General description

This is an undergraduate course introduction to programming. The student will learn about the following:

- The importance of the objectives of programming;
- The general aspects of the languages and the programming paradigms;
- The pseudocode and syntax of Pascal ISO10206 language in order to be able to describe algorithms and applications;
- The steps to follow for building an application and its main components;
- The basic data types using Pascal ISO_10206;
- The control structures and the differences between them;
- All aspects related to the implementation of functions and procedures;
- Tracking an algorithm in pseudocode and the source program using Pascal ISO-10206;
- Explaining what is the output of the code and finding the potential errors;
- Solving small algorithms and programs starting from low- to moderate-difficulty problems: given the objectives of the program, to choose and use the best data types and structures, the control structures, to decompose and implement the functions and procedures;
- Using an appropriate programming style with identifiers, comments, good design of procedures and functions.

At the end of the course, students will have the following abilities:

- To understand and master the basics of discrete, logic, algorithmic mathematics and computational complexity, and their application for solving engineering problems;
- Basic knowledge on using and programming computers, operating systems, databases and software with applications in engineering;
- Knowledge of the structure, organization, operation and interconnection of computer systems, foundations of programming and their application for solving engineering problems.
- Knowledge, design and efficient use of the types and structures more suited to solve a data problem.
- Solving problems;
- Teamwork;
- Capacity for analysis and synthesis;
- Ability to organize and plan;
- Information Management Skills;
- How to make decisions;
- Concern for quality of programming and applications;
- Using basic tools of information technology and communications (ICT) necessary for the exercise of their profession and for learning throughout life;
- Evolve to exercise an open, educated, critical, committed, democratic and united citizenship, capable of analyzing reality, diagnose problems, formulate and implement solutions based on knowledge and for the common good;
- Critically assess the knowledge, technology and information available to solve real problems;
- As professionals and citizens, assume the importance of learning throughout life.
- Value the importance of research, innovation and technological development in the social, economic and cultural development of society.

	Study programme competences / results
Code	Study programme competences / results
А3	Capacidade para comprender e dominar os conceptos básicos de matemática discreta, lóxica, algorítmica e complexidade computacional
	e a súa aplicación para a resolución de problemas propios da enxeñaría.
A4	Coñecementos básicos sobre o uso e a programación dos ordenadores, sistemas operativos, bases de datos e programas informáticos
	con aplicación na enxeñaría.
A5	Coñecemento da estrutura, organización, funcionamento e interconexión dos sistemas informáticos, os fundamentos da súa
	programación e a súa aplicación para a resolución de problemas propios da enxeñaría.
A13	Coñecemento, deseño e utilización de forma eficiente dos tipos e estruturas de datos máis adecuados á resolución dun problema.
B1	Capacidade de resolución de problemas
B2	Traballo en equipo

В3	Capacidade de análise e síntese
B4	Capacidade para organizar e planificar
B5	Habilidades de xestión da información
В6	Toma de decisións
B7	Preocupación pola calidade
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e
	para a aprendizaxe ao longo da súa vida.
C4	Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a
	realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C7	Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.
C8	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da
	sociedade.

	Contents
Topic	Sub-topic

BASIC CONCEPTS	1.1 Algorithms
	1.1.1 Representation of algorithms
	1.2 Programs (applications)
	1.2.1 Types of programs
	1.3 Programming languages
	1.3.1 A historical overview
	1.3.2 Classification of languages
	1.3.3 Most important language instructions
	1.3.4 Properties of languages
	1.4 Code compilers
	1.5 Description of languages
	1.5.1 Backus?Naur Form notation
	1.5.2 Conway diagrams
	1.6 The structure of a program
	1.7 Elements of a program
	1.7.1 Predefined symbols
	1.7.2 Special symbols
	1.7.3 Identifiers
	1.7.4 Tags
	1.7.5 Comments
	1.7.6 Directives
	1.7.7 Constants
	1.7.8 Numbers
	1.7.9 Strings
	1.7.10 Variables: declaration and initiation
	1.8 Output and input
	1.8.1 Output sentences
	1.8.2 Input sentences
	1.9 Data types and operators
	1.9.1 Data types

1.9.2 Operators1.9.3 Expressions

2 Control statements	2.1 Sequential flow
	2.2 Alternative syntax
	2.2.1 IF statement
	2.2.2 CASE statement
	2.3 Repetitive statement
	2.3.1 Introduction
	2.3.2 Variables associated with loops
	2.3.3 WHILE loop
	2.3.4 Examples to perform in class
	2.3.5 FOR loop
	2.3.6 REPEAT loop
	2.3.7 Equivalence between loops
	2.3.8 Errors with loops
	2.3.9 Loop design
3 Program structure	3.1 Procedures
	3.1.1 Description
	3.1.2 Types of procedures
	3.1.3 Value and reference parameters
	3.1.4 Protected parameters
	3.1.5 Memory management for procedures
	3.1.6 Global and local variables
	3.1.7 Side Effects
	3.2 Functions
	3.2.1 Description
	3.2.2 Predefined functions
	3.2.3 User-defined functions
	3.3 Recursion
	3.3.1 Why recursion
	3.3.2 Direct and indirect recursion. FORWARD directive.
	3.3.3 Infinite recursion

	Methodologies
Methodologies	Description
Guest lecture /	In the theory sessions, the teacher describes the objectives and contents of the course as a personal point of view on
keynote speech	programming.
	The teacher will present the available programming methods and tools. In the case of special issues, the students should
	deepen their self-learning.
	The goal is that students learn to create algorithms for real problems, to use the basic data structures and to apply
	programming techniques for simple problems. The course programming language is represented by Extended Pascal, ISO
	10206 standard.
	The course slides will be available on UDC Moodle before each course lecture.

Seminar	In the seminar sessions practical exercises will be conducted in order to detect and address the students knowledge gaps.
Laboratory practice	In the practice sessions, students will write program pseudocodes and they will encode them with Extended Pascal ISO 10206
	Standard, they will compile, run and check the codes.
	The goal of the teacher is to supervise the code generated by the student, to resolve doubts, to correct bad programming
	styles and logical errors (Pascal errors will be detected by the compiler).
	The problems will be available on the UDC Moodle before each laboratory class.
	The Moodle forum will be used to respond to any related question about any aspect of the course. This way, all the students
	are able to have the same information in the same time.

	Personalized attention
Methodologies	Description
Guest lecture /	In both the lectures and the labs sessions, there is a personalized attention of the student, based on the type of class,
keynote speech	detecting the level of assimilation and understanding of the issues and explaining the practices required to implement.
Laboratory practice

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		
Guest lecture /	A3 A4 A5 A13 B5 B7	Course grade = continuous assessment grade + final exam grade	70
keynote speech	C3 C4 C6 C7		
		Continuous assessment grade is divided into two parts:	
		First test in the middle of the course (2 points): pseudocode and code programming	
		with each code line explained for one random exercise.	
		2. Second test in the last week of the course (3 points): code programming only for	
		two random exercises.	
		The final exam will consist of three exercises where the student must develop code (5 points).	
		The July extraordinary exam will consist of three problems to develop code (5 points).	
		This grade will be added to that one obtained in the continuous evaluation.	
		The evaluation in December consists into a single test with three problems (10 points).	
Laboratory practice	A4 A5 A13 B1 B2 B3	All the tests will be held on computer (programming code, writing pseudocodes, short	30
	B4 B6 B7	questions). There is no Pascal code programming on paper.	
		The students will randomly choose the exam tasks. Any attempt to cheat during an	
		exam will be punished with grade 0.	

Assessment comments

The final grades will be determined by the continuous assessment grades and the one obtained in the final exam. The final exam will consist of three programming exercises in the language used in the practice sessions.

Other comments

The student must keep in mind that you must perform a very important self-taught work by following the flow: reading, attending, understanding, asking, studying and practicing. Reading: Read the issue to be addressed before attending the theoretical sessions. Even if it seem strange, it is very important. Attending classes: Pay attention in class, do not rest, do not spend time just to take notes. Understanding: Understand the theory sessions and, if not, please ask. Asking: Ask what you do not understand. You have this right. Studying: to retain what you understood. Practicing: Program many applications, which are asked by the professor and others on their own. Programming is a subject that cannot be learned in two days. The student must go maturing concepts, and program many applications. During these classes, the students will be continuous evaluated.
