| Methodologies | |
|--------------------------------|--|
| Methodologies | Description |
| Guest lecture / keynote speech | The teacher presents the main concepts that students need to solve the accounting problems covered in the course. |
| Directed discussion | Preparation and discussion in the classroom of the topics proposed by the teacher. |
| Workshop | Work in groups to solve exercises and cases, both in the classroom and out of the classroom. The teacher will guide this work. |
| Multiple-choice questions | Mid-term multiple choice test on an unspecified date. |
| Objective test | Final exam covers both theoretical and practical issues. |

| Personalized attention | |
|---------------------------------|---|
| Methodologies | Description |
| Workshop Directed discussion | <p>The accounting problems proposed to be solved in the classroom are designed to help students in understanding the accounting concepts and in becoming familiar with the accounting technique. With this aim, students will be guided by the teacher, so that they can solve, on their own, the proposed cases.</p> <p>Group tutorials (4 hours distributed along the term) will be used to discuss those complex cases that require a higher degree of personal attention. For these tutorials, the group will be split into two small groups (15 students, aprox.). If possible, group tutorials will be held either in the previous or the posterior time slot in which students have their classes.</p> |

Assessment comments

The proposed methodology seeks two main objectives: i) to create incentives for the student to work on a continuous basis along the term, and ii) to promote self-study strategies. With this aim, the student is asked to:

a) Prepare, either individually or in group, the questions designed by the teacher to be discussed in the classroom. Both the strength of the arguments used and the ability to defend them in front of the rest of the students are graded. The student can get up to 1 extra point to be added to the mark obtained in the continuous evaluation (workshop + mid-term test). The maximum final mark for the continuous evaluation is 5 points.

b) On a weekly basis, students must solve the exercises and cases proposed by the teacher. Team work is highly recommended to discuss the possible solutions. At the beginning of one of the two sessions of the week, the teacher will present a small case, similar to those designed to be solved out of the classroom. Students must solve the case individually and the teacher will collect the written solutions. At the end of the term, the teacher will choose, on a random basis, four of these written exercises to be marked.

As for the final exam, students should take into account the agreements of the Executive Committee of the Faculty of Economics and Business (6th July 2011).

Absent qualification. This qualification will be assigned, exclusively, to those students that had participated in evaluation activities with a weighting lower than 20% of the final qualification, independently of the mark obtained in these activities.

Final exam. It is forbidden to access the classroom where the exam is held with any machine that allows communication with the outside and/or the saving of information.

Evaluation in the July option. The evaluation criteria used in the first option applies also in the July option.

Finally, in the case (and just in the case) students are awarded with an extra evaluation option ("avaliación adelantada"), they should take an exam which will be designed to evaluate all competencies and contents of the course.
