

## Teaching Guide

Identifying Data					2018/19
Subject (*)	Network Administration	Code	614G01048		
Study programme	Grao en Enxeñaría Informática				
Descriptors					
Cycle	Period	Year	Type	Credits	
Graduate	2nd four-month period	Third	Obligatory	6	
Language	SpanishGalician				
Teaching method	Face-to-face				
Prerequisites					
Department	Computación				
Coordinador	Novoa De Manuel, Francisco Javier	E-mail	francisco.javier.novoa@udc.es		
Lecturers	Montoto Castela, Paula Novoa De Manuel, Francisco Javier	E-mail	paula.montoto@udc.es francisco.javier.novoa@udc.es		
Web	moodle.udc.es/course/view.php?id=29132				
General description	<p>This subject introduces the student to the problems associated with the design and operation of a computer network. It covers all aspects related to basic network services, monitoring, high availability and traffic control mechanisms.</p> <p>From a case of use, the different elements that make up a network will be shelled, as well as the problem of scalability and related security mechanisms.</p>				

## Study programme competences

Code	Study programme competences
A53	Capacidade para seleccionar, deseñar, despregar, integrar, avaliar, construír, xestionar, explotar e manter as tecnoloxías de hardware, software e redes dentro dos parámetros de custo e calidade adecuados.
A55	Capacidade para seleccionar, deseñar, despregar, integrar e xestionar redes e infraestruturas de comunicacións nunha organización.
B1	Capacidade de resolución de problemas
B3	Capacidade de análise e síntese
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C4	Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C8	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da sociedade.

## Learning outcomes

Learning outcomes	Study programme competences		
Know aspects related to the design, administration and management of computer equipment in the network, as well as their involvement in the implementation of systems and network services.	A53		
Ability to select, design, deploy, integrate and manage communications networks and infrastructures in an organization.	A55		
Ability to solve problems. Critically assess the knowledge, technology and information available to solve the problems they must face.		B1	C6
Capability for analysis and synthesis. The student will be able to analyze communication project requirements and propose solutions, performing works where they will synthesize the knowledge acquired during the course		B3	
Use the basic tools of information and communication technologies (ICT) necessary for the exercise of their profession and for learning throughout their lives. They will learn to use their own tools of network administration. know to do.			C3
Develop for the exercise of an open, cultured, critical, committed, democratic and supportive citizenship, capable of analyzing reality, diagnosing problems, formulating and implementing solutions based on knowledge and oriented to the common good.			C4

Critically assess the knowledge, technology and information available to solve the problems they must face.			C6
Assess the importance of research, innovation and technological development in the socio-economic and cultural progress of society			C8

Contents	
Topic	Sub-topic
1. Network Design	Separación física e lóxica de redes: vlans, subnetting e routing alta dispoñibilidade
2. Network Security	Sistemas de Firewalls Prevenición de intrusión Redes privadas virtuais: IPsec
3. Network Management	Syslog SNMP Netflow
4. New approaches to ICT	SDN NFV QoE IoT Cloud

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A53 A55 C4 C8	21	48	69
ICT practicals	A53 A55 B1 C3 C6	16	32	48
Objective test	A53 A55 B1	3	0	3
Supervised projects	B1 B3 C3 C6	7	21	28
Personalized attention		2	0	2

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	In which the theoretical content of the syllabus will be exposed, including illustrative examples and with the support of audiovisual media. The student will have the support material (notes, copies of the slides, articles, etc.) beforehand and the teacher will promote an active attitude, recommending the previous reading of the topics to be discussed each day in class, as well as asking questions that allow to clarify concrete aspects and leaving open questions for the reflection of the student. The magisterial ideas will be complemented with the realization of conferences in which an external expert will be brought to discuss some topic in greater depth.
ICT practicals	In which the student will see the operation in practice of some of the theoretical contents seen in the lectures. In these practices, the student will use different tools (network simulators, monitoring tools, etc.) proposed by the professor, which will allow them to deepen and consolidate their knowledge about different aspects of network management. The practices will be presented in a way that facilitates their semi-face-to-face realization to those students who can not attend the face-to-face sessions. In addition to the basic practices that all students will have to do, additional practices that interested students can do optionally will be proposed.
Objective test	At the end of the exposition of the subject, a test type will be carried out that will allow to assess the theoretical knowledge and practical skills acquired during the evolution of the course

Supervised projects	Proposal of works for their individual and non-face-to-face resolution by the students. These works will be optional and will allow students interested in doing them, to deepen into the content of the topics that are of special interest to them and that could not be dealt with in sufficient detail during the lectures.
---------------------	---

### Personalized attention

Methodologies	Description
ICT practicals Supervised projects	<p>The personalized attention during the practices will serve to guide and verify the work that the students are doing according to the indications that are provided to them, depending on the concrete practice in question.</p> <p>To carry out the supervised works, the teachers will provide the necessary initial indications, bibliography for consultation and will monitor the progress made by the student, in order to offer the relevant guidelines in each case, in order to ensure the quality of the works according to the criteria that are indicated.</p> <p>All the teachers of the subject will also propose a tutorial schedule in which the students will be able to answer any questions related to the development of the same. Students will be advised to attend tutorials as a fundamental part of learning support.</p> <p>It will facilitate the completion of practices and attention in the tutoring of work to students who, because they are enrolled part-time can not attend practical sessions or officially established tutoring sessions.</p>

### Assessment

Methodologies	Competencies	Description	Qualification
ICT practicals	A53 A55 B1 C3 C6	The practices of the subject will consist of different activities related to Network Management. A defense of the practices will be carried out to assess the level of understanding and the work developed by the student	45
Supervised projects	B1 B3 C3 C6	The tutored works will be optional and on a subject to be arranged between the student and the professor.	10
Objective test	A53 A55 B1	At the end of the exposition of the subject, an objective test type test will be carried out on the treated contents, both in the theoretical sessions and in the practical ones.	45

### Assessment comments

<p>To pass the subject, it will be necessary to obtain a minimum of 40% of the total mark in the objective test and in the practices. If not, the maximum grade that can be obtained is 4.5.</p> <p>STUDENTS ENROLLED TO PARTIAL TIME: They must contact the professors of the subject to make it possible to carry out the tasks outside the regular organization of the subject.</p>
