Subject (*)	Advanced Parallel Programming			Code	614973107	
Study programme	Mestrado Universitario en Comp	utación de Altas	Prestacións / High	Performance Compu	ting (Mod. Virtual)	
		Descri	iptors			
Cycle	Period	Yea	ar	Туре	Credits	
Official Master's Degre	e 2nd four-month period	Firs	st	Optional	6	
Language	SpanishGalicianEnglish		'		'	
Teaching method	Face-to-face					
Prerequisites						
Department	Departamento profesorado mást	erEnxeñaría de	Computadores			
Coordinador	Fraguela Rodriguez, Basilio Berr	nardo	E-mail	basilio.fraguela@	@udc.es	
Lecturers	Cabaleiro Domínguez, José Carl	los	E-mail			
	Darriba López, Diego			diego.darriba@u	udc.es	
	Fraguela Rodriguez, Basilio Bernardo		basilio.fraguela@udc.es			
Web	aula.cesga.es			·		
General description	This subject will increase the known	owledge on para	llel programming a	cquired by the student	ts in the previous quarter in	
	subjects such as "Parallel Progra	amming" and "Pr	rogramming of hete	erogeneous architectu	res". The aim will be that the	
	students learn to optimize parallel codes for big parallel architectures or current supercomputers, using for their tests the					
	resources provided by the Centro de Supercomputación de Galicia (CESGA) and the Group of Architecture of Computers					
	(GAC) of the Universidade da Coruña (UDC).					
	We will focus on those aspects of the parallel applications that usually penalize performance, such as the communications,					
	load unbalance, memory access patterns or the management of I/O. We will also tackle multiplatform computing, which					
	allows to take advantage of the t	ask level paralle	lism by using seve	ral hardware accelera	tors, as well as hybrid computing,	
	where the same application uses	s several parallel	programming para	adigms in order to obta	ain good performance in clusters	
	with multi-core computers and/or	hardware accel	lerators.			

	Study programme competences / results
Code	Study programme competences / results
A1	CE1 - Define, evaluate and select the most appropriate architecture and software to solve a problem
A2	CE2 - Analyze and improve the performance of a given architecture or software
A4	CE4 - Deepen in the knowledge of different programming tools and programming languages in the field of the high performance
	computing
A5	CE5 - Analyze, design and implement efficient parallel algorithms and applications
A7	CE7 - Know the emerging technologies in the supercomputing field
B1	CB6 - Possess and understand the knowledge that give a baseline or opportunity to be original in the development and/or application of
	ideas, often in a research environment
B2	CB7 - The students have to know how to apply the acquired knowledge and their capacity to solve problems in new or hardly explored
	environment inside wider contexts (or multidiscipinary) related to its area of development
B5	CB10 - The students have to possess learning skills that allows them to continue to study in a mainly self-driven or autonomous manne
В6	CG1 - Be able to search and select useful information to solve complex problems, using the bibliographic sources of the field
В9	CG4 - Be able to plan and do research, development and innovation tasks in high performance computing related environments
C1	CT1 - Use the basic technologies of the information and computing technology field required for the professional development and the
	long-life learning

	Methodologies
Methodologies	Description
Laboratory practice	In this activity autonomous tasks guided by instructions from the teacher are carried out which allow the student to become familiar from a practical point of view with the contents exposed in the reading materials on the contents of the subject.
Supervised projects	They consist in the development of projects in which the student has to use the acquired knowledge to solve different problems in an autonomous way.
Mixed objective/subjective test	An evaluation test of the subject is conducted in this activity.
Workbook	Reading and viewing material related to the content of each topic. The student will have all the necessary material according to the calendar of the subject. The teacher will promote an active attitude, encouraging the student to ask questions that clarify specific aspects. The material will leave open questions for the reflection of the student.

	Personalized attention			
Methodologies	Description			
Supervised projects	Both in the practices carried out autonomously as well as during the development of the supervised projects, the students will			
Laboratory practice	be able to present questions, doubts, etc. The teacher, in response to these requests, will review concepts, solve new problems or use any activity that considers appropriate to resolve the issues raised.			

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		
Supervised projects	A1 A2 A4 A5 A7 B1	Quality of the work developed and progress of the student during its completion	70
	B2 B5 B6 B9 C1		
Mixed	A2 A5 B2	Correction and quality of the solutions proposed by the students to the questions	30
objective/subjective		raised in the test	
test			

## **Assessment comments**

In the activities of distance evaluation students may be required to apply mechanisms that guarantee their identity as well as the authorship of the evaluable elements presented.

All the evaluation activities included in this guide conform the process of continuous evaluation of the subject. Neither the classes nor most of the evaluation activities require the student's presence, with the exception of the mixed test, of a maximum of 2 hours. This, together with the fact that all the materials of the subject are available in the education web platform of the degree, favors the work and the evaluation of the students enrolled part-time and with academic allowance of teaching exemption.
