

Teaching Guide				
Identifying Data				2016/17
Subject (*)	Algebra	Code	770G01006	
Study programme	Grao en Enxeñaría Electrónica Industrial e Automática			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	First	FB	6
Language	Galician			
Teaching method	Face-to-face			
Prerequisites				
Department	Matemáticas			
Coordinador	Suarez Peñaranda, Vicente	E-mail	vicente.suarez.penaranda@udc.es	
Lecturers	Cao Rial, María Teresa Suarez Peñaranda, Vicente	E-mail	teresa.cao@udc.es vicente.suarez.penaranda@udc.es	
Web				
General description	We described in this course basic concepts of linear algebra and differential geometry, whose exposure can be developed in step 3 are			

Study programme competences / results	
Code	Study programme competences / results
A6	Capacidade para a resolución dos problemas matemáticos que se poidan suscitar na enxeñaría. Aptitude para aplicar os coñecementos sobre: álgebra lineal; xeometría; xeometría diferencial; cálculo diferencial e integral; ecuacións diferenciais e en derivadas parciais; métodos numéricos; algorítmica numérica; estatística e optimización.
B1	Capacidade de resolver problemas con iniciativa, toma de decisións, creatividade e razoamento crítico.
B2	Capacidade de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
B3	Capacidade de traballar nun contorno multilingüe e multidisciplinar.
B4	Capacidade de traballar e aprender de forma autónoma e con iniciativa.
B6	Capacidade de usar adecuadamente os recursos de información e aplicar as tecnoloxías da información e as comunicacións na enxeñaría.
C1	Expresarse correctamente, tanto de forma oral coma escrita, nas linguas oficiais da comunidade autónoma.

Learning outcomes			
Learning outcomes	Study programme competences / results		
	results		
Modeling and solving mathematical problems in the field of engenengineering.	A6	B1 B2 B3 B4 B6	C1
Possessing own scientific mathematical skills, enabling it to ask and answer some math questions.	A6	B1 B2 B3 B4 B6	C1
Create linear models that approximate problems to solve. Having ability to apply knowledge of Linear Algebra and Differential Geometry.	A6	B1 B2 B3 B4 B6	C1

Understand mathematical models that explain the behavior of a fluid in a 1-dimensional space.	A6	B1 B2 B3 B6	C1
Knowing how to use numerical methods in solving some mathematical problems that arise.	A6	B1 B2 B3 B6	C1
Knowing the thoughtful use of tools symbolic and numeric computation.	A6	B4 B6	

Contents	
Topic	Sub-topic
Path Integral	Paths in R^n . Reparameterizations. Line integrals of scalar functions. Applications of the integrals of scalar functions. Integrals of vector fields. Gradient type functions. Green theorem.
Surface integral	Cross product. Surfaces in R^3 . Area of a surface. Integral of a scalar function. Oriented surfaces. Integral of vector fields. Divergence. Gauss Theorem. Curl. Stokes Theorem.
Diagonalization	Matrices: types and examples. Matrix operations. Matrix transpose. Symmetric and antisymmetric matrices. Determinant of a square matrix. Rank. Inverse matrix.
Vector spaces	The vector space R^n . Operations: vector addition, scalar multiplication. Vector subspaces. Direct sum. Linear combination, linear span. Linear independence. Spanning set. Basis and dimension. Theorems about basis. Coordinates, change of coordinates.
Linear maps	Linear maps. Properties of the linear maps. Kernel and Image of a linear map. Operations with linear maps. Matrix associated to a linear map.

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Guest lecture / keynote speech	B2 B3 B4 C1	21	42	63
Document analysis	B4 B6	0	8	8
Problem solving	A6	20	20	40
Mixed objective/subjective test	A6 B1 B4 C1	6	6	12
Laboratory practice	A6 B6 B4	9	9	18
Personalized attention		9	0	9

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	We present the contents of the subject. Examples of applications are developed and related activities are proposed.
Document analysis	We discuss the different notations in mathematics. The sources of information are commented: books, magazines, webpages.
Problem solving	With them we move from theory to practice. Specific problems of the subject developed in the lectures are solved.
Mixed objective/subjective test	They are useful to determine the degree of knowledge that students get at classes and with their personal study. It may consist of an explanation of any content of the course, the answer of test questions, the resolution of theoretical and practical issues and developing solutions to issues involving deep knowledge of the subject.
Laboratory practice	Its aim is to apply computer programs to solve problems commented in the lectures.

Personalized attention

Methodologies	Description
Problem solving Guest lecture / keynote speech Laboratory practice	The personal attention allows to adapt the study to the level of knowledge and competence of each student. Individual attention of the students optimizes time spent studying and allows correct misconceptions.

Assessment

Methodologies	Competencies / Results	Description	Qualification
Problem solving	A6	We will formulate practical issues in which students have to seek a solution to a given problem.	20
Mixed objective/subjective test	A6 B1 B4 C1	They are tests made for measuring the level of knowledge of the subject by students. They do not have a defined profile, as they can range from test questions in which the student must only choose one answer among the options proposed, or solving problems involving an action strategy or theoretical questions that reflect the degree of knowledge of the subject.	75
Laboratory practice	A6 B6 B4	Students should know the functioning of a computer program that helps resolve mechanical problems raised previously.	5

Assessment comments

<p>The final grade of the subject consists of three parts:</p> <p>i) Problem solving: It's made through written tests and the development of classes in the classroom, where the teacher assesses individually the degree of knowledge of the subject of each student. This part represents 20% of the grade.</p> <p>ii) performing laboratory practice, where students will learn to use the software that provides the teacher. This part represents 5% or qualification.</p> <p>iii) Mixed objective/subjective test. This part represents 75% of the grade for students, and it's broken down as follows: 35% lessons 1 and 2, 35% lessons 3,4 and 5, 5% tasks related to laboratory practices.</p> <p>Part-time students with academic dispensation are valued paragraph i) in official examinations, and 5% corresponding with activities related to laboratory practices of paragraph iii) by a practical test.</p>

Other comments

<p> The student must know the content of the subjects of Mathematics studied at ESO and high school. Those students from Profesional Learning should study the basic concepts related to applications, functions and integration of real functions of real variable, which are contained in the curricula of high school, and are not in Profesional Learning. </p>
