

Teaching Guide				
Identifying Data				2020/21
Subject (*)	Geometry of Illustrations		Code	670G01018
Study programme	Grao en Arquitectura Técnica			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Second	Obligatory	6
Language	Spanish/Galician			
Teaching method	Face-to-face			
Prerequisites				
Department	Expresión Gráfica Arquitectónica			
Coordinador	Pernas Alonso, María Inés	E-mail	ines.alonso@udc.es	
Lecturers	Hermida González, Luis Pernas Alonso, María Inés	E-mail	luis.hermida@udc.es ines.alonso@udc.es	
Web	euat.udc.es			
General description	<p>The Geometry of the Representation like continuation of the temario of the asignatura of Descriptive Geometry has like aim the geometrical rationalisation of the space subjects. In the academic field contributes the basic device on which support graphic disciplines more specialised like Architectural Graphic Expression, Topography and Technical Projects, as well as the employment of the Computer-aided Design and the Graphic Computing. It converts like this in the GRAMMAR of the graphic language, being necessary his knowledge to be able to express with correction and efficiency.</p> <p>It contributes to the configuration and rationalisation of a mental model of the reality, what commonly designates SEE IN THE SPACE, although it would be more exact the expression IMAGINE in the space.</p> <p>In the professional field the reading and interpretation of planes is one of the necessary tasks to the hour to execute a project of edificación, having to extract of the graphic documents all the necessary information for the correct execution of the work.</p> <p>In the field of the editorial of technical projects the Geometry of the Representation contributes the training of the necessary space vision for the origin of the final solution that will be three-dimensional and inside the communicative function of the graphic language through planes and croquis, contributes the sustrato theoretical basic of the distinct Systems of Representation perspectivos: axonometría orthogonal, axonometría oblicua and conical perspective.</p>

## Study programme competences

Code	Study programme competences
------	-----------------------------

A2	Adquirir os coñecementos fundamentais sobre os sistemas e aplicacións informáticas específicos e xerais utilizados no ámbito da edificación.
A6	Coñecer e aplicar os distintos sistemas de representación así como as técnicas e procedementos de expresión gráfica aplicados á edificación e ás construcións arquitectónicas.
B1	Capacidade de análise e síntese.
B3	Capacidade para a procura, análise, selección, utilización e xestión da información.
B4	Coñecementos de informática relativos ao ámbito de estudo.
B5	Capacidade para a resolución de problemas.
B7	Capacidade de traballo en equipo.
B8	Capacidade para traballar nun equipo de carácter interdisciplinario.
B12	Razoamento crítico.
B14	Aprendizaxe autónomo.
B16	Capacidade de aplicar os coñecementos na práctica.
B17	Creatividade e innovación.
B27	Capacidade de comunicación a través da palabra e da imaxe.
C1	Adequate oral and written expression in the official languages.
C3	Using ICT in working contexts and lifelong learning.
C4	Acting as a respectful citizen according to democratic cultures and human rights and with a gender perspective.
C5	Understanding the importance of entrepreneurial culture and the useful means for enterprising people.
C6	Acquiring skills for healthy lifestyles, and healthy habits and routines.
C7	Developing the ability to work in interdisciplinary or transdisciplinary teams in order to offer proposals that can contribute to a sustainable environmental, economic, political and social development.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Learning outcomes		
Learning outcomes	Study programme competences	
Develop the capacity of "spatial imagination", so much so that the student can think"space" (three dimensions) an object represented in the plane (two-dimensional), such as to be represented in the drawing the previously imagined in space.	A2 A6	B1 B3 B4 B5 B7 B8 B12 B14 B16 B17 B27
Identify and understand the relations space and the connection between the space sensitive real and the space geometrically represented.	A2 A6	C1 C3 C4 C5 C6 C7 C8

Know the main bodies and surfaces geometric of application constructive and architectural, both at the level of concept mathematical as of analysis and representation graphics in them main systems of representation perspective.	A2 A6	B1 B3 B4 B5 B7 B8 B12 B14 B16 B27	C1 C3 C4 C5 C6 C7 C8
Know the main organs and geometric surfaces of constructive and architectural implementation both at the level of mathematical concept based on analysis and graphical representation on major systems from the perspective of representation.	A2 A6	B1 B4 B7 B8 B12 B14 B27	C1 C3 C4 C5 C6 C7 C8
Understand geometry as a graphic model able to establish spatial relationships that allow the understanding, description and control of constructive and architectural forms.	A2 A6	B1 B4 B7 B8 B12 B14 B27	C1 C3 C4 C5 C6 C7 C8
Know the terminology, fundamental concepts, conventions and the theoretical principles that define the elements of the systems of representation employed in building perspective.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Know the foundations theoretical of the different systems of representation perspective of application in building and architecture	A2 A6	B1 B4 B8 B12 B14 B16 B27	C1 C3 C4 C5 C6 C7 C8
Know and apply the methods and paths of systems of representation perspective of application in building and architecture.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8

Learn to evaluate through criteria logical, coherent and technical, the solution chosen in them paths and apply them methods and paths of each one of the systems of representation studied to its resolution of exercises practical.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Represent the primary geometric forms in any position in space.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Solve problems positional of intersections, parallelism, perpendicularity and problems metric of distances and determination of angles between those different elements geometric.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Represent simple geometric bodies in different systems with special emphasis on the representation of elements and applications of architectural, constructive character or use in the building.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Know the fundamentals General of the theory of shadows as rationalization geometric of the phenomenon luminous in the different systems of representation of application architectural.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Ability to apply the systems of representation spatial perspective: axonometric orthogonal, axonometric oblique and perspective conical.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Generate and interpret perspectives orthogonal axonometric and oblique under different conditions for the graphical definition of constructive elements.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8

Use of the ways of putting into perspective for the representation of character building and architectural proposals	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8
Ability to analyze and learn about the variations of the different elements of the linear perspective, restitution of images perspectives and their generation conditions as well as the basic concepts of the theory of shadows in perspective.	A2 A6	B1 B4 B8 B27	C1 C3 C4 C5 C6 C7 C8

Contents		
Topic	Sub-topic	
O DEBUXO ARQUITECTÓNICO E OS SISTEMAS DE REPRESENTACIÓN	O debuxo arquitectónico. Proxección e sección. Propiedades-invariantes- dos tipos de proxección. A biunivocidade dos sistemas de representación. Clasificación. Elementos xeométricos no espazo. Notacións.	
XENERALIDADES DO SISTEMA AXONOMÉTRICO	Concepto do sistema. Axonometría ortogonal. Principais axonometrías ortogonais.	
AXONOMETRÍA OBLÍCUA	Axonometría oblicua. Xeneralidades. Teorema de Pohlke-Schwarz. Perspectivas Cablera e Militar. Axonometrías seccionadas.	
PRÁCTICA DA AXONOMETRÍA	Paso de sistema Diédrico a Axonométrico e viceversa. Representación de figuras planas e corpos xeométricos.	
XENERALIDADES DA PERSPECTIVA LINEAL	Concepto de Perspectiva Lineal. Representación da recta. Punto de fuga. Representación do plano. Rectas de fuga. Clasificación das perspectivas lineais: - Segundo a posición do plano do cadre. - Segundo a posición do punto de vista.	
METODOS CLÁSICOS DA PERSPECTIVA	Paso de Sistema Diédrico á Perspectiva Lineal. Perspectiva Lineal Central e Oblicua por raios visuais.	
MEDICIÓN DIRECTA EN PERSPECTIVA	Perspectiva con puntos de medición. Concepto. Perspectiva Central. Perspectiva Oblicua.	
REPRESENTACIÓN DE FIGURAS ESPECIAIS	Cadrado referencial. Posicións horizontais, verticais e inclinadas. Figuras especiais. Mallas.	
INTRODUCIÓN Á TEORÍA DE SOMBRAS	Asoleo xeométrico. Sombras de puntos e liñas. Sombras de superficies planas. Contraproxección.	

SOMBRA EN PERSPECTIVA LINEAL	Luz solar paralela ao plano do cadro. Luz solar oblicua ao plano do cadro. - Sol diante do observador. - Sol detrás do observador.

Personalized attention		3	0	3

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Oral and graphic exhibition in the classroom that is complemented with the optional use of media and ICT as well as the introduction of questions to students in order to transmit knowledge and facilitate learning
Workshop	Desenvólvese coa finalidade de que o alumnado participe activamente no proceso de aprendizaxe, enfocándose á necesidade de valorar, responder e experimentar os coñecementos expostos nas sesións maxistrais a través de prácticas gráficas. Elíxense para a realización destas prácticas exemplos arquitectónicos reais ou elementos que se consideren axeitados. A formalización dos devanditos proxectos búscase adecuada ao nivel do curso no que se atopa o alumnado e contribúe a familiarizarse co feito arquitectónico.
Objective test	Test chart used for the evaluation of learning, whose distinctive feature is the ability to determine whether or not the given answers are correct. It is a measure that allows you to assess knowledge, abilities, skills, performance, skills, attitudes, intelligence, etc. It is applicable both for diagnostic, formative summative evaluation.

Personalized attention	
Methodologies	Description
Workshop	Atenderanse as necesidades e consultas do alumnado relacionadas co estudo e/ou temas vinculados coa materia, proporcionándolle orientación, apoio e motivación no proceso de aprendizaxe.  O "Alumnado con recoñecemento de dedicación a tempo parcial e dispensa académica de exención de asistencia", deberá pór en coñecemento do profesor correspondente, dita circunstancia, para poder concretar o desenvolvimeto desta actividade segundo considérese máis adecuada.

Assessment				
Methodologies	Competencies		Description	Qualification

Objective test	A2 A6 B1 B4 B5 B8 B12 B16 B17 B27 C1 C3 C4 C5 C6 C7 C8	Realizaranse dúas prácticas especiales ao longo do cuatrimestre.  Con estas prácticas avaliarase a transferencia dos coñecementos adquiridos polo estudantado nas diferentes partes da materia.  A porcentaxe da nota final será do 55%.  Para a aplicación desta porcentaxe será necesaria unha nota media de 5 puntos, entre as dúas prácticas especiales. Para facer a media débense aprobar ambas prácticas con ao menos un 5.	55
Workshop	A2 A6 B1 B3 B4 B5 B7 B8 B16 B27 C1 C3 C4 C5 C6 C7 C8	A avaliación das prácticas feitas nas aulas, será ao longo do cuatrimestre. Avaliarase o traballo feito polo alumnado e os coñecementos adquiridos.  Debido ao carácter fundamentalmente práctico da materia, requirese unha porcentaxe do 90% de prácticas entregadas en data, atendendo ao calendario académico.  No caso de non poder asistir de maneira xustificada, o alumnado poderá entregar o traballo na semana seguinte, sendo a súa valoración do 50% da nota.  A porcentaxe sobre da nota final será do 45%.	45

#### Assessment comments

NOTA: A AVALIACIÓN SERÁ CONTINUA AO LONGO DO CUADRIMESTRE. A MATERIA

APROBARASE POR CURSO, TENDO SUPERADAS AS PARTES QUE FORMAN A NOTA FINAL =

[Taller 45% + Proba obxectiva (media de as dúas prácticas especiales)

55%]. PARA PODER PRESENTARSE Á SEGUNDA OPORTUNIDADE, O

ALUMNADO DEBE CUMPRIR OS MESMOS CRITERIOS ESIXIDOS NA PRIMEIRA

OPORTUNIDADE. QUEDA EXCLUIDO O ALUMNADO QUE NON CUMPRA DITAS CONDICIÓNS.

**Recommendations****Subjects that it is recommended to have taken before**

Descriptive Geometry [In extinction]/670G01004

Architectural Graphic Expression I [In extinction]/670G01008

**Subjects that are recommended to be taken simultaneously**

Architectural Graphic Expression II/670G01013

**Subjects that continue the syllabus****Other comments**

In order to approach the fundamentals of graphic representation, it is recommended to take the subject of Geometry of the Representation in a previous or simultaneous way to the rest of subjects of the Area of Expression Architectonic Graphic. PREREQUISITES. It is recommended to have taken the subject of Descriptive Geometry in First Course
