

Teaching Guide				
Identifying Data				2016/17
Subject (*)	Intelligent Systems	Code	614G01020	
Study programme	Grao en Enxeñaría Informática			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Second	Obligatoria	6
Language	SpanishEnglish			
Teaching method	Face-to-face			
Prerequisites				
Department	ComputaciónTecnoloxías da Información e as Comunicaci3ns			
Coordinador	Porto Pazos, Ana Belen	E-mail	ana.portop@udc.es	
Lecturers	Alonso Betanzos, Maria Amparo Alonso R3os, David Bol3n Canedo, Ver3nica Cabalar Fernandez, Jose Pedro Dorado de la Calle, Julian Pazos Sierra, Alejandro Porto Pazos, Ana Belen Rabu3al Dopico, Juan Ramon Rivero Cebri3n, Daniel	E-mail	amparo.alonso.betanzos@udc.es david.alonso@udc.es veronica.bolon@udc.es pedro.cabalar@udc.es julian.dorado@udc.es alejandro.pazos@udc.es ana.portop@udc.es juan.rabunal@udc.es daniel.rivero@udc.es	
Web				
General description	<p>The first objective of the course is to provide students with basic knowledge in the field of symbolic artificial intelligence systems: search, resolution, representation and reasoning.</p> <p>The second objective of the course is to provide students with basic knowledge in the field of subsymbolic artificial intelligence systems.</p> <p>The knowledge acquired will allow them to consider these systems as alternative computational tools that can be applied in solving different types of problems.</p>			

Study programme competences	
Code	Study programme competences
A21	Coñecemento e aplicaci3n dos principios fundamentais e t3cnicas b3sicas dos sistemas intelixentes e a s3a aplicaci3n pr3ctica.
B1	Capacidade de resoluci3n de problemas
B3	Capacidade de an3lise e s3ntese
B5	Habilidades de xesti3n da informaci3n
B9	Capacidade para xerar novas ideas (creatividade)
C6	Valorar criticamente o coñecemento, a tecnolox3a e a informaci3n dispoñible para resolver os problemas cos que deben enfrontarse.
C8	Valorar a importancia que ten a investigaci3n, a innovaci3n e o desenvolvemento tecnol3xico no avance socioecon3mico e cultural da sociedade.

Learning outcomes			
Learning outcomes			Study programme competences
Conocimiento y aplicaci3n de los principios fundamentales y t3cnicas b3sicas de los sistemas inteligentes y su aplicaci3n pr3ctica.			A21 B1 C6 B3 C8 B5 B9

Contents	
Topic	Sub-topic
1. Introduction	1.1. An historical perspective 1.2. Preliminary aspects 1.3. General considerations
2. Problem-Solving	2.1. Introduction to solving problems in AI 2.2. The state space concept. Searching 2.3. General characteristics of searching processes 2.4. Uninformed search strategies 2.5. Informed search strategies. Heuristic functions 2.6. Local search
3. Structured Knowledge Representation	3.1. Introduction 3.2. Declarative methods 3.3. Procedural methods 3.4. Examples and a practical case
4. Production Systems	4.1 Architecture: Knowledge base, active memory, inference engine 4.2. Dynamics of rule production systems 4.3. Basic cycle of a production system
5. A Brief Introduction to Reasoning in AI	5.1. Introduction 5.2. Categorical model 5.3. Bayesian reasoning fundamentals
6. Connectionist Systems: Origin and Context; Biological Fundamentals	6.1 Historical Evolution and Precursors. 6.2 Birth of Connectionist Systems. 6.3. Biological Basis of the Adaptive Systems 6.4. Adquisition and organization of the knowledge in Adaptive Systems.
7. Architecture, Feeding and Learning in Connectionist Systems	7.1 Processing element in Connectionist Systems. 7.2 Comparison between the biological element and the formal one. 7.3 Feeding and architecture of the Connectionist Systems. 7.4 Learning in Connectionist Systems.
8. Feed-Forward Connectionist Systems	8.1. Adaline 8.2. Perceptron 8.3. Aplications
9. Other Models of Connectionist Systems	9.1 Self-organizing networks 9.2. Other self-organizing models: Growing neural networks 9.3. Hopfield network.
10. New approaches in Sub-Symbolic Artificial Inteligence	10.1 Evolutionary Computation. 10.2 Artificial Life. 10.3 NBIC Technologies.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Laboratory practice	A21 B1 B5	20	0	20
Supervised projects	B3 B9	10	20	30
Guest lecture / keynote speech	C6 C8	30	60	90
Personalized attention		10	0	10

(*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Laboratory practice	<ul style="list-style-type: none">- Using Symbolic Artificial Intelligence techniques to solve problems.- Using Subsymbolic Artificial Intelligence techniques to solve problems.
Supervised projects	<ul style="list-style-type: none">- Study of the different classical models of intelligent agent and identification of the concepts involved in these models in practical application examples.- Study of advanced search algorithms.- Practical exercises on different Reasoning models presented (Items 4 and 5).- Evaluation test of acquired concepts.- Search, analysis of real problems that show the application of Sub-symbolic Intelligence Artificial Systems.
Guest lecture / keynote speech	Imparting of the contents of the different topics of the subject, encouraging the participation of students in the understanding of practical examples.

Personalized attention

Methodologies	Description
Laboratory practice Supervised projects	Personalized attention to practices in the classroom and for TGR will be developed.

Assessment

Methodologies	Competencies	Description	Qualification
Guest lecture / keynote speech	C6 C8	Written exam to assess knowledge of the matter.	60
Laboratory practice	A21 B1 B5	- Only work submitted before deadline of students who have attended the hours assigned to the practices are scored.	30
Supervised projects	B3 B9	- Only work submitted before deadline of students who have attended the hours assigned to the TGR are scored.	10

Assessment comments

In order to pass the subject will be required to pass the exam of theory and also achieve at least 5 points after adding the note of written exam, with the notes of practice and TGR.
