General description	<ol> <li>Introduction to the students in</li> <li>Study of the main features of c</li> <li>Study of information technolog</li> </ol>	current computers a	nd their interna	I function design.	
	engineering. 4 Study and effective utilization of 5 Study and use of a programmi		·	ws to solve problems	through engineering solutions.

	Study programme competences / results
Code	Study programme competences / results
A1	Skill for the resolution of the mathematical problems that can be formulated in the engineering. Aptitude for applying the knowledge on:
	linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and in partial derivatives;
	numerical methods; algorithmic numerical; statistics and optimization
A3	Basic knowledge on the use and programming of the computers, operating systems, databases and computer programs with application in
	engineering
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and
	itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates
	proceeding from the vanguard of its field of study
B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to
	prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
B4	That the students can transmit information, ideas, problems and solutions to a public as much specialized as not specialized
B5	That the students developed those skills of learning necessary to start subsequent studies with a high degree of autonomy
B6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.
C1	Using the basic tools of the technologies of the information and the communications (TIC) necessary for the exercise of its profession and
	for the learning throughout its life.
C2	Coming across for the exercise of a, cultivated open citizenship, awkward, democratic and supportive criticism, capable of analyzing the
	reality, diagnosing problems, formulating and implanting solutions based on the knowledge and orientated to the common good.
C4	Recognizing critically the knowledge, the technology and the available information to solve the problems that they must face.
C5	Assuming the importance of the learning as professional and as citizen throughout the life.
C6	Recognizing the importance that has the research, the innovation and the technological development in the socioeconomic and cultural
	advance of the society.

Learning outcomes			
Learning outcomes	Study	y progra	amme
	con	npetenc	;es /
		results	
1 Study of information technology and communications networks as well as their applications to the world of engineering.	A3	B1	C1
Effective utilization of the basic tools of all computer.			C4
			C6
2Study of information technology and communications networks as well as its main applications to the world of engineering.	A1	B1	C1
Study and effective utilization of the basic tools of all computer.	A3	B2	C2
		B4	C4
		B5	C5
		B6	C6
3 Study and use of a programming language (c language) that allows to solve problems through engineering solutions.	A1	B1	C1
	A3	B2	C4
		B5	C5
		B6	C6

	Contents
Торіс	Sub-topic
Theme 1 Fundamental concepts of computer science.	1.1 Historical background.
	1.2 Basic architecture of computers.
	1.2.1 Von Neumann architecture.
	1.2.2 CPU
	1.2.3 Memory.
	1.2.4 Input/output devices.
Theme 2 New architectures	2.1 Parallelism and Supercomputing.
	2.1 Parallelism in uniprocessor systems.
	2.1.2 Evolution of modern supercomputers
	2.2 Flynn's classification.
	2.2.1 Matrix computers.
	2.2.2 Vector computers.
	2.2.3 Multi-processor/multi-core systems.
Theme 3 Encoding of information	3.1-Encoding of information in a computer.
	3.2 Binary representation.
	3.2.1 Internal representation of the data.
	3.2.2 Whole and floating point arithmetic.
	3.2.3 Encoding of non-numerical information.
	3.2.4 Other systems of representation: Octal and Hexadecimal.
Theme 4 Operating systems.	4.1- General concepts of design and operation of an operating system.
	4.2 Microsoft operating systems: Windows vs Linux.
	4.3 Construction of the virtual machine in an operating system (coats of an operating
	system)
	4.3.1 Operating system kernel.
	4.3.2 Memory management.
	4.3.3 Management of input/output operations.
	4.3.4 File system management.
	4.3.5 Allocation of resources.

Theme 5Programming languages.	5.1 Aspects of design and implementation in a programming language.
	5.2 Classification of programming languages.
	5.3 Low level languages.
	5.4 High level languages.
	5.5 Translators: Phases of operation.
	5.5.1 Assembly language
	5.5.2 Translators: Phases of operation
	5.5.2.1 Interpreters.
	5.5.2.2 Compilers.
Theme 6 Computer networks.	6.1 Historical background.
	6.2 Classification of computer networks.
	6.3 Functions and network services.
	6.4 Network architectures.
	6.4.1 Types of network.
	6.4.2 Network protocols.
	6.5 Internet network.
	6.5.1 IP addresses.
	6.5.2 TCP/IP network protocol.
	6.5.3 Internet architecture.
	6.5.4 NET internet services.
	6.5.5 Systems and technology of network connection: ADSL, Cable, Wifi/WiMax,
	PLC, FTTH.
	6.5.6 How to measure the performance of a network.
	6.5.7 Security and encryption.
Theme 7 C programming language.	7.1 Introduction to the c language.
	7.2 Types, identifiers and operators.
	7.3 Input/output console.
	7.4 Control statements.
	7.5 Arrays and strings.
	7.6 Functions: Pass parameters by value and reference (pointers).
	7.7Structures, unions, enumerations and user-defined types.
	7.8 Sorting and searching algorithms.
	7.9 Files.
	7.10 Dynamic Data Structures

	Plannin	g		
Methodologies / tests	Competencies /	Teaching hours	Student?s personal	Total hours
	Results	(in-person & virtual)	work hours	
Guest lecture / keynote speech	A3 B1 C1 C4 C6	30	30	60
Objective test	A1 A3 B1 B2 B5 B6	3	0	3
	C1			
Laboratory practice	A1 A3 B1 B2 B4 B5	26	28	54
	B6 C1 C2 C4 C5 C6			
Supervised projects	A1 A3 B1 B2 B4 B5	0	20	20
	B6 C1 C2 C4 C5 C6			
Personalized attention		13	0	13

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description

The contents of the course will be developed both theoretically and practical in Keynote sessions.
The objective test will be divided into two parts, a theoretical part and a practical one. This test will try to check if the student
has acquired the skills set as target in this subject.
Study and use of a programming language (C language) that allows to resolve various engineering problems through
computer solutions.
In the keynote sessions and laboratory practices will be raised practical problems of greater complexity to be solved as
independent student work, both individually and in students groups. In that resolution the participation of students is
encouraged as a self-learning tool valuing their effort and their results aimed to the final evaluation of the subject.

	Personalized attention
Methodologies	Description
Supervised projects	The student will have tutorials to clarify their doubts about the themes exposed in classes, about resolution of laboratory
Guest lecture /	exercises and coursework or on any matter-related scope and approach.
keynote speech	
Laboratory practice	

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		
Supervised projects	A1 A3 B1 B2 B4 B5	In the keynote sessions and laboratory practices will be raised practical problems of	20
	B6 C1 C2 C4 C5 C6	greater complexity to be solved as independent student work, both individually and in	
		students groups. In that resolution the participation of students is encouraged as a	
		self-learning tool valuing their effort and their results with a view to the final evaluation	
		of the subject. Its realization and presentation to the teacher will be required to pass	
		the course. These practices will have a maximum value of 20 % of the final grade.	
Objective test	A1 A3 B1 B2 B5 B6	The objective test will be divided into two parts, a theoretical part and a practical one.	60
	C1	This test will try to check if the student has acquired the skills set as target in this	
		subject. It will be necessary to obtain a minimal note of 1,5 points in each part (max 3	
		points each part) and have submitted all practices and / or work in order to pass the	
		course.	
Laboratory practice	A1 A3 B1 B2 B4 B5	Study and use of a programming language (C language) that allows to resolve various	20
	B6 C1 C2 C4 C5 C6	engineering problems through computer solutions. Its realization and presentation to	
		the teacher will be required to pass the course. These practices will have a maximum	
		value of 20 % of the final grade.

Recommendations
Subjects that it is recommended to have taken before
Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
Other comments

Given that the subject is taught in the second semester of the first year of Naval and Oceanic Engineering, prior knowledge necessary to pursue this course consist of the knowledge of the subjects of Informatics taught in Scientific and technological secondary education options. If the student comes from another secondary education option is especially recommended its study to acquire a minimum knowledge bases.
