

Teaching Guide						
Identifying Data				2020/21		
Subject (*)	Computer Infrastructure Engineering		Code	614G01059		
Study programme	Grao en Enxeñaría Informática					
Descriptors						
Cycle	Period	Year	Type	Credits		
Graduate	1st four-month period	Fourth	Optional	6		
Language	Galician					
Teaching method	Hybrid					
Prerequisites						
Department	Enxeñaría de Computadores					
Coordinador	Pardo Martínez, Xoán Carlos	E-mail	xoan.pardo@udc.es			
Lecturers	Pardo Martínez, Xoán Carlos	E-mail	xoan.pardo@udc.es			
Web						
General description	Esta materia supón unha continuación da materia de Xestión de Infraestruturas orientada ao estudo de solucións tolerantes a fallas e de alta dispoñibilidade en centros de procesamento de datos (CPD) e unha introdución ao uso de tecnoloxías de virtualización nos CPDs e aos fundamentos da Computación na Nube (Cloud Computing).					
Contingency plan	<ol style="list-style-type: none"><li>1. Modifications to the contents</li><li>2. Methodologies *Teaching methodologies that are maintained</li><li>*Teaching methodologies that are modified</li><li>3. Mechanisms for personalized attention to students</li><li>4. Modifications in the evaluation *Evaluation observations:</li><li>5. Modifications to the bibliography or webgraphy</li></ol>					

Study programme competences	
Code	Study programme competences
A36	Capacidade para comprender, aplicar e xestionar a garantía e a seguridade dos sistemas informáticos.
A37	Capacidade para analizar, avaliar, seleccionar e configurar plataformas hardware para o desenvolvemento e execución de aplicacións e servizos informáticos.
B1	Capacidade de resolución de problemas
B3	Capacidade de análise e síntese
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrentarse.

Learning outcomes									
Learning outcomes			Study programme competences						
Know the software and hardware systems that allow the implementation of fault tolerant solutions			<table border="1"><tr><td>A36</td><td>B1</td><td>C3</td></tr><tr><td>A37</td><td>B3</td><td>C6</td></tr></table>	A36	B1	C3	A37	B3	C6
A36	B1	C3							
A37	B3	C6							

Coñecer as alternativas tecnolóxicas para implantar solucións de alta disponibilidade nos centros de procesamento de datos	A36 A37	B3	C3
Saber configurar solucións de alta disponibilidade utilizando as ferramentas informáticas axeitadas	A36 A37	B1	C3
Coñecer os fundamentos da virtualización e as súas aplicacións más relevantes nos centros de procesamento de datos	A37	B3	C3 C6
Coñecer os fundamentos da computación na nube (Cloud Computing)	A37	B3	C6
Saber utilizar os servizos básicos de provedores cloud públicos	A37	B1	C3

## Contents

Topic	Sub-topic
Tolerancia a fallas, redundancia e alta disponibilidade	
Servidores e clusters de servidores	
Module I: High Availability Data Center Architectures	1.- Introduction to High Availability (HA) 2.- Architecture of a Data Center 3.- Servers of a Data Center for HA 4.- Clusters of a Data Center for HA
Module II: Virtualization and Cloud Computing	1.- Virtualization technologies 2. Virtualization of the Data Center 3.- Computing in the Cloud (Cloud Computing)
Computación na nube (Cloud Computing)	

## Planning

Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Laboratory practice	B1 C3	14	42	56
Objective test	A36 A37	3	0	3
Supervised projects	A37 B3 C6	6	18	24
Guest lecture / keynote speech	A36 A37 C6	21	42	63
Personalized attention		4	0	4

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

## Methodologies

Methodologies	Description
Laboratory practice	Activity that allows students to learn and consolidate the knowledge already acquired through the realization of practical sessions in computers.
Objective test	Test that will be done at the end of the semester, on the contents of the lectures and the laboratory practices.
Supervised projects	Resolution of a study case of greater difficulty to those made in the practices, studying in greater depth a specific application directly related to the contents of the subject. A report on the work carried out must be submitted, summarizing the main conclusions of it.
Guest lecture / keynote speech	Presentation complemented with the use of audiovisual media and the introduction of debate phases with the students. All this in order to transmit knowledge and facilitate learning.

## Personalized attention

Methodologies	Description
---------------	-------------

Laboratory practice Supervised projects	Personalized attention during the laboratories will be used to guide and verify the work that students are doing according to the instructions given to them, depending on the specific lab.  All the lecturers will also propose a tutorial schedule in which the students can solve any doubt. The tutorials are recommended as a fundamental part of the learning support.
--	---

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	B1 C3	As prácticas de laboratorio consistirán en diferentes actividades que se proporán ao longo do cuatrimestre relacionadas cos contidos da materia.	40
Objective test	A36 A37	A proba obxectiva realizarase ao final do cuatrimestre e estará formada por preguntas relacionadas co temario desenvolvido nas sesións maxistrais e nas prácticas.	40
Supervised projects	A37 B3 C6	Os traballos tutelados serán sobre algún tema a convir entre as/os alumnas/os e o profesor. Valoraranse entre outros o cumprimento das especificacións, a contribución persoal, e a calidade das explicacións e da presentación dos resultados.	20

Assessment comments
FIRST OPPORTUNITYThe subject consists of two clearly differentiated modules. Each module will propose practices (laboratory practices and / or supervised work). To pass the practices it will be mandatory to submit all of them. The final mark will be calculated as the weighted average of the practice marks (laboratory practices and / or supervised work) and the objective test mark. To pass it, it will be necessary to reach at least 40% in each one of the marks and 50% in the average. SECOND OPPORTUNITYIn the second opportunity, the same assessment criteria will be followed. There will be a second submission date for the practices, and the marks of those parts that have reached a minimum of 40% at the first opportunity will be conserved for the second opportunity. STUDENTS AT PART TIMEThe assessment will be the same as that of full-time students. FRAUDIn the case of detecting any fraud in the evaluation tests, the sanctioning measures provided for in the university regulations will be applied.
