| General description | The increasing amount of information | on available through | the Internet | calls for the efficient pro | ocessing of large amounts of | | |
| | data. This has led to the developme | ent of new storage a | nd processir | ng techniques to deal wit | th huge amounts of data, | | |
| | namely Big Data techniques, that n | aturally adapt to dist | ributed syste | ems. | | | |
| | The main goal of this subject is to le | earn suitable proces | sing techniq | ues for large amounts of | f information in the Big Data | | |
| | world, particularly using the Hadoop | o ecosystem, and co | mpare these | e techniques with the tra | ditional ones employed in HPC | | |
| | environments. This will allow the stu | udent to select the o | ptimal tools | to solve a particular prol | blem. | | |

| | Study programme competences / results |
|------|---|
| Code | Study programme competences / results |
| A1 | CE1 - Define, evaluate and select the most appropriate architecture and software to solve a problem |
| A2 | CE2 - Analyze and improve the performance of a given architecture or software |
| B1 | CB6 - Possess and understand the knowledge that give a baseline or opportunity to be original in the development and/or application of ideas, often in a research environment |
| B2 | CB7 - The students have to know how to apply the acquired knowledge and their capacity to solve problems in new or hardly explored environment inside wider contexts (or multidiscipinary) related to its area of development |
| B6 | CG1 - Be able to search and select useful information to solve complex problems, using the bibliographic sources of the field |
| B8 | CG3 - Be able to maintain and extend properly funded theoretical hypothesis to allow the introduction and exploitation of novel and advanced technologies in the field |
| B10 | CG5 - Be able to work in teams, specially multidisciplinary, and do a proper time and people management and decision taking |
| C1 | CT1 - Use the basic technologies of the information and computing technology field required for the professional development and the long-life learning |
| C4 | CT4 - Value the importance of research, innovation and the technological development in the socioeconomical and cultural advance of the society |
| | |

| Learning outcomes | | | |
|--|-------|----------|-----|
| Learning outcomes | Study | / progra | mme |
| | con | npetenc | es/ |
| | | results | |
| The student will be capable of installing, configuring, and managing the basic software for massive data processing. | AJ1 | BJ2 | CJ1 |
| | AJ2 | BJ6 | |
| | | BJ8 | |
| | | BJ10 | |

| The student will be capable of coding massive data processing applications using domain-specific languages. | | BJ1 | CJ1 |
|---|-----|------|-----|
| | | BJ2 | |
| | | BJ10 | |
| The student will learn about Data Engineering tools (for Intake/Storage/Processing/Visualization). | AJ1 | BJ1 | CJ1 |
| | AJ2 | BJ2 | CJ4 |
| The student will learn the skills to search, select and manage Big data-related resources (bibliography, software, etc.). | AJ1 | BJ1 | CJ1 |
| | AJ2 | BJ6 | CJ4 |

| | Contents |
|-------------------------------------|--|
| Торіс | Sub-topic |
| 1. Introduction to Data Engineering | 1.1 HPC vs Big Data: similarities and differences in data management. |
| | 1.2 Hardware and Software Technologies for High Performance Data Engineering |
| | 1.3 Data Engineering in HPC infrastructures vs. Cloud environments |
| 2. Data Engineering phases | 2.1 Modeling (Formats, Compression, Designing Schemas) |
| | 2.2 Intake (Periodicity, Transformations, Tools) |
| | 2.3 Storage (HDFS and NoSQL DBs, HBase, MongoDB, Cassandra) |
| | 2.4 Processing (Batch, Real-Time) |
| | 2.5 Orchestration |
| | 2.6 Analysis (SQL, Machine Learning, Graphs, UI) |
| | 2.7 Governance |
| | 2.8 Integration with BI (Visualization) |
| 3. Introduccion to Data Analytics | 3.1 Exploratory Data Analytics |
| | 3.2 Introduction to Machine Learning |
| 4 Use cases | 4.1 Applications to Internet of Things (Smart environments and Industry 4.0) |
| | 4.2 Applications to sciences and engineering |

| | Plannin | ng | | |
|---|---------------------------|-------------------------|---------------------------|-------------|
| Methodologies / tests | Competencies / | Teaching hours | Student?s personal | Total hours |
| | Results | (in-person & virtual) | work hours | |

| Methodologies | | |
|---------------------|---|--|
| Methodologies | Description | |
| Workbook | Planned instruction through various teaching materials. | |
| Laboratory practice | Problem solving and practical cases. | |
| Supervised projects | cts Semi-autonomous work on larger practical cases, under the professors' guidance. | |
| Directed discussion | Guidance to solve individual / group assignments, problem solving and continuous evaluation activities. | |

| Personalized attention | | |
|------------------------|---|--|
| Methodologies | Description | |
| Laboratory practice | During laboratory practice, supervised projects, and directed discussions, students will be able to ask questions, doubts, etc. | |
| Supervised projects | The teacher, after listening to the students feedback, will go over difficult concepts, solve new problems, or use any | |
| Directed discussion | appropriate methodology to answer the questions. | |
| | | |

| Assessment | | | |
|---------------------|----------------|---|---------------|
| Methodologies | Competencies / | Description | Qualification |
| | Results | | |
| Laboratory practice | B1 B8 B10 | Grading the assignments submitted by students. | |
| Supervised projects | A1 A2 B1 B2 B8 | Grading the supervised projects submitted by students. | |
| Directed discussion | B6 C1 C4 | Continued, active, objectively measurable participation by the student. | 10 |

Assessment comments

First evaluation (May):

this course are open-source.

Practical exercises: 40% Guided projects: 50% Objective participation: 10% Second evaluation (July):

Practical exercises: same grade as in the first evaluation, as there are no new activities planned for this evaluation. 40% of the final grade. Guided projects: projects not evaluated in may or deemed incomplete will be presented in july after performing the changes suggested by the professor. 50% of the final grade. Objective participation: same grade as in the first evaluation, as there are no new activities planned for this evaluation. 10% of the final grade. Not graded: Students that do not present any practical exercise or guided project will not be graded.

| Recommendations |
|---|
| Subjects that it is recommended to have taken before |
| |
| Subjects that are recommended to be taken simultaneously |
| |
| Subjects that continue the syllabus |
| |
| Other comments |
| RecommendationsDue to the large practical component of the subject, it is advisable to be up-to-date with practices and guided projects during the |
| semester. Observations The course makes intensive use of online communication tools: Video calls, chats, etc. In-person classes will be |
| recorded for later perusing. An online learning management will be using for distributing notes, creating forums, etc. & nbsp; The software tools used in |
