

Teaching Guide						
Identifying Data				2017/18		
Subject (*)	Electronics Technology		Code	614G01005		
Study programme	Grao en Enxeñaría Informática					
Descriptors						
Cycle	Period	Year	Type	Credits		
Graduate	2nd four-month period	First	FB	6		
Language	Spanish/Galician/English					
Teaching method	Face-to-face					
Prerequisites						
Department	Enxeñaría de Computadores					
Coordinador	Bregains Rodriguez, Julio Claudio	E-mail	julio.bregains@udc.es			
Lecturers	Barreiro Alvarez, Manuel Bregains Rodriguez, Julio Claudio Castro Castro, Paula Maria Domínguez Bolaño, Tomás Fresnedo Arias, Óscar García Naya, José Antonio González Coma, José Pablo Gonzalez Lopez, Miguel Lamas Seco, Jose Juan Vazquez Araujo, Francisco Javier	E-mail	manuel.barreiro@udc.es julio.bregains@udc.es paula.castro@udc.es tomas.bolano@udc.es oscar.fresnedo@udc.es jose.garcia.naya@udc.es jose.gcoma@udc.es miguel.gonzalez.lopez@udc.es jose.juan.lamas.seco@udc.es francisco.vazquez@udc.es			
Web	moodle.udc.es/					
General description	Physical principles of semiconductors and logic families. Electronic and photonic devices. Electronic circuits.					

Study programme competences				
Code	Study programme competences			
A2	Comprensión e dominio dos conceptos básicos de campos e ondas, e electromagnetismo, teoría de circuitos eléctricos, circuitos electrónicos, principio físico dos semicondutores e familias lóxicas, dispositivos electrónicos e fotónicos e a súa aplicación para a resolución de problemas propios da enxeñaría.			
B1	Capacidade de resolución de problemas			
B3	Capacidade de análise e síntese			
C2	Dominar a expresión e a comprensión de forma oral e escrita dun idioma estranxeiro.			
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrentarse.			

Learning outcomes				
Learning outcomes			Study programme competences	
To learn fundamental physical concepts governing computer functioning: electrical and electronic circuits.			A2	B1 C2 B3 C6
Practical applications of the solid-state devices and analog and digital integrated circuits.			A2	B1 C2 B3 C6

Contents	
Topic	Sub-topic
Chapter 1. Electric circuits	1.1 Basic concepts of electricity. Ohm's law. 1.2 Voltage and current sources. Power. 1.3 Electrical circuits. Kirchhoff's laws. 1.4 Circuits theorems.

Chapter 2. Charging and discharging capacitors	2.1 Waveforms. Fundamental parameters. 2.2 Behavior of the capacitor parameters with respect to time. 2.3 R-C circuits in the time domain. 2.4 R-C Integrator and differentiator circuits.
Chapter 3. p-n junction diodes	3.1 Physical principles of semiconductor devices. 3.2 p-n junction. 3.3 Diode V-I characteristic. Linear models. 3.4 Avalanche diodes. LED. Photodiodes.
Chapter 4. Transistors	4.1 MOSFET unipolar transistors. 4.2 V-I characteristic in common-source mode. 4.3 Operational regions and linear equivalent models. 4.4 MOSFET transistors in amplifying and switching modes.
Chapter 5. Logic Families	5.1 Introduction. General properties of digital circuits. 5.2 The CMOS inverter. 5.3 CMOS gates. 5.4 CMOS families.
Chapter 6. Amplifiers	6.1 Foundations of amplifiers. 6.2 The operational amplifier. Characteristics. 6.3 Applications.

Planning

Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A2 B1 B3 C2 C6	30	42	72
Laboratory practice	A2 B1 B3 C2 C6	20	30	50
Problem solving	A2 B1 B3 C2 C6	10	14	24
Mixed objective/subjective test	A2 B1 B3 C2 C6	3	0	3
Personalized attention		1	0	1

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Guest lecture / keynote speech	Educational exposition, using both slides and blackboard, of the theoretical contents of the subject. Examples.
Laboratory practice	Students will solve exercises in the electronics laboratory with the aim of learning the basic usage of fundamental instrumentation devices (multimeter, power supply, arbitrary function generation, and oscilloscope). Students will also become familiar with measurement processes in real-world circuits. Students will also solve practical exercises using a PC equipped with the electronic circuits simulation software LTspice with the objective of getting used to the computer-aided circuits design and analysis.
Problem solving	Students learn how to formulate and solve representative exercises. They also gather together in small groups in order to share their knowledge and discuss some results.
Mixed objective/subjective test	Exam about the contents of the subject combining theoretical questions with practical exercises.

Personalized attention

Methodologies	Description

Guest lecture / keynote speech	Guest lecture/keynote speech: To solve questions from the students related to the theoretical concepts introduced during the lectures.
Laboratory practice	Laboratory practice; To solve questions from the students related to the proposed exercises to be solved in the electronics laboratory with the help of the basic instrumentation equipment.
Problem solving	Problem solving; To solve questions from the students related to the proposed exemplary exercises. In all cases, communication with the students will take place using the individual tutoring hours, through email, or by making use of the corresponding Moodle tools.

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	A2 B1 B3 C2 C6	Evaluation of the exercises solved by the student in the electronics laboratory.	20
Problem solving	A2 B1 B3 C2 C6	Evaluation, by means of mixed tests, of the exemplary exercises solved by the student.	10
Mixed objective/subjective test	A2 B1 B3 C2 C6	Final evaluation of the theoretical concepts and problem solving skills.	70

Assessment comments	
The evaluation of this subject consists of:	
- final exam including theoretical questions and practical exercises,	
- defense corresponding to the laboratory practices during the course, and.	
- problem-solving tests during the lecture period.	
The final mark is obtained as follows: Final mark = A + B + C, where:	
A = mark corresponding to the final exam (0 to 7),	
B = mark corresponding to the laboratory exercises (0 to 2), and	
C = mark corresponding to the problem-solving tests (0 to 1).	
To pass the subject the final mark must be greater than or equal to 5.	
In the second opportunity (July) only the final exam can be repeated (A). Marks corresponding to the laboratory exercises (B) and problem-solving tests (C) correspond to those obtained during the lecture period.	
For the Early Assessment Opportunity the same criteria as for the second opportunity will apply.

Recommendations**Subjects that it is recommended to have taken before**

Computer Science Preliminaries/614G01002

Calculus/614G01003

Subjects that are recommended to be taken simultaneously

Fundamentals of Computers/614G01007

Subjects that continue the syllabus

Fundamentals of Computers/614G01007

Computer Structure/614G01012

Networks/614G01017

Concurrency and Parallelism/614G01018

Infrastructure Management/614G01025

Hardware Devices and Interfaces/614G01032

Other comments

Students in this subject should have a basic knowledge about differential and integral calculus as well as electromagnetism.
