

Teaching Guide

Teaching Guide				
Identifying Data				2016/17
Subject (*)	Xenómica		Code	614522006
Study programme	Mestrado Universitario en Bioinformática para Ciencias da Saúde			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Optativa	6
Language				
Teaching method	Face-to-face			
Prerequisites				
Department	Biología Celular e Molecular			
Coordinador	Vila Taboada, Marta	E-mail	marta.vila.taboada@udc.es	
Lecturers	Becerra Fernandez, Manuel Cerdan Villanueva, Maria Esperanza Vila Taboada, Marta	E-mail	manuel.becerra@udc.es esper.cerdan@udc.es marta.vila.taboada@udc.es	
Web				
General description				

Study programme competences

Code	Study programme competences
A8	CE8 - Understanding the basis of the information of the hereditary material, its transmission, analysis and evolution
A9	CE9 ? To understand the benefits and the problems associated with the sequencing and the use of biological sequences, as well as knowing the structures and techniques for their processing
B1	CB6 - Own and understand knowledge that can provide a base or opportunity to be original in the development and/or application of ideas, often in a context of research
B2	CB7 - Students should know how to apply the acquired knowledge and ability to problem solving in new environments or little known within broad (or multidisciplinary) contexts related to their field of study
B5	CB10 - Students should possess learning skills that allow them to continue studying in a way that will largely be self-directed or autonomous.
B6	CG1 -Search for and select the useful information needed to solve complex problems, driving fluently bibliographical sources for the field
B7	CG2 - Maintain and extend well-founded theoretical approaches to enable the introduction and exploitation of new and advanced technologies
B8	CG3 - Be able to work in a team, especially of interdisciplinary nature
C1	CT1 - Express oneself correctly, both orally writing, in the official languages of the autonomous community
C2	CT2 - Dominate the expression and understanding of oral and written form of a foreign language
C3	CT3 - Use the basic tools of the information technology and communications (ICT) necessary for the exercise of their profession and lifelong learning
C7	CT7 ? To maintain and establish strategies for scientific updating as a criterion for professional improvement.
C8	CT8 - Rating the importance that has the research, innovation and technological development in the socio-economic and cultural progress of society

Learning outcomes

Learning outcomes	Study programme competences		
Knowledge about the molecular tools used in genomics	AJ8 AJ9		
Knowledge about structural, functional and evolutionary genomics	AJ8	BJ1 BJ2	CJ8
To set up experiments and analyse and interpret data using DNA microarrays		BJ6 BJ7	CJ2 CJ3

Knowledge about the mechanisms involved in the evolution of genomes and the molecular and bioinformatic tools used in that kind of studies	BJ5 BJ8	CJ1 CJ7
--	------------	------------

Contents	
Topic	Sub-topic
Introduction: from Molecular Genetics to Genomics	Molecular markers Applications of recombinant DNA technologies PCR and real-time quantitative PCR DNA editing techniques
The Human Genome Project	Classic DNA sequencing methods Approaches for whole genome sequencing Next Generation Sequencing
Structural Genomics	Prokaryote and eukaryote genomes: size, gene families, repetitive DNA Organelle genomes Genome annotation and assembly
Functional Genomics	Transcriptomics
Comparative Genomics	Using model organisms in Medicine
Clinic Genomics	GWAS Molecular diagnosis
Hands on	Sequence alignment Genomic databases and projects Gene expression analysis: microchips and microarrays

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
ICT practicals	B2 B5 B8 C3	21	42	63
Mixed objective/subjective test	A8 A9 B2 C1 C2 C3	2	8	10
Guest lecture / keynote speech	A8 A9 B1 B6 B7 C1 C2 C7 C8	21	52.5	73.5
Personalized attention		3.5	0	3.5
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
ICT practicals	Hands on: students solve exercises using their own laptop.
Mixed objective/subjective test	Assessment of the learning process. Tests may include multiple choice questions, problem solving and computer exercises. Instructors will decide whether scheduling a separate test for the computer exercises depending on the progress of the group.
Guest lecture / keynote speech	Each instructor will explain the basic contents of each topic interacting as much as possible with the students.

Personalized attention	
Methodologies	Description
ICT practicals	The instructors will carefully supervise the student's work during the hands-on sessions. In the event of having officially certified "part-time" students, the instructors will take the appropriate measures so that their scores are not affected.

Assessment

Methodologies	Competencies	Description	Qualification
Guest lecture / keynote speech	A8 A9 B1 B6 B7 C1 C2 C7 C8	Students must attend at least 80% of the lecturers in order to pass the subject. Scores will depend on the result of a multiple choice test. In addition, similar calculations to the ones worked during lectures may be required.	70
ICT practicals	B2 B5 B8 C3	Students must attend at least 80% of the hands on sessions in order to pass the subject. Scores will depend on the result of an exam: students will use their own laptop to solve a set of exercises. This exam may be scheduled not to overlap with the "theory" test.	30

Assessment comments

In the event of having officially certified "part-time" students, the instructors will take the appropriate measures so that their scores are not affected.
