General description	The aim of this subject is the study	The aim of this subject is the study of the sampling strategies, sample pre-treatment and treatment methodologies and				
	separations techniques. Basic fundamentals of electroanalytical techniques (condutometry and potentiometry) are also					
	enclosed in the scope of this subject	ct				

	Study programme competences / results
Code	Study programme competences / results
A7	Knowledge and application of analytical methods
A15	Ability to recognise and analyse new problems and develop solution strategies
A16	Ability to source, assess and apply technical bibliographical information and data relating to chemistry
A17	Ability to work safely in a chemistry laboratory (handling of materials, disposal of waste)
A18	Risk management in relation to use of chemical substances and laboratory procedures
A19	Ability to follow standard procedures and handle scientific equipment
A20	Ability to interpret data resulting from laboratory observation and measurement
A21	Understanding of qualitative and quantitative aspects of chemical problems
A22	Ability to plan, design and develop projects and experiments
A23	Critical standards of excellence in experimental technique and analysis
A24	Ability to explain chemical processes and phenomena clearly and simply
A25	Ability to recognise and analyse link between chemistry and other disciplines, and presence of chemical processes in everyday life
B2	Effective problem solving
В3	Application of logical, critical, creative thinking
B4	Working independently on own initiative
C1	Ability to express oneself accurately in the official languages of Galicia (oral and in written)
C6	Ability to assess critically the knowledge, technology and information available for problem solving
C8	Understanding role of research, innovation and technology in socio-economic and cultural development

Learning outcomes

Methodologies	
Methodologies	Description

Laboratory practice	In the laboratory sessions students will carry out the application of the theoretical concepts studied in the classroom. The scripts will have questions that the students will have to answer and deliver once finished the practices. During laboratory sessions, and on a simultaneous way to the realisation of the experiments, the student will have to elaborate a diary of laboratory that collect the calculations, the experimental procedures and the necessary settings. The professor will review the notebook of each student in each laboratory session.
Seminar	On site activities for small to very small groups in which the students must participate actively. Seminars will be mostly devoted to solve examples of real problems and numerical excercises. The problems are discussed and solved by the students following the guidance of the instructor.
Guest lecture / keynote speech	The teacher will present the fundamental contents of each of the topics. For better learning, students will have to advance the development of these sessions teaching materials suitable for your personal preparation.
Mixed objective/subjective	The test to evaluate the knowlege gained by the student will include both theoretical and numerical questions.
test	

	Personalized attention		
Methodologies	Description		
Seminar	The work developed by students in seminars and laboratory practice involves personal attention from the teacher both in the		
Laboratory practice	resolution of questions as a guide to the preparation thereof, correction questionnaires, understanding fault indication etc.		
	In addition, Professor mention to the student individually to discuss in more depth how their learning progress of matter.		
	Moreover, all students can consult the teacher any aspect of the subject in the tutorial schedule established for this purpose		
	Students being recognized officially as partial-time and entitled not to attend the lectures will be attended in a tutorships		
	regime (set hour with teacher in advance).

	Results		
Seminar	A7 A15 A20 A21 A22	It will assess the student's participation, the resolution of problems and numerical	10
	A24 A25 B2 B4 C1	excercises, compliance dates for delivery or revision. Some short tests will be done	
		periodically in the seminar sessions and /or guest lecture to assess the evolution of	
		the student.	
Laboratory practice	A7 A15 A17 A18 A19	It will assess the performance of questions, abilities and skills of students in the	20
	A20 A22 A23 A24 B2	experimental work, their ability to interpret the results, etc.	
	B3 B4 C6 C8		
Mixed	A7 A15 A20 A24 B2	It will assess the student's ability to express, summarize and develop theoretical	70
objective/subjective	B3 B4 C1	aspects of the subject and the resolution of problems and numerical exercises.	
test			

Assessment comments

To pass the subject three basic requirements are needed:

- 1.-The laboratory sessions are mandatory.
- 2.-Reach a minimum qualification of 5 over 10 in the laboratory practice and in each mixed test.
- 3. Students who do not participate on the problem solving and do not carry out the short answer questions will score 0 in these sections (10%).
- -In the first and second time, students who not reach 5 points in practices evaluation, have the opportunity to, in addition to the mixed test, perform a specific test related to the labs. The score of this test especcífica replaced the grade obtained in practice for the overall rating.

The student will obtain the qualification of No Presented when the student does not assist to laboratory sessions and to the final mixed exam.

In the context of "continuous evaluation" the "second opportunity of July" is a second opportunity of realisation of the mixed test. Therefore, the laboratory practice, and seminars, will keep the qualifications obtained along the course, whereas the qualification of the mixed test of second opportunity will substitute to the one obtained in the mixed test of the first opportunity.

The students evaluated in the "second opportunity" only will be able to opt to matrícula of honour if the maximum number of these for the corresponding course has not covered in its whole in the "first opportunity".

Regarding to the next academic courses, the process of education-learning included into the evaluation, is referred to an academic course and, therefore, would go back to begin, including all the activities and procedures of evaluation that are programmed for the new course.

- For students with recognition of dedication and part-time academic exemption waiver assistance, conducting laboratory practices are mandatory and it will be provided within the flexibility to allow coordinating schedules and material and human resources. They shall be deemed exempt from the keynote sessions while assistance will be provided to the greatest number of seminars. Therefore, these students will be evaluated by the grades obtained in laboratory practices (20%), in the mixed test (70%) and in the activities of the seminars (10%). If they can not attend the seminars will make a mentored work.
