eneral description	The course provides basics of Orga	anic Chemistr	y for students of	Chemistry		
	The course provides basics of Organic Chemistry for students of Chemistry 1. Modifications to the contents: without changes 2. Methodologies *Teaching methodologies that are maintained: all (lectures, seminars, workshops and practices) *Teaching methodologies that are modified: All the methodologies are adapted to the virtual modality through Moodle and Teams and the planning established in the coordination calendar of the Center is maintained. Specifically, the mixed objective test will consist of an individual manuscript exam, performed asynchronously through Moodle. In the case that the coordination with the rest of the subjects allows it, the possibility of fragmenting the mixed objective test into several tests carried out throughout the teaching period is contemplated. 3. Mechanisms for personalized attention to students: The personalized attention will be carried out through email or the Moodle platform at the request of the students and, as far as possible, at the time established for the tutorials. For students with part-time dedication or specific learning modalities or diversity support, personalized attention will be provided within the flexibility allowed by coordination schedules, and material and human resources. 4. Modifications in the evaluation: without changes, contributions to the final marks of all evaluable methodologies are maintained. *Evaluation observations: all the observations included in the teaching guide are maintained.					

	Study programme competences / results				
Code	Study programme competences / results				
A1	A1 Ability to use chemistry terminology, nomenclature, conventions and units				
A4	Knowledge of main types of chemical reaction and characteristics of each				
A6	Knowledge of chemical elements and their compounds, synthesis, structure, properties and reactivity				
A9	Knowledge of structural characteristics of chemical and stereochemical compounds, and basic methods of structural analysis and				
	research				
A10	Knowledge of chemical kinetics, catalysis and reaction mechanisms				
A14	Ability to demonstrate knowledge and understanding of concepts, principles and theories in chemistry				
A15	Ability to recognise and analyse new problems and develop solution strategies				

A21	Understanding of qualitative and quantitative aspects of chemical problems	
B2 Effective problem solving		
B3	Application of logical, critical, creative thinking	
B4 Working independently on own initiative		
C1	Ability to express oneself accurately in the official languages of Galicia (oral and in written)	
C3	Ability to use basic information and communications technology (ICT) tools for professional purposes and learning throughout life	

Learning outcomes			
Learning outcomes	Study	y progra	amme
	con	npetenc	es/
		results	
Understand and know basic concepts, principles and theories related to Organic Chemistry	A1	B2	C1
	A4	B3	
	A6	B4	
	A9		
	A10		
	A14		
	A15		
	A21		
Use Organic Chemistry terminology, including nomenclature, main conventions, and units	A1	B2	C1
	A6	B3	C3
	A9		
	A14		
Know the caracteristics and propierties of organic compounds.	A1	B2	
	A9	B3	
	A14		
	A21		
Adquire the ability to solve estructural and synthetic problems in Organic Chemistry through the analysis of the present	A1	B2	C3
functional groups and the application of the acquired knowledge regarding their properties and reactivity	A4	B3	
	A9	B4	
	A14		
	A15		
	A21		
Know the main types of organic reactions, their mechanistic pathways and their main stereochemical features.	A1	B2	C1
	A4	B3	C3
	A6	B4	
	A9		
	A10		
	A21		
Acquire the ability to use literature, as well as to search for specific information in Organic Chemistry	A6	B3	C1
	A9	B4	C3
	A14		

Contents		
Topic Sub-topic		
Unit 1. Structure and reactions of organic compounds	Characteristics, structure and bonding of organic compounds: functional groups, Lewis structures, hybrid atomic orbitals, resonance. Organic Reactions: classification, types	
	of reagents, types of reaction mechanisms. Thermodynamic and kinetic features of	
	organic reactions. Kinetic and thermodynamic control. Reaction intermediates.	

Unit 2. Stereoisomerism	Nomenclature, properties and isomerism of alkanes. Constitutional isomerism and
	stereoisomerism. Conformational isomerism: conformational analysis of alkanes and
	cycloalkanes, Newman projections. Optical isomerism, chirality and symmetry.
	Enantiomers and diastereoisomers: nomenclature, Fischer projections. Resolution of
	racemic mixtures.
Unit 3. NMR Spectroscopy	Basic principles of the NMR. Most important nuclei in Organic Chemistry. Chemical
	shift, Spin-spin coupling: N+1 rule. Identification of functional groups by NMR.
Unit 4. Alkanes	Halogenation, pyrolysis, cracking, combustion.
Unit 5. Alkyl Halides	Nomenclature, structure and properties. Nucleophilic substition reactions (SN): factors
	determinig the mechanism of nucleophilic substitutions: substrate (structure of the
	alkyl group and nature of the leaving group), nucleophilicity of the reagent and solvent
	effects. Elimination reactions. Competitive proccesses in the SN reaction:
	transpositions and eliminations. Organometallic compounds. Reduction of alkyl
	halides.
Unit 6. Alcohols	Nomenclature, structure and properties. Acid-base behavior. O-H bond reactions. C-O
	bond reactions. Oxidation. Thiols.
Unit 7. Ethers	Nomenclature, structure and properties. Ether cleavage. Epoxides. Thioethers.
Unit 8. Amines	Nomenclature, structure and properties. Acid-base reactions. Alkylation of amines.
	Hofmann's elimination. Oxidation: Cope's elimination.

	Planning	g		
Methodologies / tests	Competencies /	Competencies / Teaching hours		Total hours
	Results	(in-person & virtual)	work hours	
Guest lecture / keynote speech	A1 A4 A6 A9 A10	20	30	50
Seminar	A1 A4 A6 A9 A10	10	25	35
Workshop	A1 A4 A6 A9 A10 B2	10	30	40
	B4 C1			
ICT practicals	A6 A9 A21 B2 B4 C3	10	10	20
Mixed objective/subjective test	A1 A4 A6 A9 A10 A14	4	0	4
	A15 A21 B2 B3 C1			
Personalized attention		1	0	1

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies			
Methodologies	Methodologies Description			
Guest lecture /	The teacher will present the fundamental contents of each unit. The slides will be available in Moodle before the class. With			
keynote speech	the help of these materials and other bibliographic resources, students must prepare the lessons before the lectures. The			
	participation of the students will be encouraged during the lectures (or before/after the class by e-mail).			
Seminar	Sessions dedicated to solving problems and questions with an active participation of the student. Problems to be solved will be			
	available on Moodle before the seminars. Students must work on the problems before the seminars.			
Workshop	The workshops are work sessions organized in small groups. The teacher will assign the students the preparation of some			
	problems, which may require the integration of contents from different units. Students must prepare and hand in solutions for			
	the assigned problems before the workshops through Moodle. During the workshop sessions the students will present the			
	problems and answer the questions that arise.			
ICT practicals	Two practicals will be carried out, oriented to the use of computer tools for: (1) the analysis and resolution of stereochemistry			
	problems and (2) the structural determination of organic compounds based on the analysis of 1H NMR spectra. Students must			
	prepare and hand in (through Moodle) a report of each one of the practicals.			

Mixed	In order to evaluate the knowledge and the ability to apply the subject contents by the student, a mixed test is scheduled. The
objective/subjective	test will include questions and problems analogous to those solved in the seminar and workshop sessions during the course,
test	related to nomenclature, structure, structural determination, reactivity and synthesis of organic compounds.

Personalized attention				
Methodologies	Description			
ICT practicals	Students will have the help of the teacher (during the tutorials schedule) for the resolution of doubts and questions that may			
Workshop	arise during the study of the contents, the elaboration of solutions to the problems to be exposed in the workshops or the			
	preparation of the practical reports. The monitoring will be done, as far as possible, in person or virtually through email or			
	Moodle.			
For students with part-time dedication or specific learning modalities or diversity support, personalized attention w				
	provided within the flexibility allowed by the coordination schedules and material and human resources.			

		Assessment	
Methodologies	Competencies /	Competencies / Description	
	Results		
Mixed	A1 A4 A6 A9 A10 A14	It will take place during the official examination period, on the dates established by the	60
objective/subjective	A15 A21 B2 B3 C1	Center. The test will consist of a written exercise with problems and questions	
test		analogous to those solved in the seminars, workshops and practicals.	
ICT practicals	A6 A9 A21 B2 B4 C3	The participation in the practicals will contribute with a 5% to the assessment. The practical reports handed in through Moodle will contribute with a 10% to the	15
Workshop		assessment.	25
Workshop	A1 A4 A6 A9 A10 B2 B4 C1	(1) the reports handed in through Moodle, (2) the attendance and participation through questions or answers during the sessions and (3) the quality of the presentations of the problems will be evaluated, taking into account the use of the appropriate nomenclature for the compounds and reactions, the clarity and specificity of the explanations and the answers to the questions that arise.	25

Assessment comments

The attendance to the practicals is a requirement to pass the subject. In order to pass the subject, it will be necessary to obtain a grade of 5 or higher (out of 10) in the mixed test. Therefore, if the minimum score is not reached in the mixed test, the student will receive a failing grade, even if the average grade is equal to or greater than 5 (in which case the grade will be 4.5). Students who have not completed the practices and do not attend to the mixed test will receive the grade of Non Presented.

The qualifications of the ITC practicals and the workshops will be maintained in the second opportunity. Therefore, in the second opportunity, students can only take a mixed test, which grade will replace the one obtained in the mixed test of the first opportunity. The students evaluated in the second opportunity will only be able to obtain the grade "with Honors" if the maximum number of these for the corresponding course has not been fully covered in the first opportunity.

Students with recognition of part-time dedication will be evaluated with the criteria set forth above.

Students with academic exemption are exempt from attending the workshops (25% of the global grade) and may be evaluated only by the ITC practicals and the mixed test, both in the first and in the second opportunity. For students who qualify for the workshop attendance waiver, the mixed test will contribute 85% of the overall grade. The attendance to the ITC practicals is a requirement to pass the subject and will be facilitated as far as possible, within the flexibility allowed by the coordination schedules and material and human resources. In the case of exceptional, objective and properly justified circumstances, the QO1 coordinator could exempt a student from the continuous evaluation of the practicals. The student under in this circumstance must pass a specific exam that leaves no doubt about the achievement of knowledge, skills and competencies of the subject (corresponding to 100% of the grade).

Other comments
We highly recommend as main sources of information the books: Wade 2012 and Vollhardt, 2007. We also recommend the reading of the main
subjects of each topic, as preparation to the teacher's keynote lectures.
