|   | Contents   |
|---|--|
| Торіс   | Sub-topic  |
| Chapter 1. Environmental Analytical Chemistry.              | Scope. Definitions and types of pollution. The need for Analytical Chemistry to study    |
|   | the environmental problems. Types of analyses. Basic knowledge on environmental          |
|   | legislation.   |
| Chapter 2. Main atmospheric pollutants. Analytical control. | Atmospheric pollution: emision and inmision. Major pollutants and their sources. Their   |
|   | effects on health and the environment. Parameters to state the quality of the air.       |
|   | Surveillance and control nets. Legislation. Sampling and Analytical research of the      |
|   | main atmospheric pollutants.   |
| Chapter 3. Analytical control of aquatic pollution.         | Physico-Chemical characterization of natural water. Main parameters to define the        |
|   | water quality. Major pollutants and their sources. Legislation. Sampling: water,         |
|   | sediments and living organisms. Analytical research of the main pollutants in aquatic    |
|   | environments.  |
| Chapter 4. Main pollutants in soils and vegetables: their   | Soils as a receptor of residues and spillages. Origin, transport and fate of main        |
| sources and the effects they produce. Analytical control.   | pollutants. Legislation. Sampling: soils and vegetation. Analytical research of the main |
|   | pollutants.  |
| Chapter 5. Quality in Analytical Laboratories.              | Definition of Quality and Quality in an analytical laboratory. The customer's            |
|   | perspective. The within-laboratory perspective. Quality as a process.                    |
| Chapter 6. International models to Quality Management.      | Formal definition of Quality. ISO 9000, ISO 17025. Main aspects. Some usual              |
|   | difficulties in their applications. Some critical aspects that determine quality in a    |
|   | laboratory. Basic management tools: Pareto's diagram, Ishikawa's plots, afinity charts.  |
|   | Control charts. other tools.   |
| Chapter 7. A brief introduction to the Environmental        | Taguchi's idea. Role of the companies in environmental protection. Brief introduction    |
| Management systems.   | to ISO 14000 and the EU EMAS system.   |
| Laboratory classes  | They try to mimic the overall process from sampling to reporting results. The            |
|   | measurements of some common environmental quality parameters will be carried out.        |

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

|                      | Methodologies  |
|----------------------|--|
| Methodologies        | Description  |
| Seminar              | Seminars will complement the theoretical lessons. They will be focused on the solution of numerical problems and other             |
|                      | quereis that are to be delivered to the students. Main focus will be on addressing real issues that are required to state the      |
|                      | quality of air, soils or water. Some discussions will be hold on the critical issues that determine the quality of a laboratory.   |
| Laboratory practice  | The theoretical concepts are to be applied to a true problem. Experimental results will be confronted to legislation and a         |
|                      | discussion will be required. Students will be required to deliver a report on the experimental studies carried out. This will      |
|                      | include a report and a critical discussion of the experimental results.  |
| Mixed                | It will be constituted by short questions. Some of them should be scored whereas others must be selected amongst several           |
| objective/subjective | options (type test). Other questions must be answered shortly. Numerical exercises will be included.                               |
| test                 |  |
| Guest lecture /      | It is highly advised that students read the suggested literature, preferably before a given chapter is discussed. The classes will |
| keynote speech       | be delivered using different media. Discussions will be empowered and a deep understanding of the main concepts will be            |
|                      | required. Doubts will be addressed and participation and critical ideas will be requested from the students.                       |

|                     | Personalized attention  |
|---------------------|---|
| Methodologies       | Description   |
| Laboratory practice | The teachers will devote some seminars to work closely with the students. Therefore, participation on those classes is a must.  |
| Seminar             | They are expected to discuss ideas and solve numerical exercises (if necessary, with the teacher's aid). The teachers will also address pupils' doubts in their offices.<br>Students being recognized officially as partial-time and entitled not to attend the lectures will be attended in a tutorship regime (set hour with teacher in advance). |

|                      |                     | Assessment  |               |
|----------------------|---------------------|---|---------------|
| Methodologies        | Competencies        | Description   | Qualification |
| Mixed                | A14 A15 A28 B2 C1   | The exam will consist of short questions, multiple test-type questions, numerical         | 70            |
| objective/subjective |                     | exercises and/or discussion of case-studies.  |               |
| test                 |                     |   |               |
| Laboratory practice  | A17 A19 A23 A26 B7  | The experimental work in the laboratory (ability, actitude, order, atention, etc.), along | 15            |
|                      |                     | with the final report, will be scored.  |               |
| Seminar              | A15 A16 B2 B3 B4 B5 | The level of participation of the student in the classes, along with its ability to solve | 15            |
|                      | B7 C3               | numerical exercises and answer particular questions will be scored.                       |               |

Assessment comments

Students will be evaluated in a continuous way according to their attendance to the scheduled activities, their engagement in the seminars, their discussions on the questions and exercises posed by the teacher (some of which should be delivered in advance), the laboratory practices and the mixed test. Laboratory practices are mandatory, otherwise the subject will not be aproved. At the end of the laboratory practices a report should be delivered. It should contain the analytical procedures, the experimental results and a discussion on them.

## The

"Not presented" score will be obtained in case the student makes less than 25% of the academic activities.

## FIRST

## OPPORTUNITY

To pass the subject it is required to get, at least, 5 points (out of 10) in the mixed test (exam) and, for each and every other activity, at least, 4 points (out of 10), so that the weighted sum reaches -at least- 5 points (out of 10). The subject will not be passed in case the weighted sum reaches 5 points but the score of an activity does not reach 4 points. In this case, the final score of the subject will be fail (4.5 points). SECOND

## OPPORTUNITY

The "second opportunity" should be understood as a

second opportunity for the mixed test (exam). All the original scores associated to practices y seminars will be maintained, only the score of the exam made now will substitute that of the first opportunity. To pass the subject in the second opportunity a minimum score of 5 points (out of 10) in the exam must be obtained, so that the weighted sum of all scores reaches (at least) 5 points (out of 10).

The maxixum score (10, Matricula de Honor) will be obtained by pupils doing the second exam (July) only if that score was not given in the first exam (May-June), according to the Administrative requirements. PARTIAL-TIME

AND/OR EXEMPTED FROM REGULAR ATTENDANCE TO THE LESSONS Students being recognized officially as partial-time and/or exempted from regular attendance to the lessons, will be evaluated only according to their scores on the objective tests (85%) and the laboratory practices (15%). For them, the laboratory practices will be scheduled as flexible as possible, although taking into account the regular timetables, as well as the instrumental and human resources available. This holds for both evaluation opportunities. NEXT COURSES For next courses no score will be maintained and all activities will have to be repeated.

| De commendations  |
|---|
| Recommendations   |
| Subjects that it is recommended to have taken before  |
| Analytical Chemistry 1/610G01011  |
| Analytical Chemistry 2/610G01012  |
| Instrumental Analytical Chemistry 1/610G01013   |
| Instrumental Analytical Chemistry 2/610G01014   |
| Subjects that are recommended to be taken simultaneously  |
| Advanced Analytical Chemistry and Chemometrics/610G01015  |
| Subjects that continue the syllabus   |
| Final Dissertation/610G01043  |
| Other comments  |
| Basic knowledge of classical and (common) instrumental methods of analysis will be required. They correspond to the major techniques studied in   |
| previous semesters (spectrometry, chromatography, electrochemistry, etc). The student should be able to use common informatic tools (spreadsheets |
| text processors, searchs on the web, etc.). Basic knowledge of English will be needed.  |
