

Teaching Guide				
Identifying Data				2018/19
Subject (*)	Molecular Biology	Code	610509117	
Study programme	Mestrado Universitario en Investigación Química e Química Industrial (Plan 2017)			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	Yearly	First	Optional	3
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Biología			
Coordinador	Lamas Maceiras, Mónica	E-mail	monica.lamas@udc.es	
Lecturers	Cerdan Villanueva, Maria Esperanza	E-mail	esper.cerdan@udc.es	
	Lamas Maceiras, Mónica		monica.lamas@udc.es	
Web	www.usc.es/gl/centros/quimica/curso/master.html			
General description	This course contains basic and fundamental concepts of research methods on biological processes that are performed on living cells.			

Study programme competences / results	
Code	Study programme competences / results
A1	Define concepts, principles, theories and specialized facts of different areas of chemistry.
A3	Innovate in the methods of synthesis and chemical analysis related to the different areas of chemistry
A4	Apply materials and biomolecules in innovative fields of industry and chemical engineering.
B1	Possess knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often within a research context
B4	Students should be able to communicate their conclusions, and the knowledge and the reasons that support them to specialists and non-specialists in a clear and unambiguous manner
B5	Students must possess learning skills to allow them to continue studying in a way that will have to be largely self-directed or autonomous.
B7	Identify information from scientific literature by using appropriate channels and integrate such information to raise and contextualize a research topic
B10	Use of scientific terminology in English to explain the experimental results in the context of the chemical profession
B11	Apply correctly the new technologies to gather and organize the information to solve problems in the professional activity.
C1	CT1 - Elaborar, escribir e defender publicamente informes de carácter científico e técnico
C3	CT3 - Traballar con autonomía e eficiencia na práctica diaria da investigación ou da actividade profesional.
C4	CT4 - Apreciar o valor da calidade e mellora continua, actuando con rigor, responsabilidade e ética profesional.

Learning outcomes			
Learning outcomes		Study programme competences / results	
Knowing the basics for the isolation , cloning , expression and purification of proteins.		AC1	BC1 CC1
Learn the basic techniques used to visualize biological processes in cell		AC3	BC4 CC3
		AC4	BC5 CC4
			BC7
			BC10
			BC11

Contents	
Topic	Sub-topic

<p>ITEM 1. Handling and DNA sequencing.</p> <p>1. Sense of the subject (Introduction)</p> <p>This topic will address the description of the main tools and methods to manipulate genetic information and verify that the operations have been successful and have been conducted as they are designed .</p>	<p>2. Wording of the subject.</p> <p>Restriction enzymes and cloning vectors hybridization for the detection of specific sequences, PCR, DNA sequencing.</p> <p>3. Bibliography</p> <ul style="list-style-type: none"> - Molecular Biology of the Cell fifth edition (2008) . Alberts et al. Garland Science. Chapter 8. - Molecular Biology fourth edition (2008) . Robert F. Weaver. McGraw -Hill International Edition. Chapters 4 and 5. <p>4. Activities to develop.</p> <p>During the development of the subject practical cases that students must solve using the knowledge gained will arise. It could also be considered that students will read scientific articles related to the topic for exhibition / public presentation.</p>
<p>ITEM 2. Techniques for obtaining and analyzing proteins.</p> <p>1. Sense of the subject (Introduction)</p> <p>We look at how, using the techniques seen in item 1, we can produce and purify proteins in the lab for testing its activity, determine its structure, etc.</p>	<p>2. Wording of the subject.</p> <p>Recombinant proteins , labeling of proteins, protein expression and purification , and protein sequencing analysis .</p> <p>3. Bibliography</p> <ul style="list-style-type: none"> - Molecular Biology of the Cell fifth edition (2008) . Alberts et al. Garland Science. Chapter 8. - Molecular Biology fourth edition (2008) . Robert F. Weaver. McGraw -Hill International Edition. Chapters 4 and 5. <p>4. Activities to develop.</p> <p>During the development of the subject practical cases that students must solve using the knowledge gained will arise. It could also be considered that students will read scientific articles related to the topic for exhibition / public presentation.</p>
<p>ITEM 3. Viewing biological processes.</p> <p>1. Sense of the subject (Introduction)</p> <p>In this issue the main methods of display structures and biological processes, both in vivo and in vitro will be explained.</p>	<p>2. Wording of the subject.</p> <p>Chemical markers , GFP and fluorescent fusion proteins , optical microscopy (confocal, super-resolution, real-time), electron microscopy.</p> <p>3. Bibliography</p> <ul style="list-style-type: none"> - Molecular Biology of the Cell fifth edition (2008). Alberts et al. Garland Science. Chapter 9. <p>4. Activities to develop.</p> <p>During the development of the subject practical cases that students must solve using the knowledge gained will arise. Also scientific work to read an comment by the students.</p>

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Problem solving	A1 A4 A3 B1 B5 B11 C3	7	10	17
Seminar	B4 B7 B10 C1 C4	2	8	10
Mixed objective/subjective test	A1 A4 B1 B4 C3 C4	1	36	37
Guest lecture / keynote speech	B5 C4	11	0	11
Personalized attention		0		0

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description

Problem solving	Theoretical / practical class in which the teacher propose and students solve applications of theory, problems and applied questions. It may also include the presentation by students of a topic related to the subject. Small group interactive classes seminars , " S " in the timetables)
Seminar	Tutorials in very small group ("T" in the timetables) planned by the teacher and coordinated by the Tutoring Center. In general, each student will account for two hours per semester and subject. Monitoring activities as directed exercises, clarification of doubts about theory, problems, exercises, readings or other proposed tasks. Also the presentation, discussion or comments in small groups. Attendance at these classes is mandatory.
Mixed objective/subjective test	Test to evaluate skills and knowledge
Guest lecture / keynote speech	Lesson taught by the teacher who may have different formats (theory, problems and / or general examples, general guidelines on the matter ...). The teacher may have the support of audiovisual and computer media but, in general, students do not need to handle them in class.

Personalized attention

Methodologies	Description
Problem solving Seminar	Students with part-time dedication or waiver of presence should contact the teachers of the subject in the early going to establish a schedule of activities to acquire and evaluate in a complementary way the competences.

Assessment

Methodologies	Competencies / Results	Description	Qualification
Guest lecture / keynote speech	B5 C4	Evaluation of attendance and participation	10
Problem solving	A1 A4 A3 B1 B5 B11 C3	Continuous assessment	5
Seminar	B4 B7 B10 C1 C4	Continuous assessment	15
Mixed objective/subjective test	A1 A4 B1 B4 C3 C4	Final evaluation	70

Assessment comments

<p>Evaluation procedure.</p> <p>The assessment of this will be done through continuous assessment and the completion of a final exam. The access to the exam requires participation in at least 80% of classroom and teaching compulsory attendance activities (seminars and tutorials).</p> <p>Continuous assessment (N1) will weigh 40% in the total of the course and consist of two components: interactive small group classes (seminars) and interactive classes in very small groups (tutorials). Seminars and tutorials may include exercises and assignments made in person, exercises submitted to the teacher or public presentations of topics previously selected.</p> <p>The final exam (N2) will cover the entire content.</p> <p>The student's score, will be obtained as a result of applying the following formula:</p> <p>End = maximum Note (0.4 x 0.6 x N1 + N2, N2)</p> <p>N1 is the corresponding to the continuous assessment (scale 0-10) and N2 numerical final exam (0-10 scale numerical grade).</p> <p>Students with part-time dedication or waiver attendance may choose to be evaluated in a final exam if they do not qualify for continuous evaluation.</p>

Recommendations

Subjects that it is recommended to have taken before

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

It is necessary to know the different kinds of biomolecules and processes of transfer of genetic information in cells. It is very important to attend the lectures.

It is essential to keep the study of matter " up to day".
