

Teaching Guide

Identifying Data					2015/16	
Subject (*)	Numerical methods and programming			Code	614855201	
Study programme	Mestrado Universitario en Matemática Industrial (2013)					
Descriptors						
Cycle	Period	Year	Type	Credits		
Official Master's Degree	1st four-month period	First	Obligatoria	6		
Language	Spanish					
Teaching method	Face-to-face					
Prerequisites						
Department	Matemáticas					
Coordinador	García Rodríguez, José Antonio	E-mail	jose.garcia.rodriguez@udc.es			
Lecturers	García Rodríguez, José Antonio	E-mail	jose.garcia.rodriguez@udc.es			
Web	https://campusvirtual.udc.es/moodle/					
General description	Nesta asignatura presentanse métodos numéricos elementáais para resolver sistemas de ecuacións lineáis e non lineáis, e para aproximar funcións, as súas derivadas e integráais.					

Study programme competences / results

Code	Study programme competences / results
A4	Ser capaz de seleccionar un conjunto de técnicas numéricas, lenguajes y herramientas informáticas, adecuadas para resolver un modelo matemático.
A8	Saber adaptar, modificar e implementar herramientas de software de simulación numérica.
B1	Saber aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios, incluyendo la capacidad de integrarse en equipos multidisciplinares de I+D+i en el entorno empresarial.
B5	Poseer las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo, y poder emprender con éxito estudios de doctorado.

Learning outcomes

Learning outcomes	Study programme competences / results		
1. To know the elementary numerical methods for solving systems of linear and nonlinear equations, and to approximate a function, its derivatives and its definite integral.	AC4	BJ1	
	AC8	BR1	
2. Be able to efficiently use the calculus package MatLab for solving the problems studied in this subject.	AC4	BJ1	
	AC8	BR1	
3. Have a good predisposition for solving problems.	AC4	BJ1	
	AC8	BR1	
4. Be able to evaluate the difficulties involved in the process of solving a given problem, and taking them into account, be able to choose the more appropriate numerical method for solving it (among the studied ones).	AC4	BJ1	
	AC8	BR1	
5. Be able to look up in the bibliography, to read and to understand the necessary information for solving a given problem.	AC4	BJ1	
	AC8	BR1	

Contents

Topic	Sub-topic
Introduction to programming	1. Introduction to matlab. Commands and basic functions. 2. Vectors and matrices in Matlab. Sparse matrices. Graphical representation. 3. Files .m and programming. Data structures in Matlab. 4. Introduction to Fortran 90: data types and flow control. 5. ?Arrays? in Fortran 90. Proceedings, modules and interfaces. 6. Input/output of data in Fortran 90.

Numerical methods	<p>7. Numerical solution of linear systems: Conditioning of a system of linear equations. Direct methods: LU, LL^t, LDL^t y QR. Classical iterative methods: Jacobi, Gauss-Seidel, SOR and SSOR. Convergence tests.</p> <p>8. Numerical solution of systems of nonlinear equations: review of numerical methods for solving nonlinear equations. Fixed point iteration method. Newton method. Computational comments.</p> <p>9. Interpolation. Lagrange interpolation. Hermite interpolation. Runge effect. Approximation using splines.</p> <p>10. Numerical differentiation and integration. Numerical derivatives of polynomial interpolation type. Numerical integration in one variable. Formulas of Newton-Cotes. Gauss formulas. Compound formulas.</p> <p>11. Interpolation and numerical integration in several variables.</p>
-------------------	---

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Guest lecture / keynote speech	A4 A8 B1 B5	20	40	60
Laboratory practice	A4 A8 B5 B1	20	40	60
Supervised projects	A4 A8 B5 B1	0	20	20
Objective test	A4 A8 B1 B5	4	0	4
Personalized attention		6	0	6

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	<p>In the theoretical sessions the teacher will present the theoretical contents of the subject, using illustrative examples for motivating the students and helping the comprehension and assimilation of the contents.</p> <p>The teacher will use dynamic presentations that the students will be able to download beforehand from the virtual site of the subject in Moodle (And, if necessary, the data will be sent by e-mail).</p>
Laboratory practice	<p>During the course, several practical assignments will be proposed to the students.</p> <p>The students must implement in Matlab some of the numerical methods studied in this subject, validate their programs and prepare a report describing the developed codes. Also practical problems will be proposed using the numerical methods studied in the subject.</p> <p>All this practices will be taken into account for the final evaluation.</p>
Supervised projects	Trabajos que consisten en ejercicios correspondientes a la parte de métodos numéricos que el alumno tiene que entregar y que se evaluarán
Objective test	<p>This is the final exam of the subject, and it has two parts.</p> <p>In the first part, several theoretical exercises will be proposed relating, for example, the range of application of the studied methods and their convergence properties. In the second part, the students will solve a practical case using the studied commands and the programs developed in Matlab or, if this is the case, implementing the necessary algorithms.</p>

Personalized attention

Methodologies	Description
Laboratory practice Supervised projects	Students will be able to ask the teachers of the subject any doubt arising during problems solving and also during the implementation of the laboratory practices.

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Laboratory practice	A4 A8 B5 B1	The ability of student to solve the problems studied in the subject using the calculus package MatLab is evaluated, as well as, and their skills to efficiently implement the studied numerical methods. We also evaluate the knowledge of the students to apply the studied theoretical results.	50
Objective test	A4 A8 B1 B5	The theoretical and practical knowledges learnt by the student are evaluated.	40
Supervised projects	A4 A8 B5 B1	Se evalúan los conocimientos teóricos y de aplicación de los métodos numéricos estudiados en la asignatura	10

Other comments

To be able to understand the methods presented in this subject it is necessary to have elemental knowledge of linear algebra and differential and integral calculus. It is also recommended to study the contents developed in the subject at the time they are introduced, making the assignments and the proposed practices, and making use of the tutorials and consulting recommended bibliography.
