General description	To achieve that the electrical ins	tallations and the	receptors that c	onstitute them, work of	f a correct way and that work of an	
	efficient way from an electrical point of view, have to firstly identify and afterwards quantify of a correct way the					
	ineficiencias that can find us presents in any electrical system, such as the desfases between the tension and the curren the fault of symmetry and the fault of linealidad in his circuits, once established these ineficiencias, showed the devices					
	that allow us correct them, so that	at it attain an imp	rovement in the	efficiency of the installa	ation or circuit.	

	Study programme competences / results
Code	Study programme competences / results
A1	Análise e aplicación de metodoloxías e normativa para unha xestión eficiente da enerxía.
В3	Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a
	menudo en un contexto de investigación.
B6	Buscar y seleccionar alternativas considerando las mejores soluciones posibles.
B7	Desarrollar las capacidades de análisis y síntesis; fomentar la discusión crítica, la defensa de argumentos y la toma de conclusiones.
B11	Adquirir nuevos conocimientos y capacidades relacionados con el ámbito profesional del máster.
B15	Conocer la legislación vigente y reglamentación aplicable al sector de las energías renovables y de la eficiencia energética.
C3	Aplicar una metodología que fomente el aprendizaje y el trabajo autónomo.

Learning outcomes			
Learning outcomes			amme
	cor	npetenc	es/
		results	
The student will know to identify the diverse phenomena (reactive, disequilibriums, harmonic), that can find in an electrical	AJ1	BC3	
installation, that diminish his efficiency.		BC11	
		BC15	
The student will know to quantify the importance of the ineficiencias of the system and proceed to pose the best solution for	AJ1	BC6	CC3
the same, so that the system was from the electrical point of view more efficient, all this attending to the norms and		BC7	
reglamentación valid.			

Contents				
Topic Sub-topic				
Introduction to the ineficiencias in the electrical systems.	Introduction.			
	The Unified Theory of Electrical Power.			
Compensation of the reactive power. Introduction.				
	Characterisation and measure of the reactive energy.			
	Devices of compensation of the cos fi.			

Balanced three- and four-wire electrical systems.	Introducción, Theorem of Stokvis-Fortescue.
·	Characterization and measurement of power imbalances
	Equivalent circuits of receptors and installations.
	Elimination of imbalances. Filters of sequence.
Non linear loads.	Introduction.
	Origin of non-sinusoidal periodic waves.
	Factors periodic signals.
	Limits of harmonics.
	Distortion power.
Correction disturbances.	Introduction.
	UNE-EN-61642. Filters of harmonic.
	Filters of Rejection.
	Filters of Absorption.

	Methodologies
Methodologies	Description
Objective test	Proof of evaluation where the student will have to show his degree of learning of an objective way.
Laboratory practice	You practise them of laboratory are a fundamental activity for the learning of this matter. They consist in practical suppositions
	where the student will have to show the theoretical knowledges purchased
Supervised projects	They develop tasks, that allow to settle the theoretical and practical knowledges, that can go from formulating problems and
	brief works the simple until others with some complexity.
Guest lecture /	Face-to-face activity in the classroom, where will establish the fundamental concepts of the matter. It will realise by means of
keynote speech	an oral exhibition, complemented with audiovisual and multimedia means, is whose end transmit the knowledges and facilitate
	the learning.

	Personalized attention					
Methodologies	Description					
Supervised projects	They realise in the corresponding tutorías, where to initiative of the student resolve, or clear the possible doubts.					
Guest lecture /						
keynote speech						
Laboratory practice						

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		

Supervised projects	B3 C3	Will be able to realise to varied cape works tutelados along the course, being his	30
		compulsory delivery and that treated on problems or practical suppositions related	
		with the matter.	
		The works tutelados, are 35% of the final note of the matter, that will be added to the	
		note obtained in the objective proof, whenever this was described with at least 3.0	
		points on 10.0 points.	
Objective test	A1	In the dates fixed officially by the centre, realised this final proof.	40
		The proof can alternate ask type problem or theoretical questions, and represents	
		40% of the final note of the matter.	
Laboratory practice	B6 B15	The practical are compulsory, and is necessary to have them realised to be able to	30
		surpass the asignatura.	
		The practices represent 30% of the final note of the matter, and added to the note	
		obtained in the theoretical proof whenever this was upper to 3.0 points on 10.0 points.	

Assessment comments

All the activities that contribute to the final note of the student, will be qualified on 10.0 points.
