| General description | The subject is in the first year of the Degree, and the only precedent that most students have is Biology knowledge taken    |          |         |                 |           |
|                     | during Secondary Education.  |          |         |                 |           |
|                     | Cell Biology is included in the Basic Training module, therefore it is framed in the first semester of the first year of the |          |         |                 |           |
|                     | Degree, in order to provide students with the basic knowledge and basic skills necessary for other subjects.                 |          |         |                 |           |
|                     | In Cell Biology, different aspects of cells are studied in an integrated way and not only the merely structural one.         |          |         |                 |           |

| Contingency plan | 1. Modifications to the contents   |
|------------------|--|
|                  | No changes are planned in the contents.  |
|                  |  |
|                  | 2. Methodologies   |
|                  | *Teaching methodologies that are maintained  |
|                  | The teaching methodologies described in this teaching guide will be maintained, but will be adapted to the online modality.  |
|                  | *Teaching methodologies that are modified  |
|                  | The methodology will be adapted to the telematic modality, carried out through Microsoft Teams. In addition, all the   |
|                  | material to be used will be made available to students on the Moodle platform.   |
|                  | The laboratory practices will be adapted to the existing circumstances and, if necessary, will be replaced by non-contact  |
|                  | activities (viewing of methodological videos, study of microscopy images, case studies, analysis and interpretation of data  |
|                  | ).   |
|                  | The tests or exams will be carried out through the Moodle platform.  |
|                  | The doubts that are raised to the students will be dealt with electronically.  |
|                  |  |
|                  | 3. Mechanisms for personalized attention to students   |
|                  | Personalized attention will be limited to telematic means.   |
|                  | Moodle: whenever it is required (according to the student's need or demand).   |
|                  | Microsoft Teams: whenever it is required (according to the student's need or demand).  |
|                  | E-mail: whenever required (at the request of the student body). Use to make inquiries, request virtual meetings to resolve   |
|                  | doubts or other clarifications related to the matter.  |
|                  |  |
|                  | 4. Modifications in the evaluation   |
|                  | The evaluation system included in the teaching guide is maintained, although the tests will be carried out electronically  |
|                  | through Moodle.  |
|                  |  |
|                  | *Evaluation observations: The evaluation criteria and the observations collected in the teaching guide are maintained.   |
|                  | All d'Continue to the biblic membrane to second and the second se<br>Second second sec |
|                  | 5. Modifications to the bibliography or webgraphy  |
|                  | No modifications are foreseen. If necessary, supplementary means will be provided.   |

|      | Study programme competences / results  |
|------|--|
| Code | Study programme competences / results  |
| A3   | CE3 - Reconocer y analizar problemas físicos, químicos, matemáticos, biológicos en el ámbito de la Nanociencia y Nanotecnología, así       |
|      | como plantear respuestas o trabajos adecuados para su resolución, incluyendo el uso de fuentes bibliográficas.                             |
| A6   | CE6 - Manipular instrumentación y material propios de laboratorios para ensayos físicos, químicos y biológicos en el estudio y análisis de |
|      | fenómenos en la nanoescala.  |
| A7   | CE7 - Interpretar los datos obtenidos mediante medidas experimentales y simulaciones, incluyendo el uso de herramientas informáticas,      |
|      | identificar su significado y relacionarlos con las teorías químicas, físicas o biológicas apropiadas.                                      |
| A8   | CE8 - Aplicar las normas generales de seguridad y funcionamiento de un laboratorio y las normativas específicas para la manipulación de    |
|      | la instrumentación y de los productos y nanomateriales.  |
| B3   | CB3 - Que los estudiantes tengan la capacidad de reunir e interpretar datos relevantes (normalmente dentro de su área de estudio) para     |
|      | emitir juicios que incluyan una reflexión sobre temas relevantes de índole social, científica o ética                                      |
| B4   | CB4 - Que los estudiantes puedan transmitir información, ideas, problemas y soluciones a un público tanto especializado como no            |
|      | especializado  |
| B6   | CG1 - Aprender a aprender  |
| B8   | CG3 - Aplicar un pensamiento crítico, lógico y creativo.   |

| C3 | CT3 - Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su  |
|----|---|
|    | profesión y para el aprendizaje a lo largo de su vida   |
| C7 | CT7 - Desarrollar la capacidad de trabajar en equipos interdisciplinares o transdisciplinares, para ofrecer propuestas que contribuyan a un |
|    | desarrollo sostenible ambiental, económico, político y social.  |
| C8 | CT8 - Valorar la importancia que tiene la investigación, la innovación y el desarrollo tecnológico en el avance socioeconómico y cultural   |
|    | de la sociedad  |

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies           |   |  |  |  |
|-------------------------|---|--|--|--|
| Methodologies           | Description   |  |  |  |
| Introductory activities | It consists of a presentation session of the subject where the different sections contained in the teaching guide are exposed |  |  |  |
|                         | and explained (competences, program-contents, planning, methodology, evaluation, bibliographic resources, etc.) and where     |  |  |  |
|                         | the students can propose any doubt or question related to them.   |  |  |  |
|                         | Both the teaching guide of the subject and the calendars and times of the course will be available on the Moodle platform and |  |  |  |
|                         | on the website of the Faculty of Sciences of the UDC.   |  |  |  |

| Guest lecture /        | 50-minute face-to-face sessions on the basic content of the program. The teacher will explain the theoretical foundations of the  |
|------------------------|---|
| keynote speech         | subject through drawings, diagrams or computer presentations (content that will be made available to students through the   |
|                        | Moodle platform). The teacher will also solve the doubts and questions raised by the students. Likewise, in order to take full  |
|                        | advantage of these, it is recommended that the students have previously reviewed the fundamental aspects of these topics in   |
|                        | the recommended texts and completed the relative questionnaires regarding the same.   |
| Laboratory practice    |   |
|                        | In laboratory practices, in addition to addressing some theoretical aspects related to experimental methodologies, the manual   |
|                        | skills typical of simple Cell Biology techniques are acquired. The student must make a report detailing the objective of each   |
|                        | practice, the protocol followed and the results. In addition, you must describe, draw and interpret the observations made. This   |
|                        | memory will represent 20% of the final grade for the course. Attendance at practices is a necessary condition to be evaluated.  |
|                        | In the event of circumstances that prevent attendance, these must be communicated in advance to the teacher in charge or  |
|                        | duly justified. During these sessions, the teacher will present the objectives of the practice and guide the observations of the  |
|                        | students, clarifying the doubts that arise.   |
| Objective test         | 2 of the sessions in small groups will be devoted to conducting objective tests, in order to know the degree of assimilation of   |
|                        | the content taught. The activities delivered will be resolved in small groups, assuming the same 10% of the final grade.  |
| Mixed                  | This category includes both the partial / learning controls that will be carried out throughout the course, as well as the final  |
| objective/subjective   | exam on the theoretical and practical contents of the subject, all of them with test-type and / or short-answer questions (or   |
| test                   | relatively short) on the contents of the master classes and sessions in small groups. In this way, it will be possible to know the  |
|                        | way in which the students are assimilating the contents and improve the processes in progress and the performance achieved.   |
| Collaborative learning | The second section of the second se   |
|                        | Inroughout the semester, 4 sessions will be dedicated to working in small groups (10-12 students). During the sessions,   |
|                        | various topics related to the contents of the subject will be discussed and discussed, and activities related to them will be   |
|                        | various topics related to the contents of the subject will be discussed and discussed, and activities related to them will be carried out, for which specific bibliography will be used (printed or through the use of electronic resources).   |

| Seminar              | B4 B8 C7          | At the end of each of the two seminar session, the student must provide a written copy  | 10 |
|                      |                   | of the summary / outline / glossary of terms on the subject of the agenda designated in |    |
|                      |                   | advance by the teacher. Likewise, there will be a discussion by the teacher of what the |    |
|                      |                   | students have extracted from their previous work on this topic.                         |    |
|                      |                   | Both the delivery of the summary / outline / glossary and active participation compute  |    |
|                      |                   | for the final grade of the subject; each session will account for 5% of it.             |    |

Assessment comments

GENERAL CONSIDERATIONS

Attendance at practices is a necessary condition for the consideration of submitted and to be able to take the final exam of the subject.

Students will have two official opportunities

to pass the subject. Likewise, there will be 2 liberatory theoretical partial exams throughout the semester.

The grade of Not Presented will be applied in the event that the student does not appear for the corresponding tests in the official assessment opportunities or does not carry out the laboratory practices.

## EVALUATION ASPECTS AND CRITERIA 1. STUDENTS WITH FULL DEDICATION

In the final quarter opportunity, the different sections included in the evaluation system will be taken into account for the computation of the final grade, each of which must be passed to proceed to the calculation of the final grade.

There will be two theoretical and written partial exams (each computes 30% of the final grade), as well as a final exam for those students who have not passed these partial exams or who have not submitted to them, representing 60% of the final grade.

Both the objective tests and the seminar sessions will each represent 10% of the final grade. The realization and delivery in writing of the memory of practices will suppose 20% of the final qualification of the subject. On the second opportunity, the theoretical and / or practical parts not passed may be recovered, assuming 80% and 20% of the final grade, respectively. 2. STUDENTS WITH RECOGNITION OF DEDICATION TO PART TIME AND ACADEMIC DISPENSE OF EXEMPTION FROM ASSISTANCE Both in the final opportunity of the semester and in the second opportunity, the grade obtained in the theoretical exam and the one corresponding to the practical part (completion and written delivery of the practice report) will be taken into

account for the calculation of the overall grade. ) representing 80% and 20% of the final grade, respectively.

| The adaptation to the first year of university education supposes an important effort for every student. The learning will include aspects such as:  |
| incorporation of fundamental concepts, familiarization with the work in the laboratory, elaboration of simple memories of practices, elaboration and |
|  |

incorporation of fundamental concepts, familiarization with the work in the laboratory, elaboration of simple memories of practices, elaboration and exposition of summaries / schemes / glossaries of terms and the search for information. Therefore, constant study and periodic reviews as the course progresses are very important. It is recommended to work on the subject of the master classes beforehand, as well as taking the relevant notes during them.
