General description	Development is an outstanding process of selfconstruction (and also renovation) of all multicellular organisms from the unicellular condition. This course is an optional subject in the second semester of 4th year (8th semester) in which it integrates information and biological knowledge taken in previous years. This course cover the study of the cellular basis and molecular mechanisms involved in the process of ontogenetic development of multicellular organisms, especially in the processes of differentiation and morphogenesis, emphasizing primarily in the development of metazoans.			

Study programme competences / results	
Code	Study programme competences / results
A1	Recoñecer distintos niveis de organización nos sistemas vivos.
A4	Obter, manexar, conservar e observar espécimes.
A26	Deseñar experimentos, obter información e interpretar os resultados.
A29	Impartir coñecementos de Bioloxía.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
B4	Traballar de forma autónoma con iniciativa.
B8	Sintetizar a información.
B11	Debater en público.

Learning outcomes			
Learning outcomes	Study programme competences / results		
	results		
Understand the fundamentals, processes and trends of developmental of muticellular organisms.	A1 A4 A29	B4 B8 B11	
To study the cellular and molecular mechanisms underlying developmental processes, particularly those involved in the differentiation and morphogenesis	A1 A4 A29	B4 B8 B11	
To know and be familiar with the methodologies, experimental processes, instrumentation and technical terms, based on the scientific method to the study of Developmental Biology	A26 A30 A31		

Contents	
Topic	Sub-topic

I. Concepts and Processes of Development from a historical perspective	Multicellularity, Morphogenesis and differentiation. Epigenesis vs. Preformation. Mosaic and regulative development . Induction. Ontogeny and Phylogeny.
II. Gametogenesis and the beginning of Development	Spermatogenesis. Oogenesis. Fertilization. Parthenogenesis.
III. Early Development	Segmentation Gastrulation Organization of body patterns Neurulation and neural crest Somitogenesis Extraembryonic membranes Gestation and Placentation
IV. Differentiation mechanisms and Organogenesis	Development of the nervous system and sense organs Development of muscle and the tetrapode limbs Development of the vertebrate circulatory system Development of the vertebrate urogenital system
V. Further topics of Development	Overview of plant development. Metamorphosis and regeneration Environmental interactions with animal development Developmental mechanisms in the evolutionary change
Practical lessons	Comparative study of spermatogenesis and oogenesis Studies on Planarian regeneration Observation and study of invertebrate fertilization Observation of fish and amphibian early development Observation of chick early development and organogenesis

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Introductory activities	A1	1	0	1
Guest lecture / keynote speech	A1	21	54.6	75.6
Directed discussion	A29 B4 B8 B11	7	24.5	31.5
Laboratory practice	A4 A26 A30 A31	15	15	30
Short answer questions	A1	2	8	10
Personalized attention		1	0	1

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Introductory activities	This session consists of a presentation of the subject, which sets out and explains the purpose and objectives of the subject, its structure, activities, evaluation criteria, etc ... (all contained in summary in the teaching guide) and where student can solve any queries related to them.
Guest lecture / keynote speech	Lectures last 50 minutes and will focus on those relevant topics of the course program, which the student should be read before .

Directed discussion	Each seminar session will be presented and discussed among participants about a scheduled topic. Students should prepare their own theme or part of the intended subject assigned. The professor will assist any questions that may arise along the preparation.
Laboratory practice	The practices are an essential complement to the theoretical lessons which addresses some of the processes of animal development and elaborates on some of them.
Short answer questions	The examination shall be written and consist of short answer questions of the contents treated in lectures, seminars and practical lessons.

Personalized attention

Methodologies	Description
Directed discussion	the lecturer will assign a particular topic each student within the general theme for each seminar discussion. Moreover, the student is free to discuss any concerns during the keynote sessions and practices, and also have the opportunity to resolve any questions about these subject or activities in personal tutorials

Assessment

Methodologies	Competencies / Results	Description	Qualification
Short answer questions	A1	the examination will be written and consist of short answer questions, doing schemas, definitions ...	70
Directed discussion	A29 B4 B8 B11	For each seminar session the student must give the teacher a brief one-page summary including the main ideas of the subject worked. In the seminar session, the ideas in common will be discussed among participants. Both the presentation and the discussion will be valued. The 8 seminars represent the 30 percent of the final grade (each seminar is worth 0,375 points over 10). Abstracts not presented and defended in the seminar session will not be assessed.	30
Others			

Assessment comments

<p>It is not necessary to achieve a minimum score on the topics of discussion and / or consideration for the calculation of the final grade. In the second call only the score of written exam in which knowledge derived from theoretical, practical sessions and seminars will be assessed, will be considered.</p> <p>Exceptionally, under justified reasons (part-time learning or particular learning circumstances), in case the student could not follow the assessment activities, the teacher can adopt appropriate measures aimed not to hurt their score.</p> <p>It will be considered not submitted the student who does not make the final exam based on short answer questions</p>

Recommendations

Subjects that it is recommended to have taken before

Citología/610G02007

Histología/610G02008

Bioquímica: Bioquímica I/610G02011

Bioquímica: Bioquímica II/610G02012

Xenética/610G02019

Fisiología Animal: Fisiología Animal I/610G02035

Fisiología Animal: Fisiología Animal II/610G02036

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

Assistance is recommended to all keynote sessions so as active participation in the seminars. It is very positive to consulted own before the issue to be addressed in the lectures so as to study throughout the course to strengthen knowledge and to better understand the new content that will be treated.
