	Study programme competences / results
Code	Study programme competences / results

A3	Innovate in the methods of synthesis and chemical analysis related to the different areas of chemistry
A9	Promote innovation and entrepreneurship in the chemical industry and in research.
B1	Possess knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often within a
	research context
B3	Students should be able to integrate knowledge and handle complexity, and formulate judgments based on information that was
	incomplete or limited, include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments.
B5	Students must possess learning skills to allow them to continue studying in a way that will have to be largely self-directed or autonomous.
B7	Identify information from scientific literature by using appropriate channels and integrate such information to raise and contextualize a
	research topic
B8	Evaluate responsibility in the management of information and knowledge in the field of Industrial Chemistry and Chemical Research
B9	Demonstrate ability to analyze, describe, organize, plan and manage projects
B10	Use of scientific terminology in English to explain the experimental results in the context of the chemical profession
C1	CT1 - Elaborar, escribir e defender publicamente informes de carácter científico e técnico
C3	CT3 - Traballar con autonomía e eficiencia na práctica diaria da investigación ou da actividade profesional.
C4	CT4 - Apreciar o valor da calidade e mellora continua, actuando con rigor, responsabilidade e ética profesional.

Learning outcomes			
Learning outcomes	Stud	y progra	amme
	COI	npetenc	;es/
		results	
Describe the aspects of physical laws that predominate in the behavior of nanometer-sized systems.	AC9	BC1	CC3
		BC3	
		BC8	
		BC9	
Define which construction methods of nanostructures should be chosen based on the desired properties.	AC3	BC1	CC1
		BC3	
		BC5	
Describe some methods for the synthesis of nanoparticles.	AC3	BC7	CC1
	AC9	BC10	CC4
Describe some methods for surface modification of nanoparticles.	AC3	BC8	CC1
	AC9	BC9	CC4
		BC10	
Explain the phenomenon of self-assembly, describe the different procedures available to achieve this.	AC3	BC3	CC1
	AC9	BC5	CC3
		BC8	
Know the current and potential applications of nanotechnology.	AC3	BC1	CC1
	AC9	BC7	CC4
		BC8	
		BC10	

Contents		
Торіс	Sub-topic	
Theme 1.Introduction and historical perspective on advanced	This first topic will be a historical introduction on the development of nanomaterials. A	
materials	classification of the materials will be established, as well as a brief description of the	
	fields of activity of the different nanomaterials.	
Theme 2. Strategies in the search for new materials	This topic will address the different strategies in the synthesis of nanomaterials, with	
	special attention to those that allow us a control in the structure and composition.	
Theme 3. Nanochemistry and nanomaterials	This topic will introduce the nanomaterials and the main methods of synthesis	
Theme 4. Inorganic nanomaterials: metal, semiconductors,	This topic will introduce the main methods of synthesis of nanomaterials with special	
magnetic oxides	emphasis on metallic, semiconductors, and magnetic oxides.	

Theme 5. Organic Nanomaterials: Carbon Nanotubes,	In this topic we will introduce the main methods of synthesis of nanomaterials with
Graphene, Polymeric Materials	special emphasis on carbon nanotubes, graphene and polymeric materials.
Theme 6. Surface modification and hybrid materials	This topic will introduce the main methods of surface modification of nanomaterials.
	Different hybrid materials will also be introduced.

	Methodologies
Methodologies	Description
Seminar	Seminars carried out with their own teaching staff, or with invited professionals from the business sector, administration or
	other universities. Interactive sessions related to different subjects with discussions and exchange of opinions with students
Supervised projects	Work in small groups that will have the purpose of studying a topic, a case, etc. Through the discussion among the members of the group.
Mixed	Proof that will be made in the calendar agreed by the Faculty Board. Its objective is to contribute to the evaluation of the
objective/subjective	knowledge and skills acquired by the students and the ability to relate to this and to obtain an overview of the subject.
test	
Guest lecture /	In the master session the contents of the corresponding topics will be introduced, highlighting their most important aspects and
keynote speech	stopping particularly in the fundamental concepts and / or more difficult to understand for the students.

Personalized attention		
Methodologies	Description	
Seminar	Seminar The teaching methodology proposed is based on the work of the student, who becomes the main responsible for its	
	educational process.	

		Assessment	
Methodologies	Competencies /	Description	Qualification
	Results		
Seminar	A3 A9 B1 B3 B5 B7	Valoraranse tanto as respostas dos alumnos como a súa participación nas	15
	B8 B9 B10 C1 C3 C4	correspondentes actividades presenciais. Ocasionalmente e a requirimento do	
		profesorado, o alumnado deberá entregar os boletíns de problemas que tamén	
		poderán ser avaliados.

		profesorado, o alumnado deberá entregar informes que tamén poderán ser avaliados.	

Mixed objective/subjective test A3 A9 B1 B3 B5 B7 Cor B8 B9 B10 C1 C3 C4 con

Consistirá nunha proba de conxunto que se celebrará ó final do cuadrimestre. Poderá constar tanto de preguntas de desenvolvemento, como de preguntas curtas ou de tipo test e de problemas que serán semellantes ós realizados ó longo do curso.

65

Assessment	comments
------------	----------

General considerations:

-It is very important to attend all classes.

-It is essential to consult the bibliography and try to complete with

advanced aspects the most fundamental concepts that are explained in the

class.

-The evaluation of this subject will be done through continuous assessment and the completion of a final exam.

-The continuous evaluation will have a weight of 35% in the grade of the subject. The rest will be assigned to the final exam result.

Recommendations for evaluation

## The

student should review the theoretical concepts introduced in the

different topics using the support material provided by the teaching

staff and the bibliography recommended for each topic. The

degree of accuracy in the resolution of the proposed exercises provides

a measure of the student's preparation to face the final exam of the

subject. Those

students who find important difficulties in working the proposed

activities should consult the teacher, in order that the teacher can

analyze the problem and help solve those difficulties.
