	Identifying Data			2019/20		
Subject (*)	Physics 2 Code		Code	610G01004		
Study programme	Grao en Química					
		Descriptors				
Cycle	Period	Year	Туре	Credits		
Graduate	2nd four-month period	First	Basic training	6		
Language	SpanishGalician		'	· · · ·		
Teaching method	Face-to-face					
Prerequisites						
Department	Física e Ciencias da Terra					
Coordinador	Rilo Siso, Esther	E-m	ail esther.rilo.siso@	esther.rilo.siso@udc.es		
Lecturers	Domínguez Pérez, Montserrat	E-m	ail montserrat.domi	montserrat.dominguez.perez@udc.es		
	Rilo Siso, Esther		esther.rilo.siso@	udc.es		
Web						
General description	Provides knowledge of General Physical	sics required for substan	tiation of the laws and pheno	mena of chemistry. This is a		
	subject that is the link between math	ematics and chemistry ir	n the sense of giving a forma	I formulation of scientific		
	observations that establish laws and	results without which yo	ou can not "close" the scientif	ic method. The laws of physics		
	provide the basic ingredients in which most sciences are supported, as well as instrumentation and measurement					
	techniques used in all scientific fields, and especially in chemistry. Hence its importance and presence in the first year of					
	the degree, since along with Physics 1 provides students with the necessary basis for understanding matters of other					
	modules and courses for the degree.					

	Study programme competences / results		
Code	Study programme competences / results		
A1	Ability to use chemistry terminology, nomenclature, conventions and units		
A3	Knowledge of characteristics of the different states of matter and theories used to describe them		
A12	Ability to relate macroscopic properties of matter to its microscopic structure		
A14	Ability to demonstrate knowledge and understanding of concepts, principles and theories in chemistry		
A15	Ability to recognise and analyse new problems and develop solution strategies		
A19	Ability to follow standard procedures and handle scientific equipment		
A20	Ability to interpret data resulting from laboratory observation and measurement		
A22	Ability to plan, design and develop projects and experiments		
A23	Critical standards of excellence in experimental technique and analysis		
A24	Ability to explain chemical processes and phenomena clearly and simply		
A25	Ability to recognise and analyse link between chemistry and other disciplines, and presence of chemical processes in everyday life		
A27	Ability to teach chemistry and related subjects at different academic levels		
B1	Learning to learn		
B2	Effective problem solving		
B3	Application of logical, critical, creative thinking		
B4	Working independently on own initiative		
B5	Teamwork and collaboration		
B7	Effective workplace communication		
C1	Ability to express oneself accurately in the official languages of Galicia (oral and in written)		
C3	Ability to use basic information and communications technology (ICT) tools for professional purposes and learning throughout life		
C6	Ability to assess critically the knowledge, technology and information available for problem solving		

Learning outcomes

Learning outcomes			amme
			es/
		results	
Have the minimum theoretical foundations that allow the understanding of the aspects of chemistry related to the electrical and	A1		C1
magnetic phenomena and vibratory motion and wave motion.	A3		
	A12		
	A14		
	A25		
Know how to reduce real problems to their most essential aspects and apply them to the field of chemistry	A14	B1	C1
	A15	B2	C3
	A27	B3	C6
		B4	
		B5	
		B7	
Apply the basic laboratory techniques, including the necessary calculations and expressing the results appropriately. Use the	A19	B1	C3
material and apply the basic safety standards to work in a laboratory.	A20	B2	C6
	A22	В3	
	A23	B5	
	A24	B7	

	Contents	
Торіс	Sub-topic	
1. Introduction to the study of the physic fields	1.1. Fields theory	
	1.2. Gravitational field	
2. Electricity	2.1. Electric field and potential.Capacity	
	2.2. Electric current and direct current circuits	
3. Magnetism	3.1. Magnetic field	
	3.2. Magnetic induction	
	3.3. Alternating current circuits	
4. Oscillations and waves	4.1. Oscillations	
	4.2. Waves motion	
	4.3. Electromagnetic waves	
Practical teaching: resistance measurement using a		
Wheatstone bridge, measurements of voltage, resistance and		
current in electrical circuits, light diffraction in a thread, simple		
pendulum, spring constant.

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies		
Methodologies	Description		
Guest lecture /	During these sessions, teacher will explain lessons including different formats (theory, problems and general examples),		
keynote speech	emphasizing the more important aspects and in the more difficult ones.		
Problem solving	In this sessions, some problems related to theory contents explained before will be proposed and solved. Students must solve		
	this problems and questions under teacher supervision, individually or in groups. There will be included in these classes		
	activities that imply the participation of the pupils, that will contribute to the continuous assessment. So teacher can observe		
	the difficulties of comprehension that every pupil presents in the resolution of problems.		
Laboratory practice	Students will perform laboratory practice for the application of knowledge acquired in the keynote sessions and problem		
	solving. With this methodology, they acquire skills needed to work properly in a physics lab, which includes the use of		
	instruments for measurement, data processing and analysis of results of physic properties and magnitudes. A guide for each		
	practice will be given to the student, and they will have all necessary material to mount and do them.		
Mixed	It is the test for the evaluation of knowledge, which allows teacher assessing the level of student learning.		
objective/subjective			
test			

	Personalized attention		
Methodologies	Description		
Laboratory practice	Students will be attended individually to help them to understand and resolve all problems related with the subject they can		
Problem solving	Problem solving have. Moreover, teacher regularly invite students to tutorials with the intention of receiving the necessary guidance.		

		Assessment	
Methodologies	Competencies /	Competencies / Description	
	Results		
Laboratory practice	A19 A20 A22 A23	Attendance to Laboratory practices is MANDATORY, so you cannot pass the course	15
	A24 B1 B2 B3 B5 C3	without making them. The highest mark that can be obtained is 1.5 points, and the	
	C6	minimum one required to pass them is 0.7. It will be evaluated on the basis of	
		participation and results delivery of each session, and a test that will take place during	
		the last session. Competences evaluated A19, A20, A22, A23, A24, B1, B3, B5, B7,	
		C3	
Problem solving	A14 A15 A27 B1 B2	Participation on the resolution of problems and exercises will be evaluated. Teacher	15
	B3 B4 B5 B7 C1 C3	may periodically collect exercises or questions proposed during these sessions.	
	C6	Competences evaluated: A1, A3, A12, A15, B1, B2, C1	
Mixed	A1 A3 A12 A14 A15	Examination accounts for 70% of the final grade	70
objective/subjective	A24 A25 B2 B3 C6	During the term a mid-course assesment exam will be done. Competences evaluated:	
test		A1, A3, A12, A14, A15, B2, C1.	

Assessment comments

## Exam mark should not

be less than 5 (up to 10). The final mark must

be 5 or higher to pass course, and will be calculated as follows: exam mark\*0.7+laboratory+problem

solving. If a student, having a final mark higher than 5, fails

the minimum mark in any activity, he/she will have a mark of 4.5, i.e., Fail.

The evaluation of students in the second opportunity will follow the same criteria as at the first opportunity. The students tested in the second

opportunity may only be eligible for honors if the maximum number of these for the corresponding course was not covered at the first opportunity. In

the July opportunity will be saved the qualifications of Laboratory and Seminars of problems.

Students which due to justified reasons or for being enrolled part-time do

not participate in the ongoing evaluation activities volunteers, may do

equivalent work , consisting of delivery and explanation during sessions of individualized

tutoring bulletins problems and activities proposed in small group sessions.

The labs will be held according to the schedule published at the beginning

of the semester. The completion is mandatory, so it is necessary to overcome to

pass the course.

For the rating of No Presented students they must not have participated in

activities totaling more than 25% of the final grade .

Recommendations
Subjects that it is recommended to have taken before
Mathematics 1/610G01001
Physics 1/610G01003
Subjects that are recommended to be taken simultaneously
Mathematics 2/610G01002
Subjects that continue the syllabus
Other comments
You need to have knowledge of physics and mathematics from high school.
