| General description     | This course introduces the basics of                            | of the algorithms and data stru | ctures that are commonly | used in the field of |  |
|                         | computational biology.  |                                 |                          |                      |  |

|      | Study programme competences   |
|------|---|
| Code | Study programme competences   |
| A1   | CE1 - Ability to know the scope of Bioinformatics and its most important aspects  |
| A2   | CE2 ? To define, evaluate and select the architecture and the most suitable software for solving a problem in the field of bioinformatics |
| A3   | CE3 ? To analyze, design, develop, implement, verify and document efficient software solutions based on an adequate knowledge of the      |
|      | theories, models and techniques in the field of Bioinformatics  |
| A8   | CE8 - Understanding the basis of the information of the hereditary material, its transmission, analysis and evolution                     |
| A9   | CE9 ? To understand the benefits and the problems associated with the sequencing and the use of biological sequences, as well as          |
|      | knowing the structures and techniques for their processing  |
| B1   | CB6 - Own and understand knowledge that can provide a base or opportunity to be original in the development and/or application of ideas,  |
|      | often in a context of research  |
| B2   | CB7 - Students should know how to apply the acquired knowledge and ability to problem solving in new environments or little known within  |
|      | broad (or multidisciplinary) contexts related to their field of study   |
| B8   | CG3 - Be able to work in a team, especially of interdisciplinary nature   |
| C6   | CT6 - To assess critically the knowledge, technology and information available to solve the problems they face to.                        |
| C7   | CT7 ? To maintain and establish strategies for scientific updating as a criterion for professional improvement.                           |
|      |   |

|                      | Methodologies   |  |  |
|----------------------|---|--|--|
| Methodologies        | Description   |  |  |
| ICT practicals       | Students will complete practical exercises to develop all the knowledge acquired during lectures.                         |  |  |
| Supervised projects  | Students will develop a work, individually or in small group, under the supervision of the teachers.                      |  |  |
| Mixed                | It consists of a written test to show that the student has acquired the knowledge and skills during lectures and practice |  |  |
| objective/subjective | sessions.   |  |  |
| test                 |   |  |  |
| Guest lecture /      | Lectures where the course contents are exposed.   |  |  |
| keynote speech       |   |  |  |

| Personalized attention |   |  |
|------------------------|---|--|
| Methodologies          | Description   |  |
| Supervised projects    | There may exist differences among the students regarding their background on algorithms and data structures. Thus, teachers   |  |
| ICT practicals         | will provide personalized attention for practice sessions and for the supervised project, both individual or in small groups. |  |
|                        |   |  |

|                      |                   | Assessment   |               |
|----------------------|-------------------|--|---------------|
| Methodologies        | Competencies      | Description  | Qualification |
| Mixed                | A1 A2 A3 A8 A9 B2 | It will consist of a written test where the students must prove the knowledge and        | 30            |
| objective/subjective |                   | competences acquired during lectures and practice sessions.                              |               |
| test                 |                   |  |               |
|                      |                   |  |               |
|                      |                   | To pass the course globally it is necessary to obtain in the mixed test a minimum        |               |
|                      |                   | grade of 1.5 (over 3). If that minimum grade is not achieved, the maximum grade          |               |
|                      |                   | cannot exceed 4.9 (and therefore the course is failed)                                   |               |
| Supervised projects  | A1 A2 A3 A8 A9 B1 | Students must complete a project, individually or in small groups, related with a        | 20            |
|                      | B2 B8 C6 C7       | scientific article. It must be presented orally. For the second opportunity the defenses |               |
|                      |                   | will be done with a written test.  |               |
| ICT practicals       | A2 A3 B1 B2 B8 C6 | The work done by the students during practice sessions will be assessed. Students        | 50            |
|                      | C7                | must submit bulletins with their solutions to proposed problems and defend them          |               |
|                      |                   | orally. For the second opportunity the defenses will be done with a written test.        |               |

Assessment comments

## FIRST OPPORTUNITY:

Students that do not take the written exam will obtain a grade of "Non presentado" (Absent).

SECOND OPPORTUNITY:

Only those students that have not passed the course in the first opportunity can be evaluated in the second opportunity. Students can recover any of the parts as follows:

ICT practicals (50%): students must submit the exercises bulletins and defended them in a written test. Supervised project (20%): the defense of the project will be done using a written test. Written test (30%): in the same conditions as in the first opportunity. In case of not retaking one of the parts, the grade obtained in the first opportunity for that part will be kept. To pass the course globally it is necessary to obtain in the mixed test a minimum grade of 1.5 (over 3). Students that do not retake any part will obtain a grade of "Non presentado" (Absent). ADVANCED OPPORTUNITY:

The assessment for the advanced opportunity will consist of a written exam that will compute for the 100% of the grade, and will include all the knowledge and skills acquired during lectures, practice sessions and supervised project.ACADEMIC DISPENSATION:

Students officially enrolled part-time who have been granted an official dispensation from attending classes, as stipulated in the regulations of this University, must contact with the responsible of the course within the first two weeks to establish the conditions for submitting and defending the practical exercises and the supervised project.
