

Teaching Guide						
Identifying Data				2018/19		
Subject (*)	Fundamentals of Electricity		Code	730G03012		
Study programme	Grao en Enxeñaría Mecánica					
Descriptors						
Cycle	Period	Year	Type	Credits		
Graduate	1st four-month period	Second	Obligatory	6		
Language	Spanish/Galician					
Teaching method	Face-to-face					
Prerequisites						
Department	Enxeñaría Industrial					
Coordinador	Menacho Garcia, Carlos Miguel	E-mail	miguel.menacho@udc.es			
Lecturers	Menacho Garcia, Carlos Miguel Santome Couto, Emilio	E-mail	miguel.menacho@udc.es emilio.santome@udc.es			
Web	moodle.udc.es					
General description	In this course, the analysis of electrical circuits and a brief introduction to the operation of electric machines is studied.					

Study programme competences	
Code	Study programme competences
A10	Coñecemento e utilización dos principios de teoría de circuitos e máquinas eléctricas.
B1	Que os estudantes demostren posuír e comprender coñecementos nunha área de estudo que parte da base da educación secundaria xeral e adoita encontrarse a un nivel que, áinda que se apoia en libros de texto avanzados, inclúe tamén algúns aspectos que implican coñecementos procedentes da vanguarda do seu campo de estudo
B2	Que os estudantes saibam aplicar os seus coñecementos ao seu traballo ou vocación dunha forma profesional e posúan as competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de problemas dentro da súa área de estudo
B3	Que os estudantes teñan a capacidade de reunir e interpretar datos relevantes (normalmente dentro da súa área de estudo) para emitiren xuízos que inclúan unha reflexión sobre temas relevantes de índole social, científica ou ética
B5	Que os estudantes desenvolvan aquellas habilidades de aprendizaxe necesarias para emprenderen estudos posteriores cun alto grao de autonomía
B7	Ser capaz de realizar unha análise crítica, avaliación e síntese de ideas novas e complexas
C1	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C4	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrentarse.
C5	Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.

Learning outcomes		
Learning outcomes		Study programme competences
Apply Ohm's law and Kirchhoff's laws. Use correct general methods of analysis of DC circuits. Analyze any direct current circuit using the most appropriate method.		A10    B1    C1 B2    C4 B3    C5 B5 B7
Interpret and differentiate between different types of ac power. Use correct general methods of analysis of alternating current circuits. Analyzing any AC circuit using the most appropriate method.		A10    B1    C1 B2    C4 B3    C5 B5 B7

To analyze the operation of the three-phase balanced and unbalanced circuits. Interpret, differentiate and measure various types of power present in three-phase circuits.	A10  B1 B2 B3 B5 B7	C1 C4 C5
Understanding the difference between the transitional regime and the steady or stationary state of a circuit. Learn to get the relevant initial conditions in an electrical circuit. Clearly identify the final steady state (elapsed long enough) expected of a circuit. Distinguish circuits first and second order. Get representative differential equation for each circuit transient.	A10  B1 B2 B3 B5 B7	C1 C4 C5
Know the basic principles of electromagnetic energy conversion system. Know the basics and general operating principles of electric machines.	A10  B1 B2 B3 B5 B7	C1 C4 C5

Contents	
Topic	Sub-topic
Analysis of DC circuits	Basics Circuit elements Association of elements Waveforms Mesh analysis Nodal analysis Circuit Theorems
Analysis of AC circuits	Basics Analysis of circuits in sinusoidal steady state Power and energy steady state sinusoidal Theorems steady state sinusoidal
Analysis three-phase circuits	Overview Balanced and unbalanced three-phase circuits Power in three-phase circuits Measurement of power in three-phase circuits
Circuit analysis transient	Basics First order circuits Second order circuits Laplace Transform
Introduction to the operation of electric machines	Magnetic circuits and energy conversion General principles of electrical machines

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Introductory activities	A10	1.5	0	1.5
Guest lecture / keynote speech	A10 B1 B2 B3 B5 B7 C1 C4 C5	24	38	62
Problem solving	A10 B1 B2 B3 B5 B7 C1 C4 C5	22	33	55
Laboratory practice	A10 B1 B2 B3 B5 B7 C1 C4 C5	9	5	14

Objective test	A10	2	12	14
Multiple-choice questions	A10	0.5	2	2.5
Personalized attention		1	0	1
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Introductory activities	Presentation of the subject, in large group (GG). Teachers: Miguel Menacho (theory and problems) and Emilio Santomé (Workshop Practice).
Guest lecture / keynote speech	Oral presentation complemented the use of media and the introduction of questions aimed at motivating students, in order to impart knowledge and facilitate learning.  Corresponds to the kind of theory, large group (GG). Professor Miguel Menacho.
Problem solving	Technique by to be solved a particular problem situation, from the knowledge and procedures that have been studied and worked.  Corresponds to the class of problems, medium (GM) group. Professor Miguel Menacho.
Laboratory practice	Methodology that allows students to apply the knowledge acquired through the completion of practical activities.  It is for the workshop exercises, small group (GP). Instructor: Emilio Santomé.
Objective test	Written test used for the assessment of learning.  In order to more rigorously assess the achievement of the objectives, the test consists of two parts: multiple choice questions (items) and problem solving.  Multiple choice questions (items) is a measuring instrument, whose distinctive feature is that it allows the answers qualify as correct or not; and to assess the knowledge acquired.  Troubleshooting: part that is intended to evaluate conceptual, procedural and attitudinal.  It is for the consideration of theory and problems. Instructor: Miguel Menacho
Multiple-choice questions	Objective test consisting raise a question as direct question or incomplete statement with several response options or alternatives that provide possible solutions, of which only one is valid.  Corresponds to practice exam workshop. Instructor: Emilio Santomé.

Personalized attention	
Methodologies	Description
Objective test	Tutorials review.  In the case of part-time students, they will have exam sessions before each continuous assessment exam. In addition, they will be given a collection of objective tests and problems to solve throughout the course.

Assessment				
Methodologies	Competencies	Description	Qualification	
Multiple-choice questions	A10	In the January announcement, the grade will be the sum of the amount of the assistance and assessment practices workshop note, which is valued between 0 and 5 points, and the note of a final exam (multiple choice test), which was also assessed from 0 to 5 points.  In the July, qualifying match corresponding note final exam (multiple choice test), which is valued between 0 and 10 points.	10	
Objective test	A10	This test involves problem solving and / or items, and will be computed between 0 and 10 points.	80	
Laboratory practice	A10 B1 B2 B3 B5 B7 C1 C4 C5	In the January announcement, the grade will be the sum of the amount of the assistance and assessment practices workshop note, which is valued between 0 and 5 points, and the note of a final exam (multiple choice test), which was also assessed from 0 to 5 points.  In the July, qualifying match corresponding note final exam (multiple choice test), which is valued between 0 and 10 points.	10	

Assessment comments
Para aprobar a asignatura é necesario aprobar a parte de teoría e problemas e a parte de prácticas de laboratorio. Aprobarase tamén a asignatura se acadando unha nota superior o igual a 3'5 puntos na nota de prácticas de laboratorio, compensara coa parte de teoría e problemas. A calificación final é a suma da (nota de teoría e problemas)*0'80 e a (nota de prácticas de laboratorio)*0'20 . Na presentación da asignatura (primeiro día de clase) poderanse indicar actividades adicionais cuia valoración sumarase á nota da prueba obxetiva da parte de teoría e problemas. En cualquera caso, a nota desta parte (teoría e problemas) no poderá ser superior a 10 puntos.
No caso de estudiantes a tempo parcial, realizarase unha avaliación periódica e continua, con probas obxetivas e problemas, tras impartir cada tema da materia.
Na segunda oportunidade, todos os temas entrarán no exame. A asistencia ás clases de teoría e de problemas non é obligatoria (exención do 100%), aínda que se lle ofrecerá total flexibilidade para asistir ao grupo que elixan; non obstante, a asistencia á clase práctica do taller é necesariamente obligatoria (exención do 0%), aínda que tamén se lle ofrecerá completa flexibilidade de asistencia.
