| General description | Integrated laboratory with special emphasis on applications of the main instrumental techniques.<br>The course explores the experimental methodology of Physical Chemistry and it is intended to enable students to interpret the experimental results from the theoretical models developed in the previous course of Physical Chemistry 3. The development of critical thinking that allows integrating the theoretical experiment is a very important aspect in the overall education of a chemist. Moreover, it introduces students to the management of the most common instrumental techniques in any chemistry laboratory. |        |                                                                                           |         |

| A1                                    | Ability to use chemistry terminology, nomenclature, conventions and units                                                         |
| A5                                    | Understanding of principles of thermodynamics and its applications in chemistry                                                   |
| A14                                   | Ability to demonstrate knowledge and understanding of concepts, principles and theories in chemistry                              |
| A16                                   | Ability to source, assess and apply technical bibliographical information and data relating to chemistry                          |
| A17                                   | Ability to work safely in a chemistry laboratory (handling of materials, disposal of waste)                                       |
| A18                                   | Risk management in relation to use of chemical substances and laboratory procedures                                               |
| A19                                   | Ability to follow standard procedures and handle scientific equipment                                                             |
| A20                                   | Ability to interpret data resulting from laboratory observation and measurement                                                   |
| A21                                   | Understanding of qualitative and quantitative aspects of chemical problems                                                        |
| A22                                   | Ability to plan, design and develop projects and experiments                                                                      |
| B2                                    | Effective problem solving                                                                                                         |
| B3                                    | Application of logical, critical, creative thinking                                                                               |
| B4                                    | Working independently on own initiative                                                                                           |
| B5                                    | Teamwork and collaboration                                                                                                        |
| C1                                    | Ability to express oneself accurately in the official languages of Galicia (oral and in written)                                  |
| C3                                    | Ability to use basic information and communications technology (ICT) tools for professional purposes and learning throughout life |

| Assessment comments |
|---------------------|
|---------------------|

Attendance at all seminars and practices is compulsory for the student to pass the course.

First opportunity assessment:

Continuous evaluation of the work done by the student in the laboratory, considering the skills and knowledge, the answers to questions during the development and elaboration of the experimental data, together with the report of practices, constitute 50% of the final mark. A written test will constitute the 50% remaining.

The course is considered passed if the average of the marks obtained in the different activities reaches a minimum of 5 points out of a maximum of 10 points. To pass the course students must obtain a minimum mark of 3.5 points out of 10 in the written test. If the average is equal to or greater than 5 (out of 10) but this threshold mark was not met, the final mark will be 4.5 (fail).

The final mark could be scaled up to a maximum of 1 point as a result of the evaluation of the overall student's progression.

The qualification "not attended" will only be given to those students who do not engage in any practice session in the lab.

Second opportunity assessment:

Students who have successfully completed the lab must conduct a test in the classroom that will account for 100% of the mark.

Students who have not passed the lab are required to perform a practical test in the laboratory.

Students evaluated in the "second opportunity" will only be eligible for

Honors if the maximum number of licenses for the corresponding course

has not been fully covered in the "first opportunity"

Should it be more candidates to honors grade than licenses available, allocation of licenses could be done through an extraordinary exam.

The teaching-learning process, including assessment, refers to an academic course and, therefore, will restart as new with every new academic year, including all activities and assessment procedures scheduled for that course.

## Recommendations

### Subjects that it is recommended to have taken before

Química 4/610G01010

Química Física 3/610G01018

Laboratorio de Química/610G01032

### Subjects that are recommended to be taken simultaneously

Química Física 3/610G01018

### Subjects that continue the syllabus

Química Física Avanzada/610G01020
