Identifying Data				2020/21		
Subject (*)	Álgebra lineal II		Code	632G02008		
Study programme	Grao en Tecnoloxía da Enxeñaría Civil					
Descriptors						
Cycle	Period	Year	Type	Credits		
Graduate	2nd four-month period	First	Basic training	6		
Language	Spanish					
Teaching method	Face-to-face					
Prerequisites						
Department	Matemáticas					
Coordinador	Fuentes Garcia, Luis	E-mail	luis.fuentes@udc.es			
Lecturers	Fuentes Garcia, Luis Taboada Vazquez, Raquel	E-mail	luis.fuentes@udc.es raquel.taboada@udc.es			
Web	caminos.udc.es/info/asignaturas/grado_tecic/101/AL2/index.html					
General description	The aim of the course is to provide a solid background in linear algebra and mathematical foundation engineering. This second part of the course focuses on studying the geometrical applications of the theory of vectorial spaces.					
Contingency plan	<p>1. Modifications to the contents: No changes.</p> <p>2. Methodologies. *Teaching methodologies that are maintained: The same methodologies are maintained, with a slight difference in two of them indicated in the next point.</p> <p>*Teaching methodologies that are modified: The master sessions and problem solving seminars will be held online through the Microsoft Teams platform. In addition, 13 hours of master sessions will be replaced by problem solving seminars. Moreover, these will be complemented with the publication of explanatory videos.</p> <p>3. Mechanisms for personalized attention to students: Teams and e-mail. Every day at the student's request.</p> <p>4. Modifications in the evaluation: Written test (synchronous). (75%). Exam where concepts are methods of the subject are evaluated. Problem solving (asynchronous). (25%). A set of problems and works are proposed to practice the contents of each topic. The student has a period of several days to solve them.</p> <p>*Evaluation observations: The written test will be done through Moodle. The development of it will be monitored through Teams. In the case that a student has unsolvable connection problems during the test, an alternative date will be agreed individually with the affected person.</p> <p>5. Modifications to the bibliography or webgraphy: No changes.</p>					

Study programme competences	
Code	Study programme competences
A1	Capacidad para plantear y resolver los problemas matemáticos que puedan plantearse en el ejercicio de la profesión. En particular, conocer, entender y utilizar la notación matemática, así como los conceptos y técnicas del álgebra y del cálculo infinitesimal, los métodos analíticos que permiten la resolución de ecuaciones diferenciales ordinarias y en derivadas parciales, la geometría diferencial clásica y la teoría de campos, para su aplicación en la resolución de problemas de Ingeniería Civil.
B1	Que los estudiantes hayan demostrado poseer y comprender conocimientos en un área de estudio que parte de la base de la educación secundaria general, y se suele encontrar a un nivel que, si bien se apoya en libros de texto avanzados, incluye también algunos aspectos que implican conocimientos procedentes de la vanguardia de su campo de estudio
B2	Que los estudiantes sepan aplicar sus conocimientos a su trabajo o vocación de una forma profesional y posean las competencias que suelen demostrarse por medio de la elaboración y defensa de argumentos y la resolución de problemas dentro de su área de estudio
B3	Que los estudiantes tengan la capacidad de reunir e interpretar datos relevantes (normalmente dentro de su área de estudio) para emitir juicios que incluyan una reflexión sobre temas relevantes de índole social, científica o ética
B4	Que los estudiantes puedan transmitir información, ideas, problemas y soluciones a un público tanto especializado como no especializado
B5	Que los estudiantes hayan desarrollado aquellas habilidades de aprendizaje necesarias para emprender estudios posteriores con un alto grado de autonomía
B6	Resolver problemas de forma efectiva.
B7	Aplicar un pensamiento crítico, lógico y creativo.
B8	Trabajar de forma colaborativa.
B10	Comunicarse de manera efectiva en un entorno de trabajo.
B15	Claridad en la formulación de hipótesis.
B16	Capacidad de autoaprendizaje mediante la inquietud por buscar y adquirir nuevos conocimientos, potenciando el uso de las nuevas tecnologías de la información y así poder enfrentarse adecuadamente a situaciones nuevas.
B17	Capacidad para aumentar la calidad en el diseño gráfico de las presentaciones de trabajos.
B18	Capacidad para aplicar conocimientos básicos en el aprendizaje de conocimientos tecnológicos y en su puesta en práctica.
B19	Capacidad de realizar pruebas, ensayos y experimentos, analizando, sintetizando e interpretando los resultados.
C1	Expresarse correctamente, tanto de forma oral como por escrito, en las lenguas oficiales de la comunidad autónoma.
C2	Dominar la expresión y la comprensión de forma oral e escrita de un idioma extranjero.
C3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de la vida.
C4	Desarrollarse para el ejercicio de una ciudadanía abierta, culta, crítica, comprometida, democrática y solidaria, capaz de analizar la realidad, diagnosticar problemas, formular e implantar soluciones basadas en el conocimiento y orientadas al bien común.
C6	Valorar críticamente el conocimiento, la tecnología y la información disponible para resolver los problemas con que deben enfrentarse.
C7	Asumir como profesional y ciudadano la importancia del aprendizaje a lo largo de la vida.
C8	Valorar la importancia que tiene la investigación, la innovación y el desarrollo tecnológico en el avance socioeconómico y cultural de la sociedad.

Learning outcomes			
Learning outcomes			Study programme competences
To know and to understand the basic theory of linear algebra required in civil engineering , especially the geometric applications of vector spaces.		A1 B1 B6 B7 B8 B15	C3

Know, understand and manage elementary mathematical notation.	A1	B1 B3 B5 B6 B7 B18	C1 C3 C6
Learn to express with precision and rigor.	A1	B4 B7 B10 B17	C1 C2
Learn to use the basic techniques of mathematical reasoning.	A1	B2 B3 B6 B7	C1
Understanding the importance of justifying the thesis and results in science	A1	B1 B3 B16 B19	C4 C6
Develop critical thinking and analytical skills .	A1	B2 B3 B7	C1 C4 C8
Learn to pose and solve mathematical problems of Linear Algebra.	A1	B2 B3 B6 B7 B8 B10 B15	C1

Contents		
Topic	Sub-topic	
Bilinear maps and homogenous tensors.	1. Bilinear maps and quadratic forms. 1.1 Bilinear maps. 1.2 Bilinear forms. 1.3 Quadratic forms. 1.4 Real quadratic forms. 2. Homogenous tensors and duality. 2.1 Duality. 2.2 Homogenous tensor. 2.3 Operations with homogenous tensors. 2.4 Simmetry and skewsimmetry.	

Euclidean vectorial spaces.	<ol style="list-style-type: none">1. Introduction to euclidean spaces.<ol style="list-style-type: none">1.1 Scalar product.1.2 Norm of a vector. Properties.1.3 Angle between two vectors.2. Orthogonality.<ol style="list-style-type: none">2.1 Orthogonal vectors.2.2 Orthogonal systems. Gram-Schmidt method.2.3 Singularities of orthonormal basis.2.4 Orthogonal projection.2.5 Symmetric endomorphisms.3. Orthogonal maps.<ol style="list-style-type: none">3.1 Definition.3.2 Properties.3.3 Eigenvalues and eigenvectors of an orthogonal map.3.4 Orientation of a basis3.5 Inverse and direct orthogonal maps.3.6 Classification of orthogonal maps in two and three dimensions.4. Vectorial product and triple product.<ol style="list-style-type: none">4.1 Definition.4.2 Properties.
Affine geometry.	<ol style="list-style-type: none">1. Affine space.<ol style="list-style-type: none">1.1 Definition and properties.1.2 System of reference.1.3 Affine varieties.1.4 Pencils of affine varieties.1.5 Distances and angles between affine varieties.1.6 Affine transformations.2. Projective space.<ol style="list-style-type: none">2.1 Introduction.2.2 Homogeneous coordinates.2.3 Proper points and points at infinity.2.4 Reference change in homogeneous coordinates.2.5 Equations of affine varieties in homogeneous coordinates.

Conics and quadric surfaces.	1. Conics. 1.1 Definition and equations. 1.2 Intersections of a conic and a line. 1.3 Polarity. 1.4 Important points and lines of a conic. 1.5 Description of nondegenerated conics: ellipse, parabola e hyperbola. 1.6 Change of reference. 1.7 Classification of conics. Reduced equation. 1.8. Pencils of conics. 2. Quadric surfaces. 2.1 Definition and equations. 2.2 Intersections of a quadric surface and a line. 2.3 Polarity. 2.4 Change of reference. 2.5 Important points, lines and planes of a quadric surface. 2.6 Classification of quadric surfaces. Reduced equation. 2.7 Description of quadric surfaces of rank 3 and 4.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A1 B2 B3 C1	27	32	59
Seminar	A1 B2 B3	27	33	60
Mixed objective/subjective test	A1 B2 B3	3	3	6
Workbook	A1 B2 B3	0	10	10
Problem solving	A1 B2 B3	0	10	10
Personalized attention		5	0	5

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	New mathematic concepts will be developed from examples familiar for the students, or explaining the questions are wished to be solved with them; from this their common characters will be abstracted causing its more accuracy definition. The theory which allows to solve the questions described at the beginning will be developed after. Students participation is desirable, sharing their doubts or comments as the class progresses.
Seminar	Simultaneously to the theoretical development of the matter collections of exercises are given. The goal is allowing students to practise the knowledge acquired at theoretical classes. At seminars the most important problems will be discussed.
Mixed objective/subjective test	Exam where concepts and methods of the subjects are evaluated.
Workbook	Before the beginning of each item, some notes about the contents are available for the students. The notes are intended as a complement of teacher's explanations. A previous reading of students familiarize them with an outline of what they will study.
Problem solving	Each student must solve individually some of the proposed problems.

Personalized attention

Methodologies	Description
Problem solving	We recommend using tutorials to ask any question regarding the subject, both theoretical and practical aspects.
Guest lecture / keynote speech	
Seminar	

Assessment

Methodologies	Competencies	Description	Qualification
Problem solving	A1 B2 B3	Each student must solve individually some of the proposed problems.	20
Mixed objective/subjective test	A1 B2 B3	Exam where concepts and methods of the subjects are evaluated.	80
