| Study programme competences | |
|-----------------------------|--|
| Code | Study programme competences |
| A2 | Adquirir os coñecementos fundamentais sobre os sistemas e aplicacións informáticas específicos e xerais utilizados no ámbito da edificación. |
| A8 | Deseñar, calcular e executar estruturas de edificación. |
| A29 | Elaborar estudos, certificados, ditames, documentos e informes técnicos. |
| B1 | Capacidade de análise e síntese. |
| B2 | Capacidade de organización e planificación. |
| B3 | Capacidade para a procura, análise, selección, utilización e xestión da información. |
| B4 | Coñecementos de informática relativos ao ámbito de estudio. |
| B5 | Capacidade para a resolución de problemas. |
| B6 | Capacidade para a toma de decisións. |

| | |
|-----|--|
| B8 | Capacidade para traballar nun equipo de carácter interdisciplinario. |
| B16 | Capacidade de aplicar os coñecementos na práctica. |
| B29 | Actitude vital positiva fronte ás innovacións sociais e tecnolóxicas. |
| C1 | Adequate oral and written expression in the official languages. |
| C3 | Using ICT in working contexts and lifelong learning. |
| C5 | Understanding the importance of entrepreneurial culture and the useful means for enterprising people. |
| C6 | Acquiring skills for healthy lifestyles, and healthy habits and routines. |
| C7 | Developing the ability to work in interdisciplinary or transdisciplinary teams in order to offer proposals that can contribute to a sustainable environmental, economic, political and social development. |
| C8 | Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society. |

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies | |
|--------------------------------|--|
| Methodologies | Description |
| Guest lecture / keynote speech | An important part of the in-person class will be developed basically through an expository method. Nevertheless the student will be involved in the class during the development stage of the topic exposed, as far as it is possible. With this method the student will be given the chance to ask questions and to express his ideas, conducting the pupil to the learning process. Audio-visual and technological media will support the explanation. |
| Problem solving | Practical tests to verify the student knowledge are a significantly important part in this subject. Even though on their own practical tests do not conduct to the knowledge of the topics, they allow the consolidation and clarification of the concepts acquired in the previous master classes. The professor, by the students or in an intermediate way, could hold its resolution. For the students enrolled in the ?International Semester? this part of the subject will be evaluated through the guided work developed in the workshop based on a project methodology. |

| | |
|---------------------------------|--|
| Supervised projects | <p>The student will develop a variety of works during the course with the assistance of the professor. The students will have do and hand over the works in correspondence with the particular rules that will be established for each one of the proposed topics.</p> <p>For the students enrolled in the ?International Semester? this part of the subject will be evaluated through the guided work developed in the workshop based on a project methodology.</p> |
| Mixed objective/subjective test | <p>There will be written tests with the aim of evaluating the knowledge level and competences acquired by the student. For that purpose the tests will evaluate the theoretical contents comprehension and the practical skills acquired.</p> |
