

## Teaching Guide

Identifying Data					2019/20
Subject (*)	Fundamentals of Electricity	Code	730G03012		
Study programme	Grao en Enxeñaría Mecánica				
Descriptors					
Cycle	Period	Year	Type	Credits	
Graduate	1st four-month period	Second	Obligatory	6	
Language	SpanishGalician				
Teaching method	Face-to-face				
Prerequisites					
Department	Enxeñaría Industrial				
Coordinador	Menacho Garcia, Carlos Miguel	E-mail	miguel.menacho@udc.es		
Lecturers	Menacho Garcia, Carlos Miguel Santome Couto, Emilio	E-mail	miguel.menacho@udc.es emilio.santome@udc.es		
Web	moodle.udc.es				
General description	In this course, the analysis of electrical circuits and a brief introduction to the operation of electric machines is studied.				

## Study programme competences / results

Code	Study programme competences / results
A10	CR4 - Coñecemento e utilización dos principios de teoría de circuitos e máquinas eléctricas.
B2	CB02 - Que os estudantes saiban aplicar os seus coñecementos ao seu traballo ou vocación dunha forma profesional e posúan as competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de problemas dentro da súa área de estudo
B3	CB03 - Que os estudantes teñan a capacidade de reunir e interpretar datos relevantes (normalmente dentro da súa área de estudo) para emitiren xuízos que inclúan unha reflexión sobre temas relevantes de índole social, científica ou ética
B5	CB05 - Que os estudantes desenvolvan aquelas habilidades de aprendizaxe necesarias para emprenderen estudos posteriores cun alto grao de autonomía
B7	B5 - Ser capaz de realizar unha análise crítica, avaliación e síntese de ideas novas e complexas
C1	C3 - Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C5	C7 - Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.

## Learning outcomes

Learning outcomes	Study programme competences / results		
Apply Ohm's law and Kirchhoff's laws.	A10	B2	C1
Use correct general methods of analysis of DC circuits.		B3	C5
Analyze any direct current circuit using the most appropriate method.		B5	
Obtain and solve the representative differential equation of an CC circuit in a transitory regime.		B7	

## Contents

Topic	Sub-topic

Analysis of DC circuits	Basics Circuit elements Association of elements Waveforms Mesh analysis Nodal analysis Circuit Theorems Transitory regime
Analysis of AC circuits	Basics Analysis of circuits in sinusoidal steady state Power and energy steady state sinusoidal Theorems steady state sinusoidal Transitory regime
Analysis three-phase circuits	Overview Balanced and unbalanced three-phase circuits Power in three-phase circuits Measurement of power in three-phase circuits
Introduction to the operation of electric machines	Magnetic circuits and energy conversion General principles of electrical machines

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Introductory activities	A10	1.5	0	1.5
Guest lecture / keynote speech	A10 B2 B3 B5 B7 C1 C5	24	39	63
Problem solving	A10 B2 B3 B5 B7 C1 C5	22	30	52
Laboratory practice	A10 B2 B3 B5 B7 C1 C5	9	13.5	22.5
Mixed objective/subjective test	A10	2.5	7.5	10
Personalized attention		1	0	1

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Introductory activities	Presentation of the subject, in large group (GG). Teachers: Miguel Menacho (theory and problems) and Emilio Santomé (Workshop Practice).
Guest lecture / keynote speech	Oral presentation complemented the use of media and the introduction of questions aimed at motivating students, in order to impart knowledge and facilitate learning.  Corresponds to the kind of theory, large group (GG). Professor Miguel Menacho.
Problem solving	Technique by to be solved a particular problem situation, from the knowledge and procedures that have been studied and worked.  Corresponds to the class of problems, medium (GM) group. Professor Miguel Menacho.

Laboratory practice	Methodology that allows students to apply the knowledge acquired through the completion of practical activities.  It is for the workshop exercises, small group (GP). Instructor: Emilio Santomé.
Mixed objective/subjective test	This test consists of the resolution of problems and / or elements, and will be valued among 10 points.  Instructors: Miguel Menacho and Emilio Santomé.

### Personalized attention

Methodologies	Description
Mixed objective/subjective test	Tutorials review.  In the case of part-time students, they will have exam sessions before each continuous assessment exam. In addition, they will be given a collection of objective tests and problems to solve throughout the course.

### Assessment

Methodologies	Competencies / Results	Description	Qualification
Mixed objective/subjective test	A10	This test consists of the resolution of problems and / or elements, and will be valued among 10 points.  In laboratory practices:  In the January exam, the grade will be the sum of the grade corresponding to the attendance and evaluation of the workshop practices, which will be assessed between 0 and 5 points, and the final exam grade (mixed test), which will also be assessed between 0 and 5 points. .  In the July session, the grade will coincide with the corresponding final exam (mixed test), which will be assessed between 0 and 10 points.	70
Laboratory practice	A10 B2 B3 B5 B7 C1 C5	In the January announcement, the grade will be the sum of the amount of the assistance and assessment practices workshop note, which is valued between 0 and 5 points, and the note of a final exam (multiple choice test), which was also assessed from 0 to 5 points.  In the July, qualifying match corresponding note final exam (multiple choice test), which is valued between 0 and 10 points.	30

### Assessment comments

To pass the subject it is necessary to approve the theory and problems part and the laboratory practices part. The subject will also be approved if reaching a grade superior or equal to 3'5 points in the note of laboratory practices, will compensate with the part of theory and problems. The final grade is the sum of the (note of theory and problems) \* 0'80 and of the (note of laboratory practices) \* 0'20. In the presentation of the subject (first day of class) may indicate additional activities whose assessment will be added to the note of the objective test of the theory and problems. In any case, the note of this part can not be higher than 10 points.

In the case of part-time students, there will be a periodic and continuous evaluation, with objective tests and problems, after imparting each topic of the subject. On the second opportunity, all subjects will enter the exam. Attendance at theory and problem classes is not mandatory (100% waiver), although you will be offered full flexibility to assist the group of your choice; however, attendance at the workshop practice class is necessarily mandatory (0% waiver), although you will also be offered full assistance flexibility
