Lecturers	Calvo Garrido, María Del Carmen	E-mail	carmen.calvo.garrido@udc.es			
Web	moodle.udc.es					
General description	Differential Equations and their resolution methods are basic tools for the description and study of simpler mathematical models governing many physical phenomena: fluid mechanics, electromagnetism, thermodynamics. Throughout this subject an introduction to the study of differential equations will be performed (first and high order) and different analytical and numerical methods will be studied. Furthermore, basic notions of partial derivative equations and calculus in complex variable will be described.

Study programme competences	
Code	Study programme competences
A6	Capacidade para a resolución dos problemas matemáticos que se poidan suscitar na enxeñaría. Aptitude para aplicar os coñecementos sobre: álgebra lineal; xeometría; xeometría diferencial; cálculo diferencial e integral; ecuacións diferenciais e en derivadas parciais; métodos numéricos; algorítmica numérica; estatística e optimización.
B1	Capacidade de resolver problemas con iniciativa, toma de decisións, creatividade e razonamento crítico.
B2	Capacidade de comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial.
B3	Capacidade de traballar nun contorno multilingüe e multidisciplinar.
B4	Capacidade de traballar e aprender de forma autónoma e con iniciativa.
B6	Capacidade de usar adecuadamente os recursos de información e aplicar as tecnoloxías da información e as comunicacións na enxeñaría.
C1	Expresarse correctamente, tanto de forma oral coma escrita, nas linguas oficiais da comunidade autónoma.
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrentarse.

Learning outcomes			
Learning outcomes			Study programme competences
To be able to write the mathematical models governing simple physical phenomena in terms of differential equations.	A6	B1 B2 B4	C1
To understand the basic characteristics of differential equations: classify them and their solving particularities.	A6	B1 B2 B4	C1
To know and be able to apply the several analytic methods for solving ordinary differential equations (either first order or higher order).	A6	B1 B2 B4	C1
To understand and be able to apply Laplace transform to solve systems of ordinary differential equations and initial value problems.	A6	B1 B4	C1
To understand and be able to apply Fourier and Z-transform to solve linear ordinary differential equations.	A6	B1 B2 B4	C1
To understand and be able to apply simple numerical methods to approximate the solution of differential equations.	A6	B1 B2 B3 B4	C1
To understand basic notions of partial differential equations and complex analysis and its relation with the mathematical models governing physical phenomena in two and three dimensional spaces.	A6	B1 B2 B3 B4	C1
To be able to use the course literature and the IT tools available to find the information required to solve a particular problem.		B3 B4 B6	C3 C6

Contents	
Topic	Sub-topic
First Order ODE	Tema 1: Motivación Terminología básica: orden, tipo e linearidad Solución general e solución particular Existencia e unicidad de solución para un problema de valor inicial de primera orden Algunas EDOs que gobernan fenómenos físicos en la Ingeniería. Tema 2: Ecuaciones en variables separadas Ecuaciones exactas. Factor integrante Ecuaciones lineales Aplicaciones de las EDOs de primera orden Tema 3: Métodos numéricos de integración: problema de valor inicial. Motivación. Xeneralidades Resolución numérica de un problema de valor inicial de primera orden Métodos de Euler y Runge-Kutta
Higher order ODE	Tema 4: Ecuaciones lineales de segunda orden Ecuaciones lineales homogéneas con coeficientes constantes Solución general Ecuaciones lineales no homogéneas con coeficientes constantes Ecuaciones lineales de orden superior. Aplicaciones.

Laplace Transform	Tema 5: Definición da transformada de Laplace Cálculo e propiedades da transformada de Laplace Transformada inversa de Laplace Aplicación á resolución de sistemas lineais de ecuacións diferenciais Aplicacións na Enxeñaría Eléctrica
ODE linear systems	Tema 6: Sistemas de ecuacións diferenciais lineais de primeira orde Estructura dos conxuntos de solucións Wronskiano dun conxunto de funcións Resolución de sistemas homoxéneos con coeficientes constantes
Series de Fourier	Tema 7: Definición das series de Fourier Cálculo e propiedades das series de Fourier Aplicacións á resolución de EDOs de orde superior
Fourier series and Z-transform	Tema 8: Definición da transformada Z Cálculo e propiedades da transformada Z Transformada Z inversa Aplicacións á resolución de EDOs de orde superior

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	B2 B3 B4 C1	21	31.5	52.5
Laboratory practice	A6 B1 B3 B4 B6 C3	9	9	18
Mixed objective/subjective test	A6 B1 B3 B4 B6 C3 C6	8	8	16
Problem solving	A6 B2 C3 C6	21	31.5	52.5
Personalized attention		11	0	11

(\*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Presentation of the subject contents. The aim of the sessions is to provide the student with the basic knowledge to allow him to explore the subject as autonomously as possible. Examples of applications are developed and related activities are proposed.
Laboratory practice	Interactive practice where computer programs are used to solve problems commented in the lectures.
Mixed objective/subjective test	Written test may consist of an explanation of any content of the course, the answer of test questions, the resolution of theoretical and practical issues and developing solutions to issues involving deep knowledge of the subject. They are useful to determine the degree of knowledge that students get at classes and with their personal study.
Problem solving	Técnica mediante a que se ten que resolver unha situación problemática concreta, a partir dos coñecementos que se traballaron, que pode ter máis dunha posible solución.

Personalized attention	
Methodologies	Description

Laboratory practice	a) The diversity of students and their training makes advisable to provide personalized guidance, which could be carried out in the framework of a tutorial action b) In computer practice, teachers will help students in the development of the problems identified in the practical sessions, both in the management of the computer program Matlab / Octave and the understanding of the theoretical and practical aspects of differential equations c) During the seminars, teachers will make a more detailed monitoring of students in the learning process by solving theoretical questions, problem solving and applications to simple problems in the field of Electronic Engineering.
---------------------	--

Assessment				
Methodologies	Competencies	Description		Qualification
Laboratory practice	A6 B1 B3 B4 B6 C3	Solving practical problems and illustration of theoretical aspects with the help of the computer program Matlab/Octave		10
Mixed objective/subjective test	A6 B1 B3 B4 B6 C3 C6	Written test including the resolution of problems and short questions (related to theoretical and practical subjects)		70
Problem solving	A6 B2 C3 C6	Técnica mediante a que se ten que resolver unha situación problemática concreta, a partir dos coñecementos que se traballaron, que pode ter máis dunha posible solución.		20
