General description	The objective of this course is to teach the basic concepts of the architecture of the polymer chains, the fundamental aspects of the properties of polymer solutions, interactions and relationship with the chemical structure. It also provides an overview of the theory and experimental techniques of radiation scattering (light, X, neutrons), the analysis and interpretation of data relating to the characterization of polymeric materials.				
Contingency plan	<p>1. Modifications to the contents The contents are not modified</p> <p>2. Methodologies *Teaching methodologies that are maintained Guest lecture/keynote speech (via Teams) Supervised projects (tutored via Teams or email)</p> <p>*Teaching methodologies that are modified Laboratory practice. It is replaced by the presentation of practical cases in the Keynote sessions and the reading and discussion of scientific articles (analysis of documentary sources).</p> <p>3. Mechanisms for personalized attention to students - Email: Daily. Used to make queries, request virtual meetings to resolve doubts and monitor the work being supervised. - Microsoft Teams: Personalized tutoring of students - Moodle: This will be used as a repository for documentation provided to students.</p> <p>4. Modifications in the evaluation Keynote Sessions 60% Supervised projects 30% Analysis of documentary sources 10%</p> <p>*Evaluation observations: -</p> <p>5. Modifications to the bibliography or webgraphy No change.</p>				

Study programme competences / results

Code	Study programme competences / results
A1	Set up and conduct tests using the techniques of thermal analysis and rheology most appropriate in each case, within the scope of complex materials

A2	Identify and evaluate the different types of complex materials
A5	Understanding the relationships between structure and properties of materials
B1	Knowledge and understanding to provide a basis or opportunity for originality in developing and / or applying ideas, often in a research context
B2	The students have the skill to apply their knowledge and their ability to solve problems in new or unfamiliar contexts within broader (or multidisciplinary) contexts related to their field of study
B4	That the students can communicate their conclusions and the knowledge and last reasons behind that conclusions to specialized and non specialized audience in a clear and unambiguous way
B8	Applying a critical, logical and creative way of thinking
B13	Analysis-oriented attitude
B17	Analyze and decompose processes
B21	To assess the importance of research, innovation and technological developments in the socio-economic and cultural progress of society
C2	Have a good command of spoken and writing expression and understanding of a foreign language.
C6	Critically assessing the knowledge, technology and information available to solve the problems they face with.
C7	To assume as a professional and citizen the importance of learning throughout life.
C8	To assess the importance of research, innovation and technological development in the socio-economic and cultural progress of society.

Learning outcomes				
Learning outcomes		Study programme competences / results		
<p>The course offers an advanced polymer and soft matter physics and physical chemistry study: rationale and methods. The aim is to teach students the basics of architecture of the polymer chains, basic aspects of the properties of polymer solutions, interactions and relationship with the chemical structure, including phase behavior. It also aims to provide perspective on the experimental scattering techniques, analysis and interpretation of data relating to the characterization of materials. An introduction to the theory of diffraction and instrumentation is offered. In addition, selected examples of polymeric materials with a view to developing the experience and knowledge of practical aspects will be presented.</p>		AR1	BR1	CR2
		AR2	BR2	CR6
		AR5	BR4	CR7
			BR8	CR8
			BR13	
			BR17	
	BR21			

Contents	
Topic	Sub-topic
1. Formation of single stranded (ideal chains, real chains)	Cadeas ideais Cadeas reais
2. mixing Thermodynamics	
3. polymer solutions (good solvents, theta solvents, poor solvents)	
4. Red and gelling	
5. Dynamic: dynamic cross-linked polymers and non-interlaced.	
6. dispersive techniques (light scattering, X-ray and neutron) STRUCTURAL	
7. Factores shape and factors	
8. Polymers and polymer systems: an example of analyzes and studies.	

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
Guest lecture / keynote speech	A2 A5 B1 B13 B21 C7	15	15	30

Laboratory practice	A1 B2 B4 B8 B17	15	5	20
Supervised projects	B13 B21 C2 C6 C8	3	20	23
Personalized attention		2	0	2

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Presentation given by the professor, on a schematic basis, focusing on the main topics, covering both theoretical and practical issues.
Laboratory practice	Performance of practical activities such as demonstrations, exercises, experiments, etc..
Supervised projects	Activities whose purpose is that the students enlarge the study of the topics presented in the program and consolidate their acquired knowledge and capabilities. These activities should also help the students learn and improve their capabilities in literature survey.

Personalized attention	
Methodologies	Description
Supervised projects	The personalized attention to students, understood as a support in the teaching-learning process, will take place in the hours of tutoring of the professor. No academic dispensation is accepted.

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Guest lecture / keynote speech	A2 A5 B1 B13 B21 C7	Examination or objective test.	50
Laboratory practice	A1 B2 B4 B8 B17	Continuous assessment through monitoring of student work in the classroom, laboratory and / or tutorials.	20
Supervised projects	B13 B21 C2 C6 C8	Presentation (oral and written) of the supervised work.	30

Subjects that continue the syllabus
Other comments

To help achieve a sustained immediate environment and meet the objective of action number 5: "Healthy and sustainable environmental and social teaching and research" of the "Green Campus Ferrol Action Plan: The delivery of the documentary work carried out in this subject: They will be requested in virtual format and/or computer support. It will be done through Moodle, in digital format without the need to print them. If it is necessary to make them on paper: Plastics shall not be used. Double-sided printing shall be carried out. Recycled paper will be used. Printing of drafts shall be avoided. - A sustainable use of resources and the prevention of negative impacts on the natural environment must be made. - It will work to identify and change gender biases and attitudes, and influence the environment to change them and promote values of respect and equality. - Situations of discrimination should be identified and actions and measures proposed to correct them.
