

## Teaching Guide

Identifying Data					2018/19
Subject (*)	Numerical Methods for Computing		Code	614G01064	
Study programme	Grao en Enxeñaría Informática				
Descriptors					
Cycle	Period	Year	Type	Credits	
Graduate	1st four-month period	Fourth	Optional	6	
Language	Spanish				
Teaching method	Face-to-face				
Prerequisites					
Department	Matemáticas				
Coordinador	Arregui Alvarez, Iñigo	E-mail	inigo.arregui@udc.es		
Lecturers	Arregui Alvarez, Iñigo	E-mail	inigo.arregui@udc.es		
Web					
General description					

## Study programme competences / results

Code	Study programme competences / results
A1	Capacidade para a resolución dos problemas matemáticos que se poden presentar na enxeñaría. Aptitude para aplicar os coñecementos sobre: álgebra linear; cálculo diferencial e integral; métodos numéricos; algorítmica numérica; estatística e optimización.
A33	Capacidade de analizar e avaliar arquitecturas de computadores, incluíndo plataformas paralelas e distribuídas, así como desenvolver e optimizar software para elas
A41	Capacidade para avaliar a complexidade computacional dun problema, coñecer estratexias algorítmicas que poidan conducir á súa resolución e recomendar, desenvolver e implementar aquela que garanta o mellor rendemento de acordo cos requisitos establecidos.
B3	Capacidade de análise e síntese

## Learning outcomes

Learning outcomes	Study programme competences / results		
Knowledge of the most representative models in science and engineering, specially in computing, formulated by mathematical models and that need numerical methods	A1		
Knowledge and comprehension of the numerical techniques better adapted for each one of the formulated models	A1 A33 A41	B3	
Implementation of software that develops the numerical techniques, or the use of software tools that develop them	A1 A41	B3	
Abord of problems that arise in the fields of computational science, covering from the understanding of the models to the practical and efficient implementation in computer	A1 A41	B3	

## Contents

Topic	Sub-topic
Matrix numerical methods and applications	<ul style="list-style-type: none"> <li>- Numerical resolution of large linear systems. Direct and iterative methods. Sparse matrices. Applications</li> <li>- Least-square problems. Applications</li> <li>- Power method for eigenvalues. Google page rank algorithm</li> </ul>

Numerical methods for computer graphics	<ul style="list-style-type: none"> <li>- Interpolation and piecewise interpolation</li> <li>- Spline interpolation</li> <li>- Introduction to B-splines and Bezier curves</li> <li>- Applications in computer graphics</li> </ul>
Numerical resolution of partial differential equations. Applications	<ul style="list-style-type: none"> <li>- Introduction to partial differential equations</li> <li>- Finite difference methods</li> <li>- Applications in image processing</li> </ul>
Numerical methods implementation	<ul style="list-style-type: none"> <li>- Some MatLab and Python commands</li> </ul>

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Laboratory practice	A1 A33 A41 B3	14	28	42
Problem solving	A1 A41 B3	7	14	21
Supervised projects	A1 B3	3	12	15
Mixed objective/subjective test	A1 B3	3	0	3
Guest lecture / keynote speech	A1 B3	21	42	63
Personalized attention		6	0	6

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Laboratory practice	Some applied problems will be posed, different techniques will be discussed and the chosen one will be implemented.
Problem solving	Applied problems will be posed and solved by the teacher in order to understand the different methods and techniques explained in the theoretical courses.
Supervised projects	The student will develop a subject, consulting bibliography and resolving a concrete problem.
Mixed objective/subjective test	The student will have to solve some theoretical questions and applied problems.
Guest lecture / keynote speech	In the session magistral the professor will expose the theoretical and practical contents. The contents will be issued from real problems, the concepts and methods will be developed and some applied examples and exercises will be presented.

Personalized attention	
Methodologies	Description
Supervised projects	- The teacher will supervise and discuss with the students their progress in their respective tasks.
Laboratory practice	- The teacher will expose the goals of the supervised project, and will discuss and overview the progress and the final results.
Problem solving	- The teacher will attend the students in all their doubts about the theoretical concepts and practical application.

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Supervised projects	A1 B3	Optionally, the student will develop a subject, with the aid of bibliographical references, and will solve a proposed problem.	20
Laboratory practice	A1 A33 A41 B3	The student will implement the adequate numerical methods in order to solve some proposed applied problems.	30

Mixed objective/subjective test	A1 B3	Theoretical-practical control about the contents of the subject.	50
---------------------------------	-------	--	----

### Assessment comments

To surpass the matter, the student will have to:

- do at least the 75% of the proposed laboratory practices
- obtain at least a qualification of 4 in the mixed objective/subjective proof.

In case of not to evaluate the works tutelados, the laboratory practices will have a weight of 50%.

In the case of classroom activities, facilities will be given to part-time students.

### Recommendations

#### Subjects that it is recommended to have taken before

Programming I/614G01001

Calculus/614G01003

Programming II/614G01006

Algebra/614G01010

#### Subjects that are recommended to be taken simultaneously

#### Subjects that continue the syllabus

#### Other comments
