General description	This course contains basic and	fundamental concepts	of research me	ethods on biologica	I processes that are performed	
	living cells.					

	Study programme competences / results
Code	Study programme competences / results
A1	Define concepts, principles, theories and specialized facts of different areas of chemistry.
A3	Innovate in the methods of synthesis and chemical analysis related to the different areas of chemistry
A4	Apply materials and biomolecules in innovative fields of industry and chemical engineering.
B1	Possess knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often within a research context
B4	Students should be able to communicate their conclusions, and the knowledge and the reasons that support them to specialists and non-specialists in a clear and unambiguous manner
B5	Students must possess learning skills to allow them to continue studying in a way that will have to be largely self-directed or autonomous.
B7	Identify information from scientific literature by using appropriate channels and integrate such information to raise and contextualize a research topic
B10	Use of scientific terminology in English to explain the experimental results in the context of the chemical profession
B11	Apply correctly the new technologies to gather and organize the information to solve problems in the professional activity.
C1	CT1 - Elaborar, escribir e defender publicamente informes de carácter científico e técnico
C3	CT3 - Traballar con autonomía e eficiencia na práctica diaria da investigación ou da actividade profesional.
C4	CT4 - Apreciar o valor da calidade e mellora continua, actuando con rigor, responsabilidade e ética profesional.

Methodologies		
Methodologies	Description	

Problem solving	Theoretical / practical class in which the teacher propose and students solve applications of theory, problems and applied
	questions. It may also imclude the presentation by students of a topic related to the subject.
	Small group interactive classes seminars , " S " in the timetables)
Seminar	Tutorials in very small group ("T" in the timetables ) planned by the teacher and coordinated by the Tutoring
	Center. In general, each student will account for two hours per semester and subject. Monitoring activities as directed
	exercises, clarification of doubts about theory, problems, exercises, readings or other proposed tasks. Also the presentation,
	discussion or comments in small groups. Attendance at these classes is mandatory.
Mixed	Test to evaluate skills and knowledge
objective/subjective	
test	
Guest lecture /	Lesson taught by the teacher who may have different formats (theory, problems and / or general examples, general guidelines
keynote speech	on the matter ). The teacher may have the support of audiovisual and computer media but, in general, students do not need
	to handle them in class.

Personalized attention		
Methodologies	Description	
Problem solving	Students with part-time dedication or waiver of presence should contact the teachers of the subject in the early going to	
Seminar establish a schedule of activities to acquire and evaluate in a complementary way the competences.		

Assessment			
Methodologies	Competencies /	Description	Qualification
	Results		
Guest lecture / keynote speech	B5 C4	Evaluation of attendance and participation	10
Problem solving	A1 A4 A3 B1 B5 B11 C3	Continuous assessment	5
Seminar	B4 B7 B10 C1 C4	Continuous assessment	15
Mixed objective/subjective test	A4 A1 B4 B1 C4 C3	Final evaluation	70

**Assessment comments** 

Evaluation procedure.

The assessment of this will be done through continuous assessment and the completion of a final exam. The access to the exam requires participation in at least 80% of classroom and teaching compulsory attendance activities (seminars and tutorials.

Continuous assessment (N1) will weigh 40% in the total of the course and consist of two components: interactive small group classes (seminars) and interactive classes in very small groups (tutorials). Seminars and tutorials may include exercises and assignments made in person, exercises

submitted to the teacheror public presentations of topics previously selected.

The final exam (N2) will cover the entire content.

The student's score, will be obtained as a result of applying the following formula:

End = maximum Note  $(0.4 \times 0.6 \times N1 + N2, N2)$ 

N1 is the corresponding to the continuous assessment (scale 0-10) and N2 numerical final exam (0-10 scale numerical grade.

Students with part-time dedication or waiver attendance may choose to

be evaluated in a final exam if they do not qualify for continuous evaluation.
