General description	Physics subject try to teach the ba	asic concepts of phys	ics and its ap	pplicability to Biology.	Those concepts are necessary to
	understand many natural phenomena that will be studied in other fields and subjects of the Biology Grade.			e Biology Grade.	

	Study programme competences		
Code	Study programme competences		
A22	Describir, analizar, avaliar e planificar o medio físico.		
A26	Deseñar experimentos, obter información e interpretar os resultados.		
A30	Manexar adecuadamente instrumentación científica.		
A31	Desenvolverse con seguridade nun laboratorio.		
B1	Aprender a aprender.		
B2	Resolver problemas de forma efectiva.		
В3	Aplicar un pensamento crítico, lóxico e creativo.		
B4	Traballar de forma autónoma con iniciativa.		
B5	Traballar en colaboración.		
B8	Sintetizar a información.		
B10	Exercer a crítica científica.		

Learning outcomes			
Learning outcomes	Stud	y progra	amme
	CO	mpeten	ces
To know the basic physical concepts in the different parts of Physics, as: Mechanics, Fluids, Waves, Thermodynamics,	A22	B2	
Electromagnetism and Optics.			
Know how to relate the physical concepts with the biology phenomena.	A26	B10	
Apply the theoretical knowledge to the resolution of basic physical problems, mainly focused to resolve biologycal phenomena.	A22	B1	
	A26	B2	
		B8	
To know and to use the methodologies, bibliographic sources and technical concepts corresponding to Physics, using the	A30	В3	
scientific method to its study.		B4	
Learn the basic Physics Laboratory techniques, like to measure fundamental physical magnitudes as density, viscosity,	A26	B5	
surface tension, specific heat	A30	B8	
	A31		

Contents

Topic	Sub-topic
Introduction to Physics	Physical Magnitudes
	Measurements, dimensions and units
Vector Analysis	Vectors. Types. Components
	Operations with vectors
	Momentum of a vector
Motion Descripcion	Kinematics. Movement. Characteristics
	Speed and acceleration
	Types of movements.
Motion and Forces	Dynamics. Newton Movement Laws
	Movement Quantity
	Gravity Force
	Types of forces
	Friction
Equilibrium Study	Static Principles
	Center of mass
	Moment of inertia. Steiner Theorem
Biomecanics. Scale Laws	Muscular strength. Momentum
	Scale Laws. Metabolic Rate
Mecanical Energy. Conservation	Work and Power
	Kinetic and Potential Energy
	Energy Conservation
Deformed Media	Elasticity. Hooke's Law
	Traction. Young's Module
	Lateral Contraction. Poisson Coefficient
	Compresibility Coefficient
	Flexion
	Cutting
	Torsion
Ideal Fluids. Statics and Dynamics	Density
	Pressure. Magnitudes, unities and measurement
	Fundamental Equation of Hydrostatics
	Pascal and Archimedes Principles
	Continuity Equation
	Bernouilli`s Theorem. Aplications
Real Fluids	Viscosity
	Fluids Flow modes
	Reynolds' Number
	Laminar Regime. Poiseuille Equation
	Viscosity Measurement. Ostwald Viscometer
	Movement of solids through fluids
Surface Phenomena	Molecular Forces. Surface Tension

Methodologies
Description
The first day of class the teacher will facilitate the program of the subject, the methodology, the criteria of evaluation, as well
as a calendar detailed of each one of the activities. This information remains at hand of the student in the platform Moodle.
We will inform to students the necessary bibliographical data, both for problems, theory and assisted jobs. Thus, they could
revise and increase the aspects explained in the classroom. The individual tutorials will help also in those aspects.
Along the six Laboratory sessions students will work in couples, doing different complete practices. A guide for each practice
will be given to the student, and they will have all necessary material to mount and do them. All time students will be assisted
by its teacher to resolve all doubts and help if necessary.
At the end of practice time, each couple will present a memory including the job performed and the obtained results.
Prior to the Laboratory sessions there will be a room session to explain the basis of experimental uncertainties and graphical
representations.
After the theoretical exposition of each lesson, there will be Seminars (with a reduced number of students) to resolve problems
to apply the theory studied. The proposed problems for each lesson will be given to the students before each of those
sessions as bulletins. There we will include the numerical solution of each problem, to allow students evaluate themselves
after doing them individually. Those bulletins will be of two different types: some of them General (the same for all students of
the three groups), and other complementary bulletins specific for each reduced group. Not all problems will be completely
resolved in the
Seminars, but only those more difficult.
There will be two written exams about the theory and numerical problems saw in classroom. The first one at the middle of the
course and the second one at the end. The students that pass each of those exams will have that part of the subject passed
for the Final exams of June (and Jully).
The basic content of the different parts of the Subject will be explained by the teacher in this sessions, trying to involve
students in the learning process. At the end of each session will be in the Moodle the material used that day to facilitate pupils its study.

Supervised projects Voluntarily the students can do complementary work. That will be do in pairs of students and will be focused in applications of Physics to Biology.

Personalized attention		
Methodologies Description		
Document analysis	Students will be attended individually to help them to understand and resolve all problems related with the subject they can	
Laboratory practice have, including: bibliography, problems of the bulletin, the complementary work In resume all doubts they can have in the		
Supervised projects	study and comprenhesion of physic subject.	
	PART-TIME STUDENTS: these students will receive a specific orientation to schedule their tasks weekly.	

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	A26 A30 A31 B5 B8	The total score of the practices will represent 1.5 points on the final marks and the	15
		evaluation will be done based on the submitted report.	
		Attendance to the previous classroom session and laboratory sessions is a necessary	
		condition to be evaluated, therefore, they are mandatory.	
		Practices will be considered surpassed when reaching a minimum of 0.7 points over	
		1.5.	
Problem solving	A22 A26 B1 B2 B8	The participation in the Seminars will represent 0.5 points on the final marks.	5
Objective test	A22 A26 B2 B10	The score of each of the two tests will be a maximum of 3.5 points on the final overall	70
		mark. In each test the theoretical part will be a maximum of 1 point and therefore the	
		part of problems the remaining 2.5 points.	
		The requirement is to reach a minimum of 1.4 points out of the total of 3.5 points in	
		each partial test in order to have an option to pass the subject.	
Supervised projects	B3 B4 B5 B8 B10	The score of the supervised project will be a maximum of 1 point on the final overall	10
		grade.	

Assessment comments
Addedding to the first of the f

## NOT PRESENTED MARK:

The NP (non presented) qualification will be given to those students that do not attend all Laboratory sessions, and they have not attend to the final tests. Also, if you have only Lab qualification the note would be Fail (no NP). In the July opportunity will be saved the qualifications of Laboratory, Voluntary job and Seminars of problems.

I AB

## PRACTICES:

Since

attendance at sessions of laboratory practice is required to be evaluated condition, failure to attend without just cause (see the list of valid reasons in Artigo 12 das "Normas da avaliación, revisión e reclamación das cualificacións dos estudos de Grao e Mestrado Universitario" vixente) involve the following:

a) a failure

to attend without just cause implies the reduction to 50% of the final mark obtained,

b) more

than one failure to attend without just cause means failing the subject.

Lab

practices will be performed exclusively during the official schedule.

PART-TIME

## STUDENTS:

The

evaluation will be distributed as follows:

a) The lab

practices represent a maximum value of 1.5 points. They are mandatory and can be made within the official calendar on any morning or afternoon shift. In the case of unexcused absence, the same criteria as described above for full-time students will be applied.

b) The supervised

project represents a maximum of 1 point. It is optional.

c) The

objective test represents a maximum value of 7.5 points. It will be performed by partial or official opportunities. The same criteria as described above for full-time students will be applied proportionally.

STUDENTS WITH ACADEMIC ADAPTATIONS:In

the case of students with specific learning needs, and in accordance with the indications of the University Unit for Attention to Diversity (ADI), the teacher will adapt the continuous and compulsory assessment activities so that the student can pass the subject.

## FAILING MARK:

If a student, having an average qualification higher than 5, fails the minimum qualification in any activity, he/she will have a qualification of 4.5, i.e., fail.
