

Teaching Guide				
Identifying Data				2017/18
Subject (*)	Functional Rehabilitation in Foot and Leg Disorders	Code	750G02037	
Study programme	Grao en Podoloxía			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Fourth	Optativa	6
Language	SpanishGalician			
Teaching method	Face-to-face			
Prerequisites				
Department	Ciencias Biomédicas, Medicina e Fisioterapia			
Coordinador	Souto Gestal, Antonio	E-mail	antonio.souto@udc.es	
Lecturers	Souto Gestal, Antonio	E-mail	antonio.souto@udc.es	
Web	moodle.udc.es			
General description	This subject has as aim give to know to the students of podiatry a protocol of character interdisciplinar for the assessment of the complex articulate of the ankle and foot, as well as his global implications in the rest of corporal segments, using for this the physical exploration and clinical reasoning been still in the process of physiotherapy.			

Study programme competences / results	
Code	Study programme competences / results
A4	Coñecer o concepto anatómico e funcional da enfermidade e a clasificación das enfermidades. Describir a patoloxía dos diferentes órganos, aparatos e sistemas. Semioloxía médica. Dermatoloxía. Reumatoloxía. Traumatoloxía. Neuroloxía. Endocrinoloxía. Procesos vasculares patolóxicos. Patoloxías sistémicas con repercusión no pé.
A11	Coñecer os fundamentos da biomecánica e a cinesiología. Teorías de apoio. A marcha humana. Alteracións estruturais do pé. Alteracións posturais do aparato locomotor con repercusión no pé e viceversa. Instrumentos de análise biomecánico.
A23	Coñecer e aplicar os métodos físicos, eléctricos e manuais na terapéutica das distintas patoloxías do pé. Vendaxes funcionais. Terapia da dor e inflamación no pé.
A39	Desenvolver as técnicas de exploración física.
A45	Desenvolver a capacidade de establecer protocolos, executalos e avalialos.
A48	Desenvolver as habilidades sociais para a comunicación e o trato co paciente e outros profesionais.
A49	Establecer intercambio de información cos distintos profesionais e autoridades sanitarias implicadas na prevención, promoción e protección da saúde.
A50	Prescribir, administrar e aplicar tratamentos farmacolóxicos, ortopodolóxicos, físicos e quirúrxicos.
A54	Manter actualizados os coñecementos, habilidades e actitudes.
A55	Garantir a calidade asistencial na práctica da podoloxía.
A60	Integrar os coñecementos, habilidades, destrezas, valores e actitudes adquiridos durante o itinerario curricular do alumno.
A62	Adquirir habilidades de traballo en equipo como unidade na que se estruturan de forma uni ou multidisciplinar e interdisciplinar os profesionais e demais persoal relacionados coa prevención, avaliación diagnóstica e tratamento podolóxico.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B4	Traballar de forma autónoma con iniciativa.
B5	Traballar de forma colaborativa.
B7	Comunicarse de maneira efectiva nun entorno de traballo.
B12	Capacidade de xestión da información.
B13	Traballo en equipo de carácter interdisciplinar.
B19	Capacidade de aplicar os coñecementos na práctica.
C1	Expresarse correctamente, tanto de forma oral coma escrita, nas linguas oficiais da comunidade autónoma.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.

Learning outcomes			
Learning outcomes	Study programme competences / results		
Be able to apply the techniques of clinical examination of the musculoskeletal system in supine position, static bipedestation and dynamic for the diagnostic of the foot dysfunctions	A11		
Be able to apply the protocol of analytical examination of foot and ankle complex, as well as to identify its possible relation with the superjacent levels (knee, hip, pelvic belt and raquis), integrating these appearances in the treatment of the more frequent foot dysfunctions.	A4 A11 A39 A45 A49 A50 A54 A55 A60 A62	B1 B3 B4 B5 B7 B19	C1 C6
Be able to identify the physiotherapy techniques (curative or palliative) employees in the treatment of the foot dysfunctions.	A11 A39 A48 A49 A50 A62	B1 B2 B3 B5 B7 B13	C6
To know the principles and indications of the physical agents used in the treatment of the foot dysfunctions.	A23 A45 A50 A55 A60 A62	B2 B12 B19	C6
Be able to apply some physical agents in the treatment of the foot dysfunctions.	A23 A45 A50 A60	B2 B3 B19	C6
Know the therapeutic foundations of the handle of the patient with pain	A11 A23 A45 A50 A60	B3 B12	C6

Contents	
Topic	Sub-topic
UNIT 1: Foot functional assessment	Subject 1. Foot anatomy and biomechanic. Subject 2. General assessment. Subject 3. Foot functional assessment (I): Anamnesis, static load assessment. Subject 4. Foot functional assessment (II): Static without load assessment. Subject 5. Foot functional assessment (III): Dinamic assessment.
Unit II: Functional reeducation and physiotherapy in adult foot disorders	Subject 6. Functional reeducation and physiotherapy in foot-lower limb rotational disorders and dysfunctions. Stress tissue model. Subject 7. Functional reeducation and physiotherapy in rearfoot, midfoot and forefoot disorders and dysfunctions

Unit III: Functional reeducation and physiotherapy in childhood foot disorders	Subject 8. Functional reeducation and physiotherapy in: equinovarus foot deformity, metatarsus adductus and flat foot in children.
Unit IV: Functional reeducation and physiotherapy in foot dysfunctions secondaries to sistemic disorders.	Subject 9. Functional reeducation and physiotherapy in foot dysfunctions secondaries to diabetes mellitus. Tema 10. Functional reeducation and physiotherapy in in foot dysfunctions secondaries to rheumatoid arthritis.
Practice I. Foot functional assessment	1.- Foot and Ankle Topographical examination. 2.- Static load assessment. 3.- Static without load assessment. 4.- Dinamic assessment. Gait.
Practice II. Functional reeducation and physiotherapy in adult foot disorders	5. Case study: pronated foot. 6. Case study: supinated foot. 7. Case study: talalgia. 8. Case study: calcaneous fracture. 9. Case study: metatarsalgia (Morton´s perineural fibrosis). 10. Case study: hallux valgus. 11. Case study: hallux rigidus.
Practice III. Functional reeducation and physiotherapy in childhood foot disorders	12.1. Case study: equinovarus foot and metatarsus adductus deformity 12.2. Case study: flat foot.
Practice IV. Functional reeducation and physiotherapy in foot dysfunctions secondaries to sistemic disorders.	13.1. Case study: diabetes mellitus foot. 13.2. Case study: rheumatoid arthritis foot.

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A4 A11 A23 A54 A55 A60 A62 B1 B3 C6	12	12	24
Laboratory practice	A23 A39 A45 A50 A54 A55 A60 B2 B4 B5 B13 B19	16	16	32
Directed discussion	A11 A23 A48 A49 A62 B1 B3 B7 C1	1	0	1
Case study	A50 A54 A55 A60 B2 B3 B12	12	36	48
Workbook	A11 A49 A60 B1 B3 B12 C1	0	20	20
Mixed objective/subjective test	A11 A23 A60 B3 B12 C1	2	18	20
Introductory activities	A60 B3 C1	2	0	2
Personalized attention		3	0	3

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Oral exhibition complemented with the use of audiovisual means and the introduction of some questions headed to the students, with the purpose to transmit knowledges and facilitate the learning.

Laboratory practice	<p>Methodology that allows that the students learn sure enough through the realisation of activities of practical character, such like demonstrations, exercises, experiments and investigations.</p> <p>In this matter the practical modules will centre by a part in the static exploration-dynamic of the complex articulate foot-ankle as well as his relation with the global assessment of the superjacent levels. Later they will experience some of the therapeutic technicians that give answer to the possible dysfunctions that result of the process of assessment, fundamentally consistent in the technician of taping (rigid, elastic and neuromuscular) as well as in the correct application of other physical agents.</p>
Directed discussion	<p>Methodology that allows that the students learn sure enough through the realisation of activities of practical character, such like demonstrations, exercises, experiments and investigations.</p> <p>Technician of dynamics of groups in which the students argue of free form, informal and spontaneous on a subject, especially the resolution of a problem generally of pathomechanics topic relative to clinical field, proposed and coordinated by the moderador of the debate, in this case the professor.</p>
Case study	<p>Methodology where the students confront in front of the description of a specific situation that arouses a problem that has to be comprised, valued and resolved by a group of students, through a process of discussion.</p>
Workbook	<p>Group of texts and documentation written that they were collected and/or edited with the aim to serve like source of profundización of the contents worked through other methodologies.</p>
Mixed objective/subjective test	<p>Regarding questions of essay, collects open questions of development. Besides, regarding objective questions, can combine questions of multiple answer, of ordenación, of brief answer, of discrimination, to complete and/or of association.</p>
Introductory activities	<p>After the presentation of the subject, will establish a colloquium in which it will treat of identify which are the interests of the students in relation to the topics, its possible practical utility, as well as the initial knowledges of which splits .</p> <p>Activities that carry out before initiating or process of education-learning, with the purpose to know the competitions, student's interests and/or motivations for the attainment of the aims that pretend reach, linked to a formative program. With her it pretends obtain notable information that allow to articulate the teaching to favour an effective and significant learning, that split of the previous knowledges of the students.</p>

Personalized attention

Methodologies	Description
Laboratory practice Directed discussion Case study	<p>In the laboratory class, the professor supervises of individual form the correct execution of the test ant technicques by students.</p> <p>In the discussion directed and in the study of clinical cases, the professor is the attendant to moderate it debate and to propose them questions that promote it, as well as that each of the students take part and benefit of the ideas that all aportan.</p>

Assessment

Methodologies	Competencies / Results	Description	Qualification
Laboratory practice	A23 A39 A45 A50 A54 A55 A60 B2 B4 B5 B13 B19	The assessment of the practices of laboratory does reference fundamentally to the attitude and active participation and with exploitation of the same, what translates in the correct execution and in the degree of improvement reached in the techniques taught.	10
Case study	A50 A54 A55 A60 B2 B3 B12	Delivery in time and form of the resolutions of clinical cases posed along the course, and that will request with antelación sufficient for his realisation or will realise during the face-to-face hours (interactive classes).	30
Mixed objective/subjective test	A11 A23 A60 B3 B12 C1	The mixed proof will consist in a combination of questions type test of only answer and without penalty by error committed, and one or several short questions about the assessment and/or resolution of a clinical case posed during the course.	50

Guest lecture / keynote speech	A4 A11 A23 A54 A55 A60 A62 B1 B3 C6	Exposición oral complementada co uso de medios audiovisuais e a introdución de algunhas preguntas dirixidas aos estudantes, coa finalidade de transmitir coñecementos e facilitar a aprendizaxe. Valorarase fundamentalmente a asistencia e participación activa nas mesmas, a través da entrega puntual de pequenas probas de coñecemento de resposta inmediata (metodoloxía socrative) que facilitan a asimilación das ideas clave.	10
--------------------------------	--	---	----

Assessment comments

To pass this subject will be required:

1. The assistance it a minimum of 70% of the practical sessions
2. Only it contemplates the possibility of a 10% of fouts of assistance to practical sessions without documents.
3. Obtain a calificación upper to 5 points on 10 in the mixed test. This test will have, with general character, a maximum time of execution of 1 hour.

No they contemplate methodologies of assessment different stop those partial time students or in second enrollment and back, independently that conserve the calificación obtained in the evaluation continued of the practical and interactive block. It Will assign the calificación of No Presented to the students that no present to the mixed test, independently that conserve the calificación obtained in the evaluation continued of the practical and interactive block.

The students that reach a calificación equal or upper to 9.0/10 could opt to the mention of with honor distinction, according to the rates established in the article 21 of the "Norms of evaluation, review and claim of the qualifications of the studies of degree and master university" of wool UDC. It enrolls of honour will be granted anyway to the global higher calificación/s.

Recommendations

Subjects that it is recommended to have taken before

Specific Anatomy of the Lower Limb/750G02002

Biomechanics of the Lower Limb/750G02013

Physical Podiatry/750G02023

Subjects that are recommended to be taken simultaneously

Practicum 3/750G02035

Final Dissertation/750G02036

Subjects that continue the syllabus

Final Dissertation/750G02036

Other comments

Ao tratarse dunha materia que habitualmente cursan estudantes de cuarto curso, recoméndase que se curse simultaneamente coa materia Prácticum 3, de forma que poidan aplicar novos coñecementos ao contexto clínico-asistencial.
