General description	This course is focused in the main	n concepts of autonom	ous robotics	, emphasizing the au	utomatic design of control	
	strategies. The specific contents	range from the classica	l control app	proaches to the new	est based on computational	
	intelligence principles, like artificia	al neural networks, evo	lutionary alg	orithms and reinforce	ement learning.	

	Study programme competences / results
Code	Study programme competences / results
A35	Capacidade de analizar, avaliar e seleccionar as plataformas hárdware e sóftware máis acaídas para o soporte de aplicacións
	embarcadas e de tempo real.
A43	Capacidade para adquirir, obter, formalizar e representar o coñecemento humano nunha forma computable para a resolución de
	problemas mediante un sistema informático en calquera ámbito de aplicación, particularmente os relacionados con aspectos de
	computación, percepción e actuación en ambientes ou contornos intelixentes.
B1	Capacidade de resolución de problemas
В3	Capacidade de análise e síntese
В9	Capacidade para xerar novas ideas (creatividade)
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C8	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da
	sociedade.

Methodologies	Description		
Laboratory practice	Lab. sessions in which the teachers will explain the robotic platform and its development software in detail. Moreover, during		
	these sessions, the students must perform the design, implementation and validation of the supervised projects under the		
	supervision of a teacher.		
Supervised projects	Programming exercises that must be developed using the selected robotic platform. These exercises will be carried out in an		
	autonomous way and their progress will be supervised by the teachers		
Oral presentation	Theoretical work about a specific topic from the contents that will be orally presented and discussed with other students		

Methodologies

	Personalized attention
Methodologies	Description

Oral exposition by the teachers of the theory of the subject.

Guest lecture /

keynote speech

2/4

Laboratory practice Supervised projects Oral presentation

During the lab practices and tutorials, the student can consult the teacher all the doubts that appear about the realization of the formulated practical problems or about the use of the simulator or the real robot.

Supervised projects: It is recommendable the use of a personal assistance in these activities to resolve conceptual doubts or procedures than can appear during the resolution of the practical problems. Also, the personal assistance will be focused on in the explanation, by the student, of the proposed solution.

Oral presentation: the students' progress in their theoretical work must be supervised by the teachers, both in terms of contents and format.

		Assessment	
Methodologies	Methodologies Competencies / Description		Qualification
	Results		
Laboratory practice	A43 B1 B3 B9	The attendance to the laboratory classes will be considered in the final mark	5
Guest lecture /	A35 C8 C6	The attendance to the keynote speeches will be considered in the final mark	5
keynote speech			
Supervised projects	A35 B3 B9	Different programming projects will be proposed along the course that must be carried	50
		out in an autonomous way by the student and that will be presented and explained to	
		the teachers afterwards. It is mandatory to pass this methodology independently in	
		order to pass the whole subject.	
Oral presentation	B3 C8	The oral presentation, the participation in the discussion and the written inform will be	40
		considered in the final mark. It is mandatory to pass this methodology independently in	
		order to pass the whole subject.	

Assessment comments

Evaluation of this course is based on independently overcoming the two main methodologies: supervised projects and oral presentation. The first one focuses on the practical demonstration of the knowledge and skills acquired to solve problems in autonomous robotics, and the second one in the completion and presentation of a paper on a specific topic within theoretical agenda. Thus, if the student does not pass the subject in the ordinary call, he / she shall repeat all activities that were not passed in the extraordinary call. As an example, if a student passed the oral presentation but failed the supervised projects, he / she shall repeat these. Students with part-time enrollment can displace the 5% of the qualification of the attendance to the other activities, both in theory and in practice, in case they can not regularly attend classes. This change in the qualification methodology shall be applied to teachers of the subject at the beginning of the course.

Para axudar a conseguir unha contorna inmediata sustentable e cumprir co obxectivo da acción número 5: "Docencia e investigación saudable e sustentable ambiental e social" do "Plan de Acción Green Campus Ferrol" a entrega dos traballos documentais que se realicen nesta materia: 1. Solicitarase en formato virtual e/ou soporte informático 2. Realizarase a través de Moodle, en formato dixital sen necesidade de imprimilos 3. De se realizar en papel: - Non se empregarán plásticos. - Realizaranse impresións a dobre cara. - Empregarase papel reciclado. - Evitarase a impresión de borradores.
