| General description | Computer architecture, organization and design. Introduction to the main performance metrics. Evaluation and optimization of the performance in the building blocks that compound a computer. Introduction to parallel and storage sytems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |        |                                                                                                                                                                                                                                   |           |
| Contingency plan    | 1. Modifications to the contents<br>- No changes<br><br>2. Methodologies<br>*Teaching methodologies that are maintained<br>- Lectures will be carried out through Microsoft Teams.<br>- Laboratory practice and problem solving sessions will be addressed using Microsoft Teams and evaluated online.<br>- Objective test will be an online test using Moodle.<br>*Teaching methodologies that are modified<br>- None<br><br>3. Mechanisms for personalized attention to students<br>- E-Mail: Daily. Used for addressing questions and requesting virtual meetings.<br>- Moodle: Daily. It contains the online resources the students need.<br>- Microsoft Teams: Daily. Used for addressing questions and requesting virtual meetings in real time. Weekly big group sessions following the Faculty schedule, and small group sessions on demand.<br><br>4. Modifications in the evaluation<br><br>*Evaluation observations:<br>- No changes<br><br>5. Modifications to the bibliography or webgraphy<br>- No changes. Everything is available online at Moodle |        |                                                                                                                                                                                                                                   |           |

## Study programme competences

| Code | Study programme competences                                                                                                                  |
|------|----------------------------------------------------------------------------------------------------------------------------------------------|
| A15  | Capacidade de coñecer, comprender e avaliar a estrutura e a arquitectura dos computadores, así como os compoñentes básicos que os conforman. |
| B1   | Capacidade de resolución de problemas                                                                                                        |
| C6   | Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.            |
| C7   | Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.                                                             |

| Learning outcomes                                                                                                               |  |                             |                |
|---------------------------------------------------------------------------------------------------------------------------------|--|-----------------------------|----------------|

| Methodologies                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Guest lecture / keynote speech | <p>This type of sessions are master classes complemented with the usage of audiovisual media and the introduction of debating with students phases. The objective is to transfer knowledge and ease the learning process. There will be presentations about the main contents of the subject. Usually, this type of sessions will be an starting point for other activities related to the same topic.</p> <p>In this type of sessions, it will be promoted the adquisition of knowledge associated to competence A15.</p>                                                                                                                                                    |
| Problem solving                | <p>In this type of classes, the teacher will solve several problems which will reinforce the knowledge acquired in the keynote speeches.</p> <p>This type of session will promote the acquisition of competences A15 and B1 as they improve the capacity of the student to solve computer architecture problems.</p>                                                                                                                                                                                                                                                                                                                                                          |
| Laboratory practice            | <p>This type of sessions propose computer driven activities that reinforce the knowledge acquired in other types of sessions.</p> <p>They will allow the familiarization of the student with practical aspects of the subject. The sessions will be completed with a set of self-evaluation tests which let students to find out if they have acquired the skills associated to a particular session.</p> <p>This type of sessions will promote the acquisition of competence A15, as the laboratory activities requires that the student can solve computer architecture problems. As he has to use its knowledge to solve the problems, it also acquires competence C6.</p> |
| Objective test                 | <p>This activity evaluates the knowledge and the capacity acquired by the students in this subject.</p> <p>It is written final exam which includes questions to evaluate objectively students.</p> <p>This test check the acquisition of competence A15.</p> <p>In general, all the evaluation activities promote the acquisition of competence C7, as it places value on learning.</p>                                                                                                                                                                                                                                                                                       |

| Personalized attention                 |                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methodologies                          | Description                                                                                                                                                                                                                                                                                                                                                                              |
| Problem solving<br>Laboratory practice | <p>The personalized attention in the laboratory and the problem solving sessions is important to guide the students in their development and learning process. Besides, this attention will serve to validate and evaluate the work of the students in the different stages of their development.</p> <p>It is also recommended that students attend to tutorials when they need it.</p> |

| Assessment          |              |                                                                                                                                                                                               |               |
|---------------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| Methodologies       | Competencies | Description                                                                                                                                                                                   | Qualification |
| Problem solving     | A15 B1       | There will be several tests to evaluate the capacity of the students to solve problems autonomously and creatively.                                                                           | 40            |
| Laboratory practice | A15 C6       | There will be several tests to evaluate the capacity of the students to solve practical problems using the tools introduced in the lab sessions.                                              | 20            |
| Objective test      | C7           | It will be checked that the student has acquired the knowledge introduced in the master classes, and that he is able to solve similar problems to those seen in the problem solving sessions. | 40            |

## Assessment comments

The tests related to problem solving are the 40% of the final grade, the tests related to the laboratory sessions are the 20% and the final exam is the remaining 40%. The student has to reach at least a 50% of the total grade to pass the subject.

If the student doesn't attend to the tests associated to the laboratory sessions or problem solving sessions, it will lose this part of the grade for the first attempt. It cannot recover it.

In the second attempt, the student can obtain the 100% of the grade, including that one associated to the above mentioned tests.

The student will be graded as "absent" if they don't attend to the final exam.

The part-time students and those that are allowed by the university to not attend to the classes will make the same evaluation tests and exams than the other students. We will make sure that their schedules are compatible with the period of time within they have to attend to classes.
