

## Teaching Guide

Teaching Guide				
Identifying Data				2017/18
Subject (*)	Systems 1		Code	630G02030
Study programme	Grao en Estudos de Arquitectura			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	1st four-month period	Third	Obligatoria	6
Language	SpanishGalicianEnglish			
Teaching method	Face-to-face			
Prerequisites				
Department	Construcións e Estruturas Arquitectónicas, Cívís e Aeronáuticas			
Coordinador	Santos VÁzquez, Angeles	E-mail	angeles.santos@udc.es	
Lecturers	Alonso Alonso, Patricia Antelo Tudela, Enrique Dios Vieitez, Maria Jesus Pintos Pena, Santiago Santos VÁzquez, Angeles	E-mail	patricia.alonso.alonso@udc.es enrique.antelo@udc.es maria.jesus.dios@udc.es santiago.pintos.pena@udc.es angeles.santos@udc.es	
Web	www.udc.es/etsa			
General description	Los objetivos de la materia es conocer y describir, formal y funcionalmente las instlaciones como componentes del sistema global que es el edificio y su relación con las redes urbanas. Además se trata de que los alumnos comprendan los principios técnicos y esuqemas funcionales en los que se basan las instalaciones, de manera que se alcance por parte del alumno la capacidad de analizar críticamente las necesidades y requisitos de las instalaciones; descripcion de los componentes de las instalaciones asi como de la normativa técnica asociada.			

## Study programme competences

Code	Study programme competences
A16	Ability to conceive, calculate, design, integrate in buildings and urban units and execute supply systems, water treatment and sewage, heating and air conditioning (T) &quot;
A17	Ability to apply technical and construction standards and regulations
A20	Ability to assess the construction works
A22	Ability to project building and urban transformers and power supply systems, audiovisual communication, acoustic conditioning and artificial lighting
A23	Ability to maintain systems
A26	Adequate knowledge of the physical and chemical characteristics, production procedures, pathology and use of building materials
A29	Knowledge of administrative, management and professional procedures
A31	Knowledge of methods of measurement, assessment and expert's report
A63	Development, presentation and public review before a university jury of an original academic work individually elaborated and linked to any of the subjects previously studied
B1	Students have demonstrated knowledge and understanding in a field of study that is based on the general secondary education, and is usually at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of their field of study
B2	Students can apply their knowledge to their work or vocation in a professional way and have competences that can be displayed by means of elaborating and sustaining arguments and solving problems in their field of study
B3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include reflection on relevant social, scientific or ethical issues
B4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist public
B5	Students have developed those learning skills necessary to undertake further studies with a high level of autonomy
B10	Knowing the physical problems, various technologies and function of buildings so as to provide them with internal conditions of comfort and protection against the climate factors in the context of sustainable development

B12	Understanding the relationship between people and buildings and between these and their environment, and the need to relate buildings and the spaces between them according to the needs and human scale
C1	Expressing themselves correctly, both orally and in writing, in the official languages of the autonomous region
C3	Using basic tools of information technology and communications (ICT) necessary for the exercise of the profession and for lifelong learning
C4	Exercising an open, educated, critical, committed, democratic and caring citizenship, being able to analyse facts, diagnose problems, formulate and implement solutions based on knowledge and solutions for the common good
C5	Understanding the importance of entrepreneurship and knowing the means available to the entrepreneur
C6	Critically evaluate the knowledge, technology and information available to solve the problems they must face
C7	Assuming as professionals and citizens the importance of learning throughout life
C8	Assessing the importance of research, innovation and technological development in the socio-economic advance of society and culture

Learning outcomes			
Learning outcomes		Study programme competences	
Ability to conceive, calculate, design, integrate in buildings and urban units and execute supply systems, water treatment and sewage, heating and air conditioning (T) &quot;		A16	
Ability to apply technical and construction standards and regulations		A17	
Ability to assess the construction works		A20	
Ability to project building and urban transformers and power supply systems, audiovisual communication, acoustic conditioning and artificial lighting		A22	
Ability to maintain systems		A23	
Adequate knowledge of the physical and chemical characteristics, production procedures, pathology and use of building materials		A26	
Knowledge of administrative, management and professional procedures		A29	
Knowledge of methods of measurement, assessment and expert's report		A31	
Development, presentation and public review before a university jury of an original academic work individually elaborated and linked to any of the subjects previously studied		A63	
Students have demonstrated knowledge and understanding in a field of study that is based on the general secondary education, and is usually at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of their field of study			B1
Students can apply their knowledge to their work or vocation in a professional way and have competences that can be displayed by means of elaborating and sustaining arguments and solving problems in their field of study			B2
Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include reflection on relevant social, scientific or ethical issues			B3
Students can communicate information, ideas, problems and solutions to both specialist and non-specialist public			B4
Students have developed those learning skills necessary to undertake further studies with a high level of autonomy			B5
Knowing the physical problems, various technologies and function of buildings so as to provide them with internal conditions of comfort and protection against the climate factors in the context of sustainable development			B10
Understanding the relationship between people and buildings and between these and their environment, and the need to relate buildings and the spaces between them according to the needs and human scale			B12
Expressing themselves correctly, both orally and in writing, in the official languages of the autonomous region			C1

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Supervised projects	A work related of the subject program will be realized. The objective is that the student defines the facilities that are studied in an architectural Project. These works or practicums are conceived like a natural extension of the theoretical classes. Works are contemplated from a double perspective: as an opportunity to broaden and deepen the theoretical concepts acquired and as an exercise of applying these same concepts to specific cases, in which the student can experience the value of the learned criteria. Final practicum will be delivering at the end of the semester. Practicum will be carried out individually or in small groups. Attendance to practical classes is compulsory.

Objective test	<p>Continuous assessment method will be used taking into account:</p> <ul style="list-style-type: none"> <li>-attendance to classes, taking into account active attitude of the student in them.</li> <li>-preparation and presentation of practicum</li> <li>-exam of the subject</li> </ul> <p>At the end of the semester on the date indicated by Head of Studies will take the examination (objective test) of the subject.</p>
Guest lecture / keynote speech	<p>Oral sessions/lectures consist of the exposition by the lecturer of different contents of the subject. In them, students will be able to interact with the lecturer by raising doubts or questions. Lecturer, if appropriate, can prepare teaching material that will constitute a guide to help the study of the subject, not exempt from the bibliography and, that does not suppose the minimum content of the subject.</p> <p>Attendance to theoretical classes is compulsory</p>

## Personalized attention

Methodologies	Description
Supervised projects	Doubts raised by the student about theory and practical work will be answered.

## Assessment

Methodologies	Competencies	Description	Qualification
Guest lecture / keynote speech	A16 A17 A20 A22 A23 A26 A29 A31 A63 B1 B2 B3 B4 B5 B10 B12 C1 C3 C4 C5 C6 C7 C8	Attendance to theoretical and practical classes is essential and prior condition to qualify the exam and practicum (minimum 80%).	0
Supervised projects	A16 A17 A20 A22 A23 A26 A29 A31 A63 B1 B2 B3 B4 B5 B10 B12 C1 C3 C4 C5 C6 C7 C8	Final grade requires continuous attendance (minimum 80%) and have passed both the theoretical part (minimum 5 points) and the supervised project/practicum (minimum 5 points) of the subject. The final grade of the subject will be made up with the final exam (60%) and final grade of practicum (40%). In relation to the practicums, assessment will take into account the clarity, precision, conceptual rigor, appropriateness, environmental sensitivity, degree of problem solving and the integration of the facilities in the building.	40
Objective test	A16 A17 A20 A22 A23 A26 A29 A31 B1 B2 B3 B4 B5 B10 B12 C1	It will consist of an examination at the end of the semester concerning theoretical and practical contents of the subject.	60

## Assessment comments

By the same procedure, assessment in successive enrollments will be carried out. Assessment conditions are the same for the opportunity of June and July. Teaching to mobility students could be adapted, if the teacher considers it appropriate, to pedagogical conditions, special tests, as well as tests and evaluation exams. No passing partial qualifications (theory or practice, except for the July opportunity of the same academic year in which the partial qualification (theory or practice) will be saved. In order to pass the subject it is essential to pass the objective test, supervised project (practicum) and a minimum compulsory attendance to theoretical and practical classes.
