General description	This course provides the basic knowledge for the student to start using various digital graphic tools in buildings.				
	In combination with the subjects Architectural Graphic Expression I and Descriptive and Representation Geometry, it is				
	intended to work productively on the graphic representation of building elements.				
	This course focuses on optimal an	d effective rep	presentation using t	he digital graphic tools	s used in the professional field.

Contingency plan	NON-ATTENDANCE TEACHING METHOD ACTIONS COVID-19
	1. Modifications to the contents
	No changes will be made.
	2. Methodologies
	*Teaching methodologies that are maintained
	The methodologies proposed in the guide will be adapted to the new situation of exceptionality through the use of the
	institutional telematic tools for teamwork available for conducting online seminars, as well as the use of the Moodle platform
	(Virtual Campus) and the use of the email.
	*Teaching methodologies that are modified
	Lectures are replaced by online seminars (Microsoft Teams) with a more flexible and dynamic format with the possibility of
	student participation and resolution of doubts. This teaching will be adapted to the new situation of exceptionality through
	the use of the Moodle platform (Virtual Campus) and the use of e-mail. The follow-up and review of the supervised work of
	the subject will be carried out through some telematic teamwork platform (Teams) organizing the activity in combination
	with the Moodle platform of the subject (Virtual Campus) and the UDC e-mail.
	3. Mechanisms for personalized attention to students
	Personalized attention will preferably be provided via the ODC e-mail, although the available institutional telematics tools
	tor teamwork may also be used. All the information on the subject in this period of non-contact teaching (activities,
	delivenes, evaluation, tutonal attention,) will be done through the Moodle platform of the subject (virtual campus) so it is
	4. Modifications in the evaluation
	Methodology: Tutored works. Rating weight: 100%.
	Description: Preparation of tutored practical works related to the contents of the subject.
	* Evaluation observations:
	The teaching of the Digital Graphic Tools for Building subject is based on an active learning methodology that includes
	pedagogical approaches such as Project Based Learning and Problem Based Learning, through a continuous evaluation
	system and with the obligation of active participation by the students.
	Each task / practical work will be carried out individually and those works that reach a minimum score of 5 out of 10 will be
	considered FIT. To pass the subject, it is necessary to correctly carry out ALL the proposed works as well as to properly
	follow them in the practical class (workshop) and tutorials.
	In addition to the attendance participation and completion of tasks / assignments, the tests deemed necessary may be
	carried out in order to adequately assess the degree of assimilation of the conceptual and procedural contents of the
	subject.
	To pass the course PER COURSE, the student must deliver ALL the works proposed in the manner and term indicated at
	the beginning of the teaching period and each of the works must have been qualified as PASSED.
	Students who do not pass the subject per course must deliver the corresponding works on the date set for the First
	Assessment Opportunity (MAY / JUNE) or, where appropriate, on the date set for the Second Assessment Opportunity
	(JULY). In these deliveries, the corresponding indications of the teachers responsible for the subject must be followed
	MANDATORYLY.

In order to be evaluated in the First and Second Opportunities, it is considered MANDATORY to have followed up the work

to be delivered, being the responsibility of the student the active participation in the tutorials.

IMPORTANT: The student who does not deliver any of the proposed works in time and form will have the condition of NOT PRESENTED. It will not be allowed to complete or modify the works outside the indicated delivery dates.

The practices will be delivered electronically via the subject's Moodle platform (Virtual Campus). In these deliveries, the corresponding indications of the teachers responsible for the subject must be followed MANDATORYLY.

## 5. Modifications to the bibliography or webgraphy

The sources of basic and complementary information reflected in the teaching guide are maintained as students have at their disposal both on the Moodle platform of the subject (virtual campus) and on the web (online resources) all the necessary and sufficient documentation to the adequate study of the contents of the subject.

	Study programme competences / results
Code	Study programme competences / results
A38	A0.3 Ability to use spatial representation systems, sketching, dimensioning, and graphical representation language and techniques for
	building elements and processes.
A45	A1.2 Understanding of architectural infographics and construction mapping methods and techniques.
B1	Capacidade de análise e síntese.
B3	Capacidade para a procura, análise, selección, utilización e xestión da información.
B4	Coñecementos de informática relativos ao ámbito de estudo.
B5	Capacidade para a resolución de problemas.
B12	Razoamento crítico.
B14	Aprendizaxe autónomo.
B16	Capacidade de aplicar os coñecementos na práctica.
B25	Hábito de estudo e método de traballo.
B27	Capacidade de comunicación a través da palabra e da imaxe.
B31	B1 Students will demonstrate knowledge and understanding of subjects that build upon the foundation of a general secondary education
	using advanced textbooks and ideas and analyses from the cutting edge of their field.
B32	B2 Students will be able to use their knowledge professionally and will possess the skills required to formulate and defend arguments and
	solve problems within their area of study.
B33	B3 Students will have the ability to gather and interpret relevant data (especially within their field of study) in order to make decisions and
	reflect on social, scientific and ethical matters.
B34	B4 Students will be able to communicate information, ideas, problems and solutions to specialist and non-specialist audiences alike.
B35	B5 Students will develop the learning skills and autonomy they need to continue their studies at postgraduate level.
C1	Adequate oral and written expression in the official languages.
C3	Using ICT in working contexts and lifelong learning.
C4	Acting as a respectful citizen according to democratic cultures and human rights and with a gender perspective.
C6	Acquiring skills for healthy lifestyles, and healthy habits and routines.
C7	Developing the ability to work in interdisciplinary or transdisciplinary teams in order to offer proposals that can contribute to a sustainable
	environmental, economic, political and social development.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Methodologies				
Methodologies	Description			
Guest lecture /	The teacher gives an educational talk to the students concerning the course contents, supported by audiovisual media. Also,			
keynote speech	issues are debated with the students in order to facilitate learning. This methodology may be complemented with other types			
	of training activities such as conferences, presentations, talks, visits, etc.			
Problem solving	Students must solve a specific problem situation based on the knowledge that has been worked on, which may have more			
	than one possible solution.			
ICT practicals	Students will carry out practices in which their knowledge of digital graphic tools will be demonstrated.			
Workshop	This methodology is based on interactive teaching, a pedagogical model focused on applying the theoretical content. The			
	workshop can encompass various methodologies such as exhibitions, simulations, debates, problem solving, guided practices,			
	etc., that guide the student's work on a certain subject, with the support and supervision of the teaching staff.			
Supervised projects	This methodology aims to promote the autonomous learning of students under the support of teachers in both academic and			
	professional settings. It refers to learning "how to do things", and in which the student assumes responsibility for			
	their training.			
Student portfolio	It consists of the collection of data that the student prepares from the theoretical sessions (expository) and from his personal			
	reflections on the proposed work: graphic data, images, drawings, bibliographic references, technical documentation and			
	notes related to the development of each one of the proposed exercises.			
Objective test	Tests deemed necessary may be carried out in order to adequately assess the degree of assimilation of the conceptual and			
	procedural content of the course. These tests may have a varied format and adapted to the specific characteristics of the			
	contents.			
Document analysis	The student will analyze documentary sources related to the proposed topic through the use of audiovisual, bibliographic			
	documents, documentary reports, graphic panels, photographs, models, papers, informative texts, regulations, etc. Individually			
	or in workshop groups, the available documentation is analyzed and expanded, preparing a synthesis of the different			
	documentary sources.			

Personalized attention			
Methodologies	Description		
Workshop	Teachers will simultaneously monitor the group collectively with each student to ensure the correct evolution of the individual		
Supervised projects	project process. The needs of the students related to the study and / or topics related to the subject will be attended, providing		
Student portfolio	guidance, support and motivation in the teaching / learning process.		

Assessment				
Methodologies	Competencies /	Description	Qualification	
	Results			
Supervised projects	A38 A45 B1 B3 B4 B5	The elaboration of practical works related to the contents of the subject will be	70	
	B12 B14 B16 B25	proposed.		
	B27 B32 B33 B34 C1	At the beginning of the semester, students will be notified of the number of		
	C3 C8	assignments, their characteristics and the corresponding delivery dates.		
Student portfolio	A45 B1 B3 B12 B14	This section considers the monitoring of data collection and information management	10	
	B25 B27 B33 B34 C1	concerning the student work, as well as the active participation of students in the		
	C3 C8	practices / activities carried out in the course.		

ICT practicals	A38 A45 B1 B4 B5	Practices will be developed that demonstrate the use of the digital tools of the course.	10
	B12 B14 B16 B25		
	B33 B34 C3 C8		
Objective test	A38 A45 B1 B3 B4 B5	Necessary tests will be performed in order to adequately assess the degree of	10
	B12 B16 B31 B32 C3	assimilation of the conceptual and procedural contents of the subject. These tests may	
		have a varied format and adapted to the specific characteristics of the contents.	

## Assessment comments

For the evaluation of the subject, regular attendance is required for both lectures (THEORY) and interactive ones (PRACTICE) with a minimum of 80% attendance in each of them. Any incident related to attendance (family, work, etc.) must be reported to the teacher at the beginning of the semester or at the time it occurs.

The teaching method of the course Digital Graphic Tools for Building is based on Project-Based Learning (PBL), which will be evaluated by continuous assessment and with the obligation of active participation by students.

Each task will be done individually and will be considered PASSED those works that reach a minimum score of 5 out of 10. It is necessary to properly perform ALL the proposed work as well as proper follow-up in the practice class (workshop) and tutorials to pass the course.

In addition to the attendance, participation and carrying out of supervised work, tests may be carried out in order to adequately assess the degree of assimilation of the conceptual and procedural contents of the subject.

To pass the subject PER COURSE the student must submit ALL the work in the form and deadline indicated at the beginning of the semester and each of the work must be qualified as PASSED.

Students who do not pass the subject per course must submit the corresponding assignments on the date set for the First Assessment Opportunity (JUNE) or, where applicable, on the date set for the Second Assessment Opportunity (JULY). In these deliveries, the corresponding indications of the teacher responsible for the subject MUST be followed.

In order to be evaluated in the First and Second Opportunity, it is considered MANDATORY to follow up the work to be delivered, with the student being responsible for active participation in the teacher's supervision.

IMPORTANT: The student who is in any of the following circumstances will have the condition of NOT PRESENTED:- One who does not meet the required minimum attendance.- One that does not deliver on time and forms any of the tasks. It will not be allowed to complete or modify the works after the delivery dates.
