General description	Knowledge management in biolog	gy is the field of bioinforma	itics, and ir	ncludes both the form	nalization of the information	
	obtained and its organization in a	ppropriate databases, the	extraction	of relationships betw	veen the scattered information,	
	the modeling of biological process	ses and the generation of	nypotheses	s to support new exp	perimental approaches. From a	
	technical standpoint, bioinformatics using computational methods (the proper method development in this area is often					
	called computational biology) and receives contributions from mathematics, physics and computer engineering. However,					
	from the point of view of the objectives, bioinformatics is a branch of biology, as they can be biochemistry or microbiology.					
	from the point of view of the object	ctives, bioinformatics is a b	ranch of b	iology, as they can b	e biochemistry or microbiology	
	from the point of view of the object This interdisciplinary nature of bio

	Study programme competences
Code	Study programme competences

A3	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A9	Skills of understanding the structure and dynamics of proteins to individual and proteomic level, as well as the techniques that are necessary to analyze them and to study their interactions with other biomolecules.
A11	Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B2	Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of
	biological problems and the looking for solutions.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions
	and to prepare reasoned reports on scientific and biotechnological questions
B9	Skills of preparation, show and defense of a work.
C3	Using ICT in working contexts and lifelong learning.
C6	Acquiring skills for healthy lifestyles, and healthy habits and routines.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.
C9	Ability to manage times and resources: developing plans, prioritizing activities, identifying critical points, establishing goals and
	accomplishing them.

Learning outcomes			
Learning outcomes	Study	y progra	amme
	CO	mpeten	ces
Know access to Channels Bioinformatics Web Resources	AR3	BR3	CC3
		BR9	
Understand and manage properly the area of Bioinformatics	AR3	BR3	CC3
		BR9	CC6
Being able to function independently to find information about the different programs and their changeable parameters and	AR3	BR2	CC3
understand the impact on the results of the analysis		BR3	CC9
		BR9	
To have bioinformatics knowledge of how to make a prediction of the onedimensional characteristics of a protein	AR3	BR1	CC3
	AR9	BR2	CC6
	AR11	BR3	CC8
To be able to perform a simple prediction of the three dimensional structure of a protein based on available data and programs	AR3	BR1	CC3
on the Web		BR2	CC6
		BR3	CC8
			CC9
Learn the basic methods of molecular simulation and how they are used for the study of proteins	AR3	BR1	CC3

		BR3	CC8

Contents		
Topic Sub-topic		
Bioinformatics	Web Resources and Databases in molecular biology. Analysis and comparison of	
	sequences.	
	Sequence alignment. Location of motives. Search of genes. annotation of	
	genes. Browsers genome project. Examples of applications. Data analysis.	
Modeling of Biomolecules	Prediction of the characteristics of the protein structure. Obtaining three-dimensional	
	models.	
	Homology modeling. Modeling by threading or by remote homology design.	
	Ab initio methods. Evaluation of the prediction methods.	

Planning

Competencies	Ordinary class	Student?s personal	Total hours
	hours	work hours

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Guest lecture /	Oral presentation complemented by the use of audiovisual media for the purpose of transmitting knowledge and facilitate
keynote speech	learning.
Seminar	Working technique that aims to make powerpoint and word documents on a topic proposed by the teacher.
Laboratory practice	Methodology that allows students to learn effectively through practical activities (demonstrations, simulations, etc.) the theory
	of a field of knowledge through the use of information technology and communications.

	Personalized attention
Methodologies	Description
Seminar	The personal attention that is described in relation to these methodologies are conceived as moments of classroom student
Laboratory practice	work with teacher, this involve mandatory participation for the student.
	The manner and time in which it was held is indicated in relation to each activity along the course according to the work plan of
	the course

Assessment			
Methodologies	Competencies	Description	Qualification
Guest lecture /	A3 A9 A11	A test will be realized to assess the knowledge acquired in the course of lectures.	45
keynote speech		With this methodology the A5, B2 skills will be assessed	
Seminar	B3 B9 C6 C8 C9	The seminar will be evaluated by taking into account the ability to extract the most relevant information obtained for the student, the capacity for teamwork and the ability to expose in public.	25
		Whit this methodology B1, B3 and B9 competencies will be evaluated	
Laboratory practice	B1 B2 C3 C9	Regular attendance and active participation in the lab, as well as the bulletin responses made by students will be assessed. They also perform a test to assess the knowledge acquired.	30
		With this methodology the A5 and B2 competencies will be assessed	

Assessment comments

Students presented in the first opportunity of June will be eligible to get honours.

Students with a part-time assistance or exemption may agree with teachers specific methods for evalaution early in the course .

Also students engaged as "SEMIPRESENCIALES" should contact the teachers in the first weeks.
