, especially related to the practical application of the methodologies used. Students should develop, deliver and present work and in the corresponding session as presented and discussed about it. Students who have particular difficulty with the contents should contact the teacher to receive the necessary support. They are sessions. He taught in face classes.
Mixed objective/subjective test	A final exam will be done to assess the degree of learning both the theoretical and practical.

Personalized attention	
Methodologies	Description
Seminar	Throughout the course the teacher resolves any doubts on the subject that the student needs.

Assessment			
Methodologies	Competencies	Description	Qualification
Mixed objective/subjective test	A1 A2 B1 B2 B4		0
Guest lecture / keynote speech	A1 B1 B5 B10		0
Seminar	A2 A4 B2 B4 B7 B11		0

Assessment comments
Thestudent will obtainthe qualification ofnot submittedwhen makingless than 25%of academic activitiesscheduled,andnot presentedto the jointproba.Asregardsthe successiveacademic years,theteaching-learningprocess,including continuousassessment, refers toan academic courseand, therefore,wouldcomezara new course, including allactivities and proceduresthe Assessmentthat is scheduledfor that course.
