

Teaching Guide				
Identifying Data				2018/19
Subject (*)	Laboratory Automation	Code	610G01038	
Study programme	Grao en Química			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Fourth	Optional	4.5
Language	SpanishGalician			
Teaching method	Face-to-face			
Prerequisites				
Department	Química			
Coordinador	Penedo Blanco, Francisco Jose	E-mail	francisco.penedo.blanco@udc.es	
Lecturers	Penedo Blanco, Francisco Jose	E-mail	francisco.penedo.blanco@udc.es	
Web	<a href="https://moodle.udc.es/">https://moodle.udc.es/</a>			
General description	<p>Among the different tasks to perform in a laboratory measurement recording, data analysis and modification of experimental conditions depending on those results are some of the most commonly done. These tasks can be often done automatically and unattended using a PC.</p> <p>Most of the existing equipments in laboratories can be controlled and programmed to carry out its operations without human intervention, and these tasks can be automated through software applications. Different strategies to achieve automation of common tasks will be shown in this subject. The everyday work in a laboratory will be easier that way.</p>			

Study programme competences / results	
Code	Study programme competences / results
A15	Ability to recognise and analyse new problems and develop solution strategies
A16	Ability to source, assess and apply technical bibliographical information and data relating to chemistry
A19	Ability to follow standard procedures and handle scientific equipment
A20	Ability to interpret data resulting from laboratory observation and measurement
A21	Understanding of qualitative and quantitative aspects of chemical problems
A22	Ability to plan, design and develop projects and experiments
A23	Critical standards of excellence in experimental technique and analysis
A25	Ability to recognise and analyse link between chemistry and other disciplines, and presence of chemical processes in everyday life
B2	Effective problem solving
B3	Application of logical, critical, creative thinking
B4	Working independently on own initiative
B5	Teamwork and collaboration
B7	Effective workplace communication
C2	Oral and written proficiency in a foreign language
C3	Ability to use basic information and communications technology (ICT) tools for professional purposes and learning throughout life
C6	Ability to assess critically the knowledge, technology and information available for problem solving
C8	Understanding role of research, innovation and technology in socio-economic and cultural development

Learning outcomes					
Learning outcomes			Study programme competences / results		
To know the basic concepts about equipment control and communication between equipment and PC			A15	B4	C2
			A16	B7	C3
			A19		C8

To know the basic programming elements within the LabVIEW program environment.	A20 A22 A23 A25	B3	C3 C6
To develop procedures for data acquisition and analysis from the instrumentation available in the laboratory.	A19 A20 A21 A22 A23 A25	B2 B3 B5	C3 C6
To process the numerical data obtained from the acquisition, to create final reports of results with the appropriate format considering the experiment and control process.	A20 A22	B3	C3 C6

Contents	
Topic	Sub-topic
-General concepts in system control.	-Basic principles. Types of control design. Discrete systems. Control diagrams. General targets and evaluation criteria. Digital and analog data. Programmable logic controller.
-Introduction to graphical programming using LabVIEW	-Front panel, block diagram, tool bars and pop-up menus. Virtual instruments
-Components of a virtual instrument.	-Controls, indicators and constants. Data-flow execution structures. Data categories in LabVIEW.
-Basic operations with data.	-Logic operators. Mathematical operators. Array and clusters' build-up.
-The use of structures.	-For and While loops. Making decisions with Case structure. Sequences. Formulas. Advanced structures.
-Data representation and storage.	-Graphic representations. Input and output files.
-Advance tasks.	-Creation of subVI's. Local variables and "shift registers". Property nodes. Icon edition and terminal connection.
-Instrument control.	-Types of connections. Instrument control through RS232 connection.

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Guest lecture / keynote speech	A15 A16 A21 A23 A25 B3 B5 C2	7	14	21
ICT practicals	A15 A16 A20 B2 B3 B4 C2 C3 C6	2.5	10	12.5
Laboratory practice	A15 A16 A19 A20 A22 A23 B2 B3 B5 B7 C3 C6 C8	22	44	66
Mixed objective/subjective test	A15 A20 A21 A22 A25 B2 B3 C3 C6	2	10	12
Personalized attention		1	0	1

(\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Lectures where the theoretical concepts are introduced and basic introduction to the use of LabVIEW program is given.

ICT practicals	Sessions where simple exercises are solved in order to become familiar with the use of the program, as well as the application of logical thinking in programming. They may be carried out in the classroom, but they will be conducted mainly via email or moodle app.
Laboratory practice	Laboratory practices where the knowledge acquired is applied to common situations during the use of laboratory equipments.
Mixed objective/subjective test	Final test where the subject knowledge -both theoretical and practical- is evaluated.

## Personalized attention

Methodologies	Description
Laboratory practice ICT practicals	<p>In the ICT practicals, students will solve suggested exercises where the knowledge acquisition will be checked. Doubts and problems will be also clarified. Students with part time or exemption of attendance will carry out these practices online.</p> <p>In the laboratory, prior knowledge will be implemented by designing a control application of laboratory equipment, led step by step by the teacher. These practices will be carried out exclusively in attendance due to the use of specific analysis equipment.</p>

## Assessment

Methodologies	Competencies / Results	Description	Qualification
Laboratory practice	A15 A16 A19 A20 A22 A23 B2 B3 B5 B7 C3 C6 C8	The usefulness and functionality of the designed computerized control application of research equipment will be assessed.	45
ICT practicals	A15 A16 A20 B2 B3 B4 C2 C3 C6	Answers to short online practical questions about the theoretical concepts will be assessed	20
Mixed objective/subjective test	A15 A20 A21 A22 A25 B2 B3 C3 C6	Basic theoretical concepts and instrument control and data manipulation skills will be assessed.	35

## Assessment comments

## Overall:

- Positive final assessment could not be achieved if a mark lower than 5 out of 10 is attained in any of the three methodologies to be evaluated (i.e. ICT practicals, Laboratory practice and Mixed objective/subjective test).
- Minimum mark to successfully pass the subject is 5 out of 10, obtained as a weighted average of the three qualifications achieved.
- Related to the previous two items, in case of an average mark equal or higher than 5 out of 10, but without achieving the minimum mark required in any of the three assessed methodologies, the final mark will appear as FAIL (4.0).
- "Not attended" assessment mark will be applied in case of the student's participation in the assessed activities account for less than 25% of the total score.

## For the second assessment opportunity:

- Any test failed on the first one must be repeated. To bear in mind: Due to the limited time between assessments, the first two tests will be concentrated in a few days, before the Mixed O/S test. Their specific schedule depends on the number of students who have to attend this opportunity, and will be published at the end of the first assessment.
- Marks from the first opportunity with a minimum of 5 out of 10 can be maintained.
- No mark will be retained for subsequent courses, i.e. the teaching-learning process including assessment, will start over, which means that the students must complete all scheduled activities for the new course.
- Students assessed in the retake can only obtain an Honors mark if all the Honors available have not been allocated after the first opportunity assessment.

## For

### any assessment opportunity:

- In the specific case of students with part-time position, or exemption from attendance, the Mixed objective/subjective test may be online, but for the Laboratory practice (see section 6, "Personalized Attention") this is not feasible. Guessing in advance the reasons underlying the unattendance is not possible, therefore the teacher will study each case in order to adapt the assessment of said part.

## Recommendations

Subjects that it is recommended to have taken before

Physical Chemistry 1/610G01016

Physical Chemistry 2/610G01017

Physical Chemistry 3/610G01018

Subjects that are recommended to be taken simultaneously

Advanced Physical Chemistry/610G01020

Subjects that continue the syllabus

Other comments

- Previous knowledge -&gt; Basic analysis and statistic mathematics, i.e. numeric integration, statistics related to linear least squares regression analysis, iterative numerical methods for solving equations.&nbsp;- The information sources are written in English, therefore non English-speaking students should have at least an average level of understanding of this language.
