

Teaching Guide

Teaching Guide				
Identifying Data				2018/19
Subject (*)	Genomics		Code	610441014
Study programme	Mestrado Universitario en Bioloxía Molecular , Celular e Xenética			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	2nd four-month period	First	Optional	3
Language	SpanishGalicianEnglish			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Vila Taboada, Marta	E-mail	marta.vila.taboada@udc.es	
Lecturers	Becerra Fernandez, Manuel Vila Taboada, Marta	E-mail	manuel.becerra@udc.es marta.vila.taboada@udc.es	
Web				
General description	Genomics applies recombinant DNA, Sanger DNA sequencing and Next Generation Sequencing methodology, and bioinformatics to sequence, assemble, and analyze genomes. Diciplines in genomics encompass several areas of study, including structural and functional genomics, comparative genomics, and metagenomics, and have led to an "omics" revolution in modern biology.			

Study programme competences

Code	Study programme competences
A3	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B5	Correct oral and written communication on scientific topics in the native language and at least in another International diffusion language.
B9	Skills of preparation, show and defense of a work.
C2	Skills of dominating the oral form expression and compression and written of a foreign language.
C3	Skills of Using basic tools of the information technologies and communications (ICT) necessary to the exercise of his profession and for the apprenticeship over his life.
C8	Considering the importance that the investigation has, the innovation and the technological development in the socioeconomic advance and cultural of the society.

Learning outcomes

Learning outcomes	Study programme competences		
To learn the basics of the different molecular techniques used in genomics, with particular emphasis in NGS	AR3 AR11		CC3
To acquire an updated view about the current scope and future perspectives of structural, functional and evolutionary genomics	AR3 AR11	BR1 BR5 BR9	CC2 CC8
To understand how genomes evolve and how molecular and bioinformatic tools are used for that purpose	AR3 AR11	BR1 BR5 BR9	CC2 CC8
DNA microarrays: experimental set up and data analysis.	AR3 AR11		

Contents

Topic	Sub-topic
-------	-----------

The Human Genome Project	History and results
Whole Genome Sequencing	Mate-pair libraries Annotation Comparative genomics Palaeogenomics
Next Generation Sequencing (NGS)	Platforms Paired-end libraries Introduction to data analysis
Metagenomics	Metabarcoding
Clinical genomics	Amplicon-seq Panel-seq Exome-seq CGH-array Pharmacogenomics
Single Nucleotide Polymorphisms (SNPs)	Genome wide association studies (GWAS) Digital genetic testing
Functional genomics	Transcriptome analysis: microarrays and NGS (RNA-seq) ENCODE Epigenomics
Computer lab	1. Using GALAXY for genomic analysis 2. Gene expression analysis and microarrays

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
ICT practicals	A3 A11 B1 B5 B9 C2 C3	7	21	28
Guest lecture / keynote speech	A3 A11 B1 C8	14	28	42
Objective test	A3 A11 B1 C8	2	0	2
Personalized attention		3	0	3
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
ICT practicals	Our 7-hour, computer lab curriculum was developed to accompany the lecture course in Genomics. The students work on their own web-based investigations and present their results to each other (active learning).
Guest lecture / keynote speech	The instructors explain the main contents of each topic interacting as much as possible with the students.
Objective test	Written exam.

Personalized attention	
Methodologies	Description
ICT practicals	Instructors will typically be available via email/SKYPE. Students can arrange for in-person tutoring sessions.

Assessment			
Methodologies	Competencies	Description	Qualification
Objective test	A3 A11 B1 C8	In order to pass the subject, all students will have to score at least 28 (out of 70) points in a multiple choice test and/or short-answer questionnaire.	70

ICT practicals	A3 A11 B1 B5 B9 C2 C3	Attendance to computer labs is mandatory. In order to pass the subject, all students will have to score at least 15 (out of 30) points in a hands-on exam: a set of bioinformatic exercises to be solved using the software introduced during the computer labs.	30
----------------	--------------------------	---	----

Assessment comments

Students scoring at least 50 (out of 100) points but not reaching the aforementioned thresholds (ICT practicals and Objective test) will be awarded a 4.5 (out of 10) score. When resitting, they can choose to take both exams or only the failed one.

Mark "A with distinction" will only be awarded to outstanding students passing the subject in May.

Students will be scored as "ABSENT" (Non presentado) only when not involved in any of the assessed activities.

In the case of exceptional circumstances, lecturers may assist the student to improve his/her learning process and/or catch up on missed work/assessments. The student is responsible for liaising with his/her lecturer to organise this assistance by e.g. applying for: an extended deadline to present his/her work or taking an exam in a different date. The coordinator can request evidence about the reason for such an application.
