General description	Provides knowledge of General Physics required for substantiation of the laws and phenomena of chemistry. This is a					
	subject that is the link between ma	athematics and	I chemistry in the	sense of giving a forma	al formulation of scientific	
	observations that establish laws a	and results with	out which you ca	n not "close" the scienti	fic method. The laws of physics	
	provide the basic ingredients in which most sciences are supported, as well as instrumentation and measurement					
	techniques used in all scientific fields, and especially in chemistry. Hence its importance and presence in the first year of					
	the degree, since along with Physics 1 provides students with the necessary basis for understanding matters of other					
	modules and courses for the degr	ee.				

	Study programme competences / results
0	
Code	Study programme competences / results
A1	Ability to use chemistry terminology, nomenclature, conventions and units
A3	Knowledge of characteristics of the different states of matter and theories used to describe them
A12	Ability to relate macroscopic properties of matter to its microscopic structure
A14	Ability to demonstrate knowledge and understanding of concepts, principles and theories in chemistry
A15	Ability to recognise and analyse new problems and develop solution strategies
A19	Ability to follow standard procedures and handle scientific equipment
A20	Ability to interpret data resulting from laboratory observation and measurement
A22	Ability to plan, design and develop projects and experiments
A23	Critical standards of excellence in experimental technique and analysis
A24	Ability to explain chemical processes and phenomena clearly and simply
A25	Ability to recognise and analyse link between chemistry and other disciplines, and presence of chemical processes in everyday life
A27	Ability to teach chemistry and related subjects at different academic levels
B1	Learning to learn
B2	Effective problem solving
B3	Application of logical, critical, creative thinking
B4	Working independently on own initiative
B5	Teamwork and collaboration
B7	Effective workplace communication
C1	Ability to express oneself accurately in the official languages of Galicia (oral and in written)
C3	Ability to use basic information and communications technology (ICT) tools for professional purposes and learning throughout life
C6	Ability to assess critically the knowledge, technology and information available for problem solving

Learning outcomes

Learning outcomes		Study programm	
	con	npetenc	es/
		results	
Dispoñer dos fundamentos teóricos mínimos que permitan a comprensión dos aspectos da química relacionados coa	A1		C1
mecánica de fluidos e cos fenómenos eléctricos e magnéticos.			
	A12		
	A14		
	A25		
Saber reducir os problemas reais ós seus aspectos máis esenciais e aplicalos ó campo da química		B1	C1
	A15	B2	C3
	A27	B3	C6
		B4	
		B5	
		B7	
Aplicar as técnicas básicas de laboratorio, incluindo os cálculos necesarios e expresando os resultados de manera axeitada.	A19	B1	C3
Utilizar o material e aplicar as normas básicas de seguridade para traballar nun laboratorio.	A20	B2	C6
	A22	B3	
	A23	B5	
	A24	B7	

	Contents
Торіс	Sub-topic
1. Fluids	Ideal fluids
	Real fluids
	Surface phenomenon
2. Introduction to the study of the physic fields	Fields theory
	Gravitational field
3. Electricity	Electric field and potential.Capacity
	Electric current and directs current circuits
4. Magnetism	Magnetic field
	Magnetic induction
	Alternating current circuits
5. Oscillations and waves	Oscillations
	Waves motion
6. Ligth	Properties
	Interferences and difraction
Practical teaching: surface tension and density measurements	
for different methods, resistance measurement using a	
Wheatstone bridge, measurements of voltage, resistance and	
current in electrical circuits, light diffraction in a thread.

	Methodologies
Methodologies	Description
Guest lecture /	During these sessions, teacher will explain lessons including different formats (theory, problems and general examples),
keynote speech	emphasizing the more important aspects and in the more difficult ones.
Problem solving	In this sessions, some problems related to theory contents explained before will be proposed and solved. Students must solve
	this problems and questions under teacher supervision, individually or in groups. There will be included in these classes
	activities that imply the participation of the pupils, that will contribute to the continuous assessment. So teacher can observe
	the difficulties of comprehension that every pupil presents in the resolution of problems.
Laboratory practice	Students will perform laboratory practice for the application of knowledge acquired in the keynote sessions and problem
	solving. With this methodology, they acquire skills needed to work properly in a physics lab, which includes the use of
	instruments for measurement, data processing and analysis of results of physic properties and magnitudes. A guide for each
	practice will be given to the student, and they will have all necessary material to mount and do them.
Mixed	It is the test for the evaluation of knowledge, which allows teacher assessing the level of student learning.
objective/subjective	
test	

	Personalized attention
Methodologies	Description
Laboratory practice	Students will be attended individually to help them to understand and resolve all problems related with the subject they can
Problem solving	have. Moreover, teacher regularly invite students to tutorials with the intention of receiving the necessary guidance.

		Assessment	
Methodologies	Competencies / Description		
	Results		
Laboratory practice	A19 A20 A22 A23	Attendance to Laboratory practices is MANDATORY, so you cannot pass the course	15
	A24 B1 B2 B3 B5 C3	without making them. The highest mark that can be obtained is 1.5 points, and the	
	C6	minimum one required to pass them is 0.7. It will be evaluated on the basis of	
		participation and results delivery of each session, and a test that will take place during	
		the last session. Competences evaluated A19, A20, A22, A23, A24, B1, B3, B5, B7,	
		C3	
Problem solving	A14 A15 A27 B1 B2	Attendance will be evaluated (up to 0,5 points). Participation on the resolution of	15
	B3 B4 B5 B7 C1 C3	problems and exercises also will be evaluated. Teacher may periodically collect	
	C6	exercises or questions proposed during these sessions. Competences evaluated: A1,	
		A3, A12, A15, B1, B2, C1	
Mixed	A1 A3 A12 A14 A15	Examination accounts for 70% of the final grade	70
objective/subjective	A24 A25 B2 B3 C6	During the term a mid-course assesment exam will be done. Competences evaluated:	
test		A1, A3, A12, A14, A15, B2, C1.	

Assessment comments

Exam mark should not

be less than 4 (up to 10). The final mark must

be 5 or higher to pass course, and will be calculated as follows: exam mark*0.7+laboratory+problem

solving. If a student, having a final mark higher than 5, fails

the minimum mark in any activity, he/she will have a mark of 4.5, i.e., Fail.

The evaluation of students in the second opportunity will follow the same criteria as at the first opportunity. The students tested in the second

opportunity may only be eligible for honors if the maximum number of these for the corresponding course was not covered at the first opportunity. In

the July opportunity will be saved the qualifications of Laboratory and Seminars of problems.

Students which due to justified reasons or for being enrolled part-time do

not participate in the ongoing evaluation activities volunteers, may do

equivalent work , consisting of delivery during sessions of individualized

tutoring bulletins problems and activities proposed in small group sessions.

The labs will be held according to the schedule published at the beginning

of the semester. The completion is mandatory, so it is necessary to overcome to

pass the course.

For the rating of No Presented students they must not have participated in

activities totaling more than 25% of the final grade .
