General description	<p>The student will learn to use these specific mathematical tools, but also they will improve their skills in developing new methods and acquiring new technologies, to consult bibliographic references and online resources, to elaborate a memory in a rigorous and systematic manner, to give lectures to others and collaborate with other colleagues, etc. In general they will develop a sense of scientific and rational thinking, capable to adapt to unexpected situations which may arise in their future practice as an engineer.</p>			

Contingency plan	<p>1. Modifications to the contents No changes will be made.</p> <p>2. Methodologies *Teaching methodologies that are maintained Collaborative learning, Schemes, Tutored works, Analysis of documentary sources, Virtual debate, Guided discussion, Initial activities.</p> <p>*Teaching methodologies that are modified Master session. They will become virtual videos and videoconferences with students through the Teams platform. They are recorded in Stream. They will always be held at the official time set by the School Board. ? Problem solving. They will become virtual sessions of doubts in solving problems and collections of solved exercises made available to students in OneNote. They will always be held at the official time set by the School Board. ? Objective test. If it cannot be done in person, the objective test will be carried out with the online assessment tools that the University makes available to the community.</p> <p>3. Mechanisms for personalized attention to students Email: During working hours. To make brief questions and request virtual meetings to solve doubts during tutoring hours. - Moodle: Daily. According to the need of the students. They have ?thematic forums associated with the modules ?of the subject, to formulate the necessary queries. - Teams: Weekly single group sessions and interactive teaching groups for the advancement of theoretical and practical content in the time slot assigned to the subject in the faculty classroom calendar. This dynamic allows a standardized follow-up and adjusted to the learning needs of the students to develop the works of the subject.</p> <p>4. Modifications in the evaluation Two possible itineraries are established:</p> <p>1) Students who have carried out continuous assessment during the course: 1a) Methodology: supervised work and problem solving Qualification weight: 50% Description: Students who take the continuous assessment tests during the course (face-to-face and / or virtual) will be qualified with the weighted average mark they obtained 1b)Methodology: objective test Qualification weight: 50% Description: Individual test of assimilation of theoretical-practical knowledge and problem solving, with the possibility of oral defense of any of the proposed problems.</p> <p>2) Students who did not carry out continuous assessment during the course or renounce to it. 2a) Methodology: objective test Qualification weight: 50% Description: Individual test of assimilation of theoretical-practical knowledge.</p> <p>2b) Methodology: Solving exercises. Qualification weight: 50% Description: Resolution of practical problems with the possibility of oral defense of any of the proposed problems.</p>
------------------	--

*Evaluation observations:

Students who take the second itinerary (without continuous evaluation) will be examined in the entire subject and must achieve a minimum of 35% in the objective test to be able to do the problem solving part.

5. Modifications to the bibliography or webgraphy

No changes will be made. They already have all the materials for the subject

Digitized in Moodle as well as various links to electronic books available through the UDC Library to facilitate access to the bibliography for students.

Assessment comments	

The students participants in the EHEA should attend a minimum of 80% of the lessons, being the continuous assessment of 50% of the final score.

The other 50% of the score will be obtained from the partial tests that will take place throughout the term.

The students who have followed the continuous assessment but have not reached the 50% of the score through the partial tests will have a chance to reach it through a final test. This final test will include all topics of the term (the partial tests do not exclude topics)

The students who decide to not take part in the EHEA will be evaluated as follows: 1) an objective test that includes an individual test of assimilation of practical-theoretical knowledge and 2) a problem solving test. Each test will be 50% of the final score.

Those students with recognition of part-time dedication and academic exemption of attendance, as established by the norm that regulates the regime of dedication to the study of undergraduate students in the UDC (Arts 2.3, 3.b, 4.3 e 7.5) (04/05/2017), and stay on the path and benefit from continuous assessment must attend at least 50% of the course. They are exempt from attending the theoretical classes in case they are not able to attend. If they are not able to attend the practical test neither, they should attend tutorials at the professor office, where they will be asked to perform equivalent (similar) tests.
