General description	This course is an introduction to the main concepts of Linear Algebra and Integrals over parths and surfaces. The Linear			parths and surfaces. The Linear	
	Algebra part includes the study of Vector Spaces and Linear Maps, including a basic analysis of diagonalization and			llyisis of diagonalization and	
	Jordan normal form of endomorphis	sms. The study of Inte	grals over p	aths and surfaces re	equires the introduction and study
	of the main basic properties of these two concepts finishing with some of the important theorems within this area.			neorems within this area.	

	Study programme competences
Code	Study programme competences
A1	Skill for the resolution of the mathematical problems that can be formulated in the engineering. Aptitude for applying the knowledge on:
	linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and in partial derivatives;
	numerical methods; algorithmic numerical; statistics and optimization
A5	Have a capacity for the space vision and knowledge of the techniques of graphic representation, so much for traditional methods of metric
	geometry and descriptive geometry, as through the applications of design assisted by computer
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and
	itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates
	proceeding from the vanguard of its field of study
B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to
	prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
В3	That the students have the ability to bring together and to interpret relevant data (normally in its area of study) to emit judgments that
	include a reflection on relevant subjects of social, scientific or ethical kind
B4	That the students can transmit information, ideas, problems and solutions to a public as much specialized as not specialized
B5	That the students developed those skills of learning necessary to start subsequent studies with a high degree of autonomy
B6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.
C1	Using the basic tools of the technologies of the information and the communications (TIC) necessary for the exercise of its profession and
	for the learning throughout its life.
C2	Coming across for the exercise of a, cultivated open citizenship, awkward, democratic and supportive criticism, capable of analyzing the
	reality, diagnosing problems, formulating and implanting solutions based on the knowledge and orientated to the common good.
C4	Recognizing critically the knowledge, the technology and the available information to solve the problems that they must face.
C5	Assuming the importance of the learning as professional and as citizen throughout the life.
C6	Recognizing the importance that has the research, the innovation and the technological development in the socioeconomic and cultural
	advance of the society.

Learning outcomes	
Learning outcomes	Study programme
	competences

To solve problems that may appear in an engineering context.	A1	B1	C5
		B2	C6
		В3	
		B5	
To think in a logic, critic and creative way.		B2	C2
		В3	C5
		B5	C6
		В6	
To familiarize ourselves with mathematical lenguage, in particular with the algebraic one.	A1	B2	C4
	A5	В3	
		B5	
		В6	
To understand the main ideas in posing mathematical problems, making use of algebraic tools.	A1	B1	C2
		B2	C4
		В3	
		B4	
		B5	
		В6	
To be able to use the bibliographical references and other computer tools, such as mathematical software, to find out the	A1	B2	C1
appropriate information to solve a given problem.		В3	
		B4	
To know the main characteristics of a space endowed with an algebraic structure, mainly the vector space structure.	A1	B2	C4
		В3	C5
To understand the equivalence between the matrix concept and the linear map concept, knowing the consequences of this	A1	B2	C4
relationship.			C5
To know and understand the concepts of paths and surfaces in Euclidean space. To understand the geometrical and physical	A1	B2	C4
meaning of derivatives and integrals applied to these mathematical objects.	A5	В6	C5
			C6

	Contents
Topic	Sub-topic
Vector spaces	Euclidean spaces R^2 and R^3. Operations: sum, product by real numbers.
	Vector subspaces.
	Direct sum.
	Linear combination, span.
	Linear independence.
	System of generators.
	Basis and dimension.
	Theorem of the basis.
	Coordinates, change of coordinates.
	Applications to systems of linear equations.
inear maps	Correspondences. Maps.
	Linear maps.
	Properties of linear maps.
	Matrix associated to a linear map.
	Applications to systems of linear equations.
Diagonalization of endomorphisms	Invariant subspaces.
	Eigenvalues and eigenvectors.
	Diagonalizable endomorphisms.

Integrals over paths	Paths in R^2 and R^3.
	Parametrizations.
	Path integrals of scalar functions.
	Line integrals of vector fields.
	Gradient vector fields.
	Green's Theorem.
Integrals over surfaces	Parametrized surfaces.
	Surface integrals.
	Rotational and divergence.
	Stokes's Theorem.
	Divergence Theorem.
Appendix: the free software program MAXIMA	Practical sessions with the free software program MAXIMA

	Methodologies
Methodologies	Description
Guest lecture /	Oral exhibition complemented with the use of audiovisual means and some questions headed to the students, with the
keynote speech	purpose to transmit knowledges and facilitate the learning
Objective test	Written exam used for the evaluation of the learning, whose distinctive stroke is the possibility to determine if the answers
	given are or no correct. It constitutes an instrument of measure, elaborated rigorously, that allows to evaluate knowledges,
	capacities, skills, performance, aptitudes, attitudes, etc
ICT practicals	This methodology allows students to learn effectively, through practical activities (demonstrations, simulations, etc.) the theory
	of a specific field through the use of information and communication technology. This type of training is geared towards the
	implementation of learning in which you can combine various methodologies / tests by using electronic tools such as a
	calculator, computer, etc. The students developed practical oriented tasks on a specific topic, with the support and supervision
	of the professors. These practices can be done individually or in groups.
Problem solving	Technic by means of which one has to solve a specific problematic situation related to the contents of the subject.

Personalized attention		
Methodologies	Description	
Problem solving	The contents of the subject as well as the different methodologies developed require that students work by themselves. This	
ICT practicals	will generate some questions that they can ask during the classes or during the office hours.	
	Also, the ICT practicals will be guided by the professors in charge.	

Assessment			
Methodologies Competencies		Description	
Objective test	A1 A5 B1 B2 B3 B4	Written exam will be used to assess learning of the contents of the subject. The exam	100
	B5 B6 C1 C2 C4 C5	consists of four parts, the first one will be performed in the planned period for partial	
	C6	exams and will include lessons 1 and 2. This part will be eliminatory and retrievable	
		and will be weighted as 40% of the final grade. The second part will be developed	
		throughout the course by making working groups, students being graded by a test	
		assessing gained competences. This part will be weighted as 15% of the final grade.	
		The third part will be performed during the usual period of final exams and will assess	
		the first, second and third parts. Its total weight is 90%.	
		The fourth part will consist of a test related to the software MAXIMA, where the	
		student will show his/her capability in solving problems about the contents of the	
		subject aided by the computer. This test is not retrievable: mark will be saved until the	
		second opportunity. Its weight is 10% of the final grade	

Assessment comments

Comments about the assessment:

First part: it will be graded at a maximum of 4 points. If at least 2 points are reached in this part, students may choose not to do the corresponding part in the final exams (first or second opportunity). Second part: it will be graded at a maximum of 1,5 points. If at least 0.75 points are reached in this part, students may choose not

to do the corresponding part in the final exams (first or second opportunity).

Third part:

- If a minimum of 50% in the first part (issues 1 and 2) or in the second part (issue 3), students may choose not to do the corresponding part in the final exams (first or second opportunity).
- Students will be necessarily assessed of lessons 4 and 5 of the final exam. Furthermore, a minimum of the 40% of the grade is required to pass the subject.

Remark: grades obtained in the first and the second part will be saved until the second opportunity if half of the grade is got. This is independently applied to each part involved in the assessment.
