General description	ARCHITECTURAL ANALYSIS 2.				
	The aim of this subject is to develop students' abilities to analyze architecture as an object through analogue and digital				
	tools for the production of graphic documents or models.				

	01
0 - 1-	Study programme competences
Code	Study programme competences
A1	"Ability to apply graphical procedures to the representation of spaces and objects (T) "
A2	Ability to conceive and represent the visual attributes of objects and master proportion and drawing techniques, including digital ones (T)
A3	Knowledge of spatial representation systems and projections adapted and applied to architecture
A4	Knowledge of the analysis and the theory of form and the laws of visual perception adapted and applied to architecture and urbanism
A40	Ability to practise architectural criticism
A48	Adequate knowledge of general theories of form, composition and architectural types
A63	Development, presentation and public review before a university jury of an original academic work individually elaborated and linked to an
	of the subjects previously studied
A64	Coñecemento avanzado de aspectos específicos da materia de Expresión Gráfica Arquitectónica no contemplados expresamente na
	Orde EDU/2075/2010
B1	Students have demonstrated knowledge and understanding in a field of study that is based on the general secondary education, and is
	usually at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of
	their field of study
B2	Students can apply their knowledge to their work or vocation in a professional way and have competences that can be displayed by mean
	of elaborating and sustaining arguments and solving problems in their field of study
B3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include
	reflection on relevant social, scientific or ethical issues
B4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist public
B5	Students have developed those learning skills necessary to undertake further studies with a high level of autonomy
B6	Knowing the history and theories of architecture and the arts, technologies and human sciences related to architecture
B7	Knowing the role of the fine arts as a factor that influences the quality of architectural design
B12	Understanding the relationship between people and buildings and between these and their environment, and the need to relate buildings
	and the spaces between them according to the needs and human scale
C1	Adequate oral and written expression in the official languages.

C2	Mastering oral and written expression in a foreign language.
C3	Using ICT in working contexts and lifelong learning.
C4	Exercising an open, educated, critical, committed, democratic and caring citizenship, being able to analyse facts, diagnose problems,
	formulate and implement solutions based on knowledge and solutions for the common good
C5	Understanding the importance of entrepreneurial culture and the useful means for enterprising people.
C6	Critically evaluate the knowledge, technology and information available to solve the problems they must face
C7	Assuming as professionals and citizens the importance of learning throughout life
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Learning outcomes			
Learning outcomes	Study programme		amme
	COI	mpeten	ces
Adquirir coñecementos técnicos para a análise da arquitectura por medio de ferramentas gráficas e maquetas.	A1	B1	C1
	A2	B2	C2

	Contents		
Торіс	Sub-topic		
A. ARCHITECTURAL ANALYSIS	Graphic Analysis of Architecture		
A.1. PRESENTATION OF THE MATTER	Detailed explanation of the Teaching Guide.		
	Agenda, organization, objectives and methodology.		
	Working material and bibliography.		
	Spaces of matter: the classrooms.		
	Matter times: calendar.		
	The evaluation system.		
	The importance of the subject in the Curriculum and in Architecture.		
A.2. INTRODUCTION TO THE COURSE	Explanation of the course's argument: work dynamics, objectives. Presentation of the		
	case studies.		
A.3. GRAPHIC ANALYSIS OF ARCHITECTURE:	Architectural analysis procedures.		
MATERIALITY	Graphic methods for architectural analysis.		
A.4. TOPOLOGICAL ANALYSIS	Relationship between architecture and its surroundings.		
	Relationship between interior and exterior spaces		
	Graphic methods for topological analysis.		
A. 5. FUNCTIONAL ANALYSIS	The functional content of the architectural fact.		
	The functional structure as the basis of architecture.		
	Typology. Type and Model.		
	Graphic methods for functional analysis.		
A.6. CONSTRUCTIVE ANALYSIS	The constructive systems in the materialization and the construction of the meaning of		
	the architecture.		
	Graphic methods for constructive analysis.		
A.7. STRUCTURAL ANALYSIS	Structural systems in the materialization and construction of the meaning of		
	architecture. The skin in the tectonic conformation of architecture.		
	Graphic methods for the technological analysis.		

A.8. FORMAL ANALYSIS	The generative process of the form as a relationship between mass, space and
	surface.
	Graphic methods for formal analysis.
A.9. GEOMETRIC ANALYSIS	The geometric analysis The concept of module.
	Graphic methods for formal analysis.
A.10. THE PARTI	Analytical synthesis procedures.
	Graphic methods for the realization of the "parti" and the communication of
	the architectural analysis.
B. TRAINING IN DIGITAL GRAPHIC TOOLS	Digital graphic tools in the representation and analysis of architecture.
B.1 Digital tools for the representation of architecture	The implementation of the information society.
	The digital versus the analog and its effect on the professional work of architecture.
	The digital work environment: information management and concurrent work.
B.2. Digital tools I	Tools for architectural ideation.
	The sensible drawing programs
B.3. Digital tools II	Tools for architectural analysis.
	The programs of illustration, edition and layout.
	The programs of spatial modeling.
B.4. Digital tools III	Tools for architectural communication.
	The programs of delineation, rendering and augmented reality.
B.5. Digital tools IV	Tools for the execution of the architecture.
	The building modeling programs.

	Methodologies		
Methodologies	Description		
Guest lecture /	Introduction of fundamental theoretical concepts, graphical methodologies and presentation of case studies.		
keynote speech			
Workshop	Confluence space with the materials Proxectos 3 and Urbanística 1		
Supervised projects	The students will apply the concepts and methodologies to the proposed cases of study, supervised by the teaching staff. This		
	includes the oral presentation of the work developed, the response to tests of control of the training process and the		
	production of a document with the resulting materials.		
ICT practicals	The students will develop specific practices in which they will apply the knowledge acquired about digital graphic tools.		
Objective test	Students must pass, with a minimum grade of 5, the test or specific tests that are proposed to justify knowledge of the subject.		
	Without passing them, the course can not be approved.		

	Personalized attention
Methodologies	Description
Guest lecture /	The evaluation is a continuous process in which the activity that the student develops is controlled and registered. Periodically
keynote speech	and -in any case, whenever the student so requires- he is informed of the adequacy of the level reached by his activities in
Workshop	relation to the programmatic objectives of the subject.
Supervised projects	A period is established, at the end of the course, free of theoretical sessions and workshops, in which the attention is
ICT practicals	developed exclusively on an individual basis, so that each student is oriented in order to reach the final objectives of the
Objective test	subject or, in your case, excellence.
	At all times during the course, the teachers provide the students with additional support to the teacher individually, at a known
	time.

		Assessment	
Methodologies	Competencies	Description	Qualification
Guest lecture /	A40 A48 A64 B6 B7	The contents of the theoretical sessions are fundamental to know the analysis	5
keynote speech	C5 C8	techniques and objectives that will be used in the development of the work.	
Workshop	A1 A2 A3 A4 A40 A64	The Workshop is the field of synthesis of the subject. Here, the intellectual	15
	B1 B2 B3 B4 B5 B6	development of the student and the knowledge of the objectives of the course, the	
	B7 B12 C1 C2 C3 C4	mastery of the subject matter and the communicative resources of the architect are	
	C7	evidenced simultaneously.	
Supervised projects	A1 A2 A3 A4 A40 A63	The objective of the subject is to train the student in the analysis of the architecture	45
	B1 B5 B12	and in the management of information sources applied to real assumptions.	
		All this is structured in a Tutored Work, which must be carried out throughout the	
		teaching period in accordance with a scientific methodology, matching the theoretical	
		knowledge imparted by the teaching staff. A final document will be produced where all	
		its contents are expressed with advanced communicative strategies, typical of	
		architecture professionals.	
ICT practicals	A1 A2 A3 A4 B4 B5	Practices that demonstrate skills in the use of digital tools exposed during classes will	15
	C3 C6	be developed.	
Objective test	A63	Specific control tests will be proposed to justify the knowledge acquired during the	20
		course.	

Assessment comments

1. Assistance. The students must attend the lectures and present the graphic works, models, etc. proposed, with the quality level required to overcome the subject. Attendance is compulsory at least 80% to the theoretical and practical classes, as well as to the shared workshops. Without this requirement, no student will be able to pass by course to subject. The delivery of less than 100% of the practices, in its term, will mean that the course was not followed and a note of "Not Submitted" at the first opportunity. To be able to attend the second opportunity, the students must have delivered 100% of the course practices duly supervised, they may also have to perform additional work.2. Late registration. Students enrolled after the start of the academic year, must attend the theoretical and practical classes from the date of enrollment, with the possibility of recovery of the practices carried out until that date.3. Opportunities. To overcome the subject, the student will have two opportunities: June and July. Anyone who does not pass the first opportunity may present himself to the second. In both cases it is practical graphic evidence.4. Mobility. Teaching to students from mobility programs, will refer to specific pedagogical, linguistic and calendar conditions and the performance of special tutored works.
