

Teaching Guide						
Identifying Data				2019/20		
Subject (*)	Statistics		Code	610G02005		
Study programme	Grao en Bioloxía					
Descriptors						
Cycle	Period	Year	Type	Credits		
Graduate	2nd four-month period	First	Basic training	6		
Language	Spanish					
Teaching method	Face-to-face					
Prerequisites						
Department	Matemáticas					
Coordinador	Jacome Pumar, Maria Amalia	E-mail	maria.amalia.jacome@udc.es			
Lecturers	Estevez Perez, Maria Graciela González Rueda, Ángel Manuel Jacome Pumar, Maria Amalia López Cheda, Ana Meilán Vila, Andrea Novo Díaz, Silvia Novoa Flores, Guido Ignacio	E-mail	graciela.estevez.perez@udc.es angel.manuel.rueda@udc.es maria.amalia.jacome@udc.es ana.lopez.cheda@udc.es andrea.meilan@udc.es s.novo@udc.es guido.novoa@udc.es			
Web						
General description	This subject provides a first contact with the statistical techniques: statistical modelling, statistical tools to analyze data, and methods for the critical diagnosis and interpretation of the results in terms of the considered problem.					

Study programme competences	
Code	Study programme competences
A21	Deseñar modelos de procesos biolóxicos.
A26	Deseñar experimentos, obter información e interpretar os resultados.
A30	Manexar adecuadamente instrumentación científica.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B6	Organizar e planificar o traballo.
B10	Exercer a crítica científica.

Learning outcomes		Study programme competences		
Learning outcomes				
To design experiments, to get information and to explain the results			A21	B2
			A26	B3
			A30	B10
To apply an inquisitive, logical and creative reasoning to solving problems effectively.			B2	
			B3	
			B6	

Contents		
Topic	Sub-topic	
Probability Theory	Basic concepts on probability theory Random variables Basic probability distributions in Biology	
Descriptive Statistics	Describing univariate data Describing bivariate data	

Statistical Inference	Introduction Point estimation Interval estimation Parametric hypothesis testing of one and several samples Nonparametric hypothesis testing of one and several samples
-----------------------	--

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Short answer questions	A21 B2 B3 B6	2	0	2
ICT practicals	A26 A30 B2 B3 B6 B10	13	26	39
Problem solving	A21 B2 B3 B6 B10	8	19.2	27.2
Guest lecture / keynote speech	A21 A26 B2 B3 B10	24	52.8	76.8
Objective test	A26 A30 B2 B3 B10	3	0	3
Personalized attention		2	0	2

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Short answer questions	Short answer and/or test questions with the aim of controlling the progress in the PROBABILITY contents block.
ICT practicals	Practicals in the computer lab to introduce a statistical software helpful to solve problems.
Problem solving	Seminars in small groups for the explanation and discussion of problems from the different contents blocks.
Guest lecture / keynote speech	Face to face keynote speeches, where the lecturer will show the fundamental parts of the theoretical program, suitably illustrated with practical examples.
Objective test	Final exam, with short answer questions and/or reasoned solution of practical problems, of the DESCRIPTIVE STATISTICS and STATISTICAL INFERENCE theoretical and practical content blocks.

Personalized attention	
Methodologies	Description
ICT practicals	<p>Optionally, some academic work consisting on the solution of a practical problem using the statistical software introduced in the ICT practicals, could be carried out.</p> <p>There will be personalized advice sessions during the development of the practical works. These sessions will take place by means of the interaction teacher/students at the moment of solving the different activities suggested in class: solving doubts, correcting mistakes, suggesting proper approaches to deal with the proposed problems and reviewing initial versions of the works. In addition, students will have the opportunity of receiving personalized advice in the office of the teachers.</p> <p>Personalized advice may be also received via online, by means of e-mail, virtual platform,....</p> <p>Part-time students may also perform these works and submit them to the teachers for their assessment. Part-time students can also receive personalized assistance using both face-to-face and virtual approaches.</p>

Assessment			
Methodologies	Competencies	Description	Qualification
Short answer questions	A21 B2 B3 B6	Achievement test to assess the knowledge in the PROBABILITY THEORY block.	40

Objective test	A26 A30 B2 B3 B10	Achievement test to assess the knowledge in the DESCRIPTIVE STATISTICS and STATISTICAL INFERENCE blocks.	60
----------------	-------------------	--	----

Assessment comments

The subject is split in two blocks: 1- Probability Theory and 2-Descriptive Statistics-Statistical Inference. Each block will be assessed independently, so that passing one block will not affect the grade of the other. To pass the whole subject, it will be strictly necessary to pass each block separately. Otherwise, the final score will be 4.5 at most.

During the course, two exemption exams might be performed, each for any of the two blocks, so that the student who passes any of the exemption exams, will have the corresponding block passed regarding the may/july final exams.

The PROBABILITY THEORY block represents 40% of the qualification, and the DESCRIPTIVE STATISTICS and STATISTICAL INFERENCE block the remaining 60%.

To get the grade/mark NP (No grade reported, absent) in may, the student should not have attended any exemption exams nor the official test. To get the grade/mark NP in july, the student should not attend the final exam.

The attendance and participation to the seminars, practicals, personalized attention, etc. is not compulsory but it could be additionally with a maximum of one point over and above the final mark.

All previous observations are applicable to part-time students and/or with academic exemption.

Recommendations

Subjects that it is recommended to have taken before

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Data Analysis in Biology/610G02044

Other comments

Highly recommended:1- Attendance and participation in the keynote sessions, practicals and seminars.2- To solve every explained exercise, both with and without the statistical software.3- To supplement the course material with the sources of information.4- To study the course material and to solve the proposed problems frequently.5- Active involvement in the practicals and seminars.6- To become familiar with the statistical software by using it constantly and regularly.

7- To try to use the statistical techniques in other different subjects.8- Attendance to and taking advantage of the personalized attention sessions.
