

Teaching Guide

Teaching Guide				
Identifying Data				2020/21
Subject (*)	Efficiency of Electric Systems		Code	770523013
Study programme	Mestrado Universitario en Eficiencia e Aproveitamento Enerxético			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	2nd four-month period	First	Optional	3
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Enxeñaría Industrial			
Coordinador	Graña Lopez, Manuel angel	E-mail	manuel.grana@udc.es	
Lecturers	Graña Lopez, Manuel angel	E-mail	manuel.grana@udc.es	
Web	moodle.udc.es			
General description	To achieve that the electrical installations and the receptors that constitute them, work of a correct way and that work of an efficient way from an electrical point of view, have to firstly identify and afterwards quantify of a correct way the ineficiencias that can find us presents in any electrical system, such as the desfases between the tension and the current, the fault of symmetry and the fault of linealidad in his circuits, once established these ineficiencias, showed the devices that allow us correct them, so that it attain an improvement in the efficiency of the installation or circuit.			
Contingency plan	<p>1. Changes in content</p> <p>The contents are not modified.</p> <p>2. Methodologies</p> <p>* Teaching methodologies that are maintained.</p> <p>All teaching methodologies are maintained, modifying only their face-to-face character, except those discussed in the following section</p> <p>* Teaching methodologies that are modified</p> <p>The laboratory practices will preferably be done in person, modifying, if necessary, their planning to adapt it to the face-to-face periods. If it is not possible to complete them in this way, they will be replaced by other activities or, if not possible, they will be canceled.</p> <p>The objective test, if it cannot be attended, will be done through work.</p> <p>3. Mechanisms for personalized attention to students</p> <p>Students will be served through institutional channels, moodle, teams, email and telephone assistance. The hours established for the tutorials will be maintained and will be attended, through any of the aforementioned channels, upon individual or group request of the student outside of these hours.</p> <p>4. Modifications in the evaluation</p> <p>It is not modified.</p> <p>* Evaluation observations:</p> <p>5. Modifications of the bibliography or webgraphy</p> <p>It is not modified.</p>			

Study programme competences

Code	Study programme competences
------	-----------------------------

A1	Análise e aplicación de metodoloxías e normativa para unha xestión eficiente da enerxía.
B3	Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación.
B6	Buscar y seleccionar alternativas considerando las mejores soluciones posibles.
B7	Desarrollar las capacidades de análisis y síntesis; fomentar la discusión crítica, la defensa de argumentos y la toma de conclusiones.
B11	Adquirir nuevos conocimientos y capacidades relacionados con el ámbito profesional del máster.
B15	Conocer la legislación vigente y reglamentación aplicable al sector de las energías renovables y de la eficiencia energética.
C3	Aplicar una metodología que fomente el aprendizaje y el trabajo autónomo.

Learning outcomes			
Learning outcomes		Study programme competences	
The student will know to identify the diverse phenomena (reactive, disequilibriums, harmonic), that can find in an electrical installation, that diminish his efficiency.		AJ1	BC3 BC11 BC15
The student will know to quantify the importance of the ineficiencias of the system and proceed to pose the best solution for the same, so that the system was from the electrical point of view more efficient, all this attending to the norms and reglamentación valid.		AJ1	BC6 BC7 CC3

Contents	
Topic	Sub-topic
Introduction to the ineficiencias in the electrical systems.	Introduction. The Unified Theory of Electrical Power.
Compensation of the reactive power.	Introduction. Characterisation and measure of the reactive energy. Devices of compensation of the cos fi.
Balanced three- and four-wire electrical systems.	Introducción. Theorem of Stokvis-Fortescue. Characterization and measurement of power imbalances Equivalent circuits of receptors and installations. Elimination of imbalances. Filters of sequence.
Non linear loads.	Introduction. Origin of non-sinusoidal periodic waves. Factors periodic signals. Limits of harmonics. Distortion power.
Correction disturbances.	Introduction. UNE-EN-61642. Filters of harmonic. Filters of Rejection. Filters of Absorption.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Objective test	A1	3	12	15
Laboratory practice	B6 B15	12	6	18
Supervised projects	B3 C3	0	12	12
Guest lecture / keynote speech	B7 B11	9	18	27
Personalized attention		3	0	3

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Objective test	Proof of evaluation where the student will have to show his degree of learning of an objective way.
Laboratory practice	You practise them of laboratory are a fundamental activity for the learning of this matter. They consist in practical suppositions where the student will have to show the theoretical knowledges purchased
Supervised projects	They develop tasks, that allow to settle the theoretical and practical knowledges, that can go from formulating problems and brief works the simple until others with some complexity.
Guest lecture / keynote speech	Face-to-face activity in the classroom, where will establish the fundamental concepts of the matter. It will realise by means of an oral exhibition, complemented with audiovisual and multimedia means, is whose end transmit the knowledges and facilitate the learning.

Personalized attention

Methodologies	Description
Supervised projects Guest lecture / keynote speech Laboratory practice	They realise in the corresponding tutorías, where to initiative of the student resolve, or clear the possible doubts.

Assessment

Methodologies	Competencies	Description	Qualification
Supervised projects	B3 C3	Will be able to realise to varied cape works tutelados along the course, being his compulsory delivery and that treated on problems or practical suppositions related with the matter. The works tutelados, are 30% of the final note of the matter, that will be added to the note obtained in the objective proof, whenever this was described with at least 3.0 points on 10.0 points.	30
Objective test	A1	In the dates fixed officially by the centre, realised this final proof. The proof can alternate ask type problem or theoretical questions, and represents 40% of the final note of the matter.	40
Laboratory practice	B6 B15	The practical are compulsory, and is necessary to have them realised to be able to surpass the asignatura. The practices represent 30% of the final note of the matter, and added to the note obtained in the theoretical proof whenever this was upper to 3.0 points on 10.0 points.	30

Assessment comments

All the activities that contribute to the final note of the student, will be qualified on 10.0 points.
